Goodman, Samuel J. Purkis, Stuart R. Phinn, 2013-04-18 Remote sensing stands as the defining technology in our ability to monitor coral reefs as well as their biophysical properties and associated processes at regional to global scales With overwhelming evidence that much of Earth's reefs are in decline our need for large scale repeatable assessments of reefs has never been so great Fortunately the last two decades have seen a rapid expansion in the ability for remote sensing to map and monitor the coral reef ecosystem its overlying water column and surrounding environment Remote sensing is now a fundamental tool for the mapping monitoring and management of coral reef ecosystems Remote sensing offers repeatable quantitative assessments of habitat and environmental characteristics over spatially extensive areas As the multi disciplinary field of coral reef remote sensing continues to mature results demonstrate that the techniques and capabilities continue to improve New developments allow reef assessments and mapping to be performed with higher accuracy across greater spatial areas and with greater temporal frequency The increased level of information that remote sensing now makes available also allows more complex scientific questions to be addressed As defined for this book remote sensing includes the vast array of geospatial data collected from land water ship airborne and satellite platforms The book is organized by technology including visible and infrared sensing using photographic multispectral and hyperspectral instruments active sensing using light detection and ranging LiDAR acoustic sensing using ship autonomous underwater vehicle AUV and in water platforms and thermal and radar instruments Emphasis and Audience This book serves multiple roles It offers an overview of the current state of the art technologies for reef mapping provides detailed technical information for coral reef remote sensing specialists

imparts insight on the scientific questions that can be tackled using this technology and also includes a foundation for those new to reef remote sensing The individual sections of the book include introductory overviews of four main types of remotely sensed data used to study coral reefs followed by specific examples demonstrating practical applications of the different technologies being discussed Guidelines for selecting the most appropriate sensor for particular applications are provided including an overview of how to utilize remote sensing data as an effective tool in science and management The text is richly illustrated with examples of each sensing technology applied to a range of scientific monitoring and management questions in reefs around the world As such the book is broadly accessible to a general audience as well as students managers remote sensing specialists and anyone else working with coral reef ecosystems **Deep-Sea Mining** Rahul Sharma,2017-03-28

This comprehensive book contains contributions from specialists who provide a complete status update along with outstanding issues encompassing different topics related to deep sea mining Interest in exploration and exploitation of deep sea minerals is seeing a revival due to diminishing grades and increasing costs of processing of terrestrial minerals as well as availability of several strategic metals in seabed mineral resources it therefore becomes imperative to take stock of various issues related to deep sea mining The authors are experienced scientists and engineers from around the globe developing advanced technologies for mining and metallurgical extraction as well as performing deep sea exploration for several decades They invite readers to learn about the resource potential of different deep sea minerals design considerations and development of mining systems and the potential environmental impacts of mining in international waters Economic

Geology of Natural Gas Hydrate Michael D. Max,Arthur H. Johnson,William P. Dillon,2006-07-09 This book is a companion to Natural Gas Hydrate in Oceanic and Permafrost Environments Max 2000 2003 which is the first book on gas hydrate in this series Although other gases can naturally form clathrate hydrates referred to after as hydrate we are concerned here only with hydrocarbon gases that form hydrates The most important of these natural gases is methane Whereas the first book is a general introduction to the subject of natural gas hydrate this book focuses on the geology and geochemical controls of gas hydrate development and on gas extraction from naturally occurring hydrocarbon hydrates This is the first broad treatment of gas hydrate as a natural resource within an economic geological framework This book is written mainly to stand alone for brevity and to minimize duplication Information in Max 2000 2003 should also be consulted for completeness Hydrate is a type of clathrate Sloan 1998 that is formed from a cage structure of water molecules in which gas molecules occupying void sites within the cages stabilize the structure through van der Waals or hydrogen bonding Recent Advances in Freshwater

Crustacean Biodiversity and Conservation Tadashi Kawai,D. Christopher Rogers,2021-03-08 Recent Advances in Freshwater Crustacean Biodiversity and Conservation focuses on minor crustacean groups and regionally endemic groups all from freshwaters Chapters in this book cover crustaceans such as Maxillopods Mysids Cumaceans Isopods Amphipods Branchiopods Copepods and Decapods Each looks at global or regional fauna and discusses conservation issues for that

group The majority of the chapters are based on papers presented at symposia organized by the editors at two international scientific meetings held in Barcelona and Washington DC The contributors are world renowned experts on their groups as well as on freshwater crustacean conservation and biodiversity at global levels It has previously been difficult for conservation managers NGOs and university professors and students who may not have access to comprehensive journal subscriptions to find relevant information on diversity and conservation of freshwater crustaceans This book meets that need addressing crustacean groups not previously treated and providing additional information beyond any presented in existing books As the editors write in their introduction we cannot conserve and we cannot protect what we do not know exists This is a reliable cutting edge reference for anybody involved in crustacean research students researchers agencies and NGOs as well as science educators conservationists and government conservation policymakers The book will also be useful for those working in aquaculture and fisheries given that many of the taxa discussed are economically important

