Recent Advances in Chemical Information H. Collier,1993

Recent Advances in Density Functional Methods Delano Pun Chong,1995 Of all the different areas in computational chemistry density functional theory DFT enjoys the most rapid development Even at the level of the local density approximation LDA which is computationally less demanding DFT can usually provide better answers than Hartree Fock formalism for large systems such as clusters and solids For atoms and molecules the results from DFT often rival those obtained by ab initio quantum chemistry partly because larger basis sets can be used Such encouraging results have in turn stimulated workers to further investigate the formal theory as well as the computational methodology of DFT This Part II expands on the methodology and applications of DFT Some of the chapters report on the latest developments since the publication of Part I in 1995 while others extend the applications to wider range of molecules and their environments Together this and other recent review volumes on DFT show that DFT provides an efficient and accurate alternative to traditional quantum chemical methods Such demonstration should hopefully stimulate fruitful developments in formal theory better exchange correlation functionals and linear scaling methodology

chemotypes was formerly offered by the natural products namely the alkaloids the terpenes the vitamins and hormones as well as the pigments of the animal and plant kingdoms albeit the chemical arrangements of the antibiotic molecules appeared much more surprising and diverse to the admiring eyes of cultivated organic chemists The idea of this book certainly a landmark in the field came during the Symposium of EUCHEM on Chemical Synthesis of Antibiotics that was held at Aussois in Savoy France May 2 6 1988 the initiative being taken by Gabor Lukacs to whom Masaji Ohno readily associated as a co editor

Advances in Chemical Conversions for Mitigating Carbon Dioxide T. Inui, M. Anpo, K. Izui, S. Yanagida, T. Yamaguchi, 1998-03-12 Global environmental problems especially global warming caused by the accelerative accumulation of carbon dioxide in the atmosphere are of great importance for humans The world's population is now approaching 6 billion and is still increasing Developments in communication systems and transportation tools have made the circulation of information technologies and materials easier which results in rapid economic growth particularly in the East and Southeastern Asian countries Increased affluence leads to an increased consumption of fossil fuels Inevitably this leads to an increase in carbon dioxide emission and environmentally hazardous materials which in turn precipitates climatic changes on a global scale Recent studies showed that the increase in carbon dioxide emission for last year was the highest in the past seven years and the total amount of carbon dioxide emission from all over the world reached 65 billion tons Furthermore one cannot overlook the report which appeared recently in Nature that the floor area of the iceberg in the South Pole has already decreased by 25% in the past five decades Over 260 scientists and engineers from 21 countries who had a strong interest and wished to contribute to solve the carbon dioxide problem attended this conference The papers presented in this volume cover most of the possibilities of the chemical conversion of carbon dioxide