Remote Sensing of Aquatic Coastal Ecosystem Processes Laurie L. Richardson, Ellsworth F. LeDrew, 2006-02-02 The aquatic coastal zone is one of the most challenging targets for environmental remote sensing Properties such as bottom reflectance spectrally diverse suspended sediments and phytoplankton communities diverse benthic communities and transient events that affect surface reflectance coastal blooms runoff etc all combine to produce an optical complexity not seen in terrestrial or open ocean systems Despite this complexity remote sensing is proving to be an invaluable tool for Case 2 waters This book presents recent advances in coastal remote sensing with an emphasis on applied science and management Case studies of the operational use of remote sensing in ecosystem studies monitoring and interfacing remote sensing science management are presented Spectral signatures of phytoplankton and suspended sediments are discussed in detail with accompanying discussion of why blue water Case 1 algorithms cannot be applied to Case 2 waters Audience This book is targeted for scientists and managers interested in using remote sensing in the study or management of aquatic coastal environments With only limited discussion of optics and theory presented in the book such researchers might benefit from the detailed presentations of aquatic spectral signatures and to operational management issues While not specifically written for remote sensing scientists it will prove to be a useful reference for this community for the current status of aquatic coastal remote sensing

New Frontiers in Marine Tourism Brian Garrod, Stefan Gössling, 2008 Diving tourism has seen such growth in the past decade that the World Tourism Organization suggests it will soon become as important as ski tourism According to a WTO estimate there are now 5.7 million active certified divers in the world Despite its development as a mass tourism activity its dynamic growth and great economic importance particularly for island destinations in the tropics surprisingly few scientific publications address this form of special interest tourism In the light of this New Frontiers in Marine Tourism is the first attempt to describe and analyse this tourism sector comprehensively The first part of the book is devoted to an overview of the dive sector addressing different types of diving locations and their particular characteristics the geographical distribution of dive locations the origins of dive tourists as well as the growth and economic significance of diving tourism in destinations worldwide In its second section the book outlines different motivations and typologies of diving tourists their learning behaviour knowledge of marine environments and their interaction with flora and fauna The third section focuses on diver satisfaction attitudes and preferences diver education and interpretation compliance with regulations by divers and tour operators environmental impacts and aspects of risk and health thus highlighting a variety of pressing topics related to the management of diving tourism First book of its kind to address the rapidly growing area of diving tourism Contributions from academic experts in the field it addresses hot issues such as environmental impacts health and safety education and economic factors and impacts Brilliantly edited it represents a coherent and cohesive collection of critically important issues in this area

Operational Oceanography in the 21st Century Andreas Schiller, Gary B. Brassington, 2011-04-11 Over the past decade the significant advances in real time ocean observing systems ocean modelling ocean data assimilation and super computing has seen the development and implementation of operational ocean forecast systems of the global ocean At the conclusion of the Global Ocean Data Assimilation Experiment GODAE in 2008 ocean analysis and forecasting services were being supported by 12 international centres This book is about ocean forecasting a maturing field which remains an active area of research and includes such topics as ocean predictability observing system design high resolution ocean modelling and ocean data assimilation It presents the introduction to ocean forecasting which provides a foundation for new opportunities in areas of coupled bio geochemical forecasting and coupled

Studies, Commission on Geosciences, Environment and Resources, Ocean Studies Board, 2000-01-03 This book describes the development of ocean sciences over the past 50 years highlighting the contributions of the National Science Foundation NSF to the field's progress Many of the individuals who participated in the exciting discoveries in biological oceanography chemical oceanography physical oceanography and marine geology and geophysics describe in the book how the discoveries were made possible by combinations of insightful individuals new technology and in some cases serendipity In addition to describing the advance of ocean science the book examines the institutional structures and technology that made the advances possible and presents visions of the field's future This book is the first ever documentation of the history of NSF's Division of Ocean Sciences how the structure of the division evolved to its present form and the individuals who have been responsible for ocean sciences at NSF as rotators and career staff over the past 50 years **Use of Genetically Improved**

and Alien Species for Aquaculture and Conservation of Aquatic Biodiversity in Africa Modadugu V. Gupta, Devin M. Bartley, Belen O. Acosta, 2004 **Encyclopedia of Modern Coral Reefs** David Hopley, 2010-11-26 Coral reefs are the

largest landforms built by plants and animals Their study therefore incorporates a wide range of disciplines This encyclopedia approaches coral reefs from an earth science perspective concentrating especially on modern reefs Currently coral reefs are under high stress most prominently from climate change with changes to water temperature sea level and ocean acidification particularly damaging Modern reefs have evolved through the massive environmental changes of the Quaternary with long periods of exposure during glacially lowered sea level periods and short periods of interglacial growth The entries in this encyclopedia condense the large amount of work carried out since Charles Darwin first attempted to understand reef evolution Leading authorities from many countries have contributed to the entries covering areas of geology geography and ecology providing comprehensive access to the most up to date research on the structure form and processes operating on Quaternary coral reefs **Jellyfish Blooms: Causes, Consequences and Recent Advances** Kylie A.

Pitt, Jennifer E. Purcell, 2009-03-31 Jellyfish form spectacular population blooms and there is compelling evidence that jellyfish blooms are becoming more frequent and widespread Blooms have enormous ecological economic and social impacts

For example they have been implicated in the decline of commercial fisheries they block the cooling water intakes of coastal industries and ships and reduce the amenity of coastal waters for tourists Blooms may be caused by overfishing climate change and coastal pollution which all affect coastal waters around the world Jellyfish Blooms Causes Consequences and Recent Advances presents reviews and original research articles written by the world s leading experts on jellyfish Topics covered include the evolution of jellyfish blooms the impacts of climate change on jellyfish populations advances in acoustic and molecular methods used to study jellyfish the role of jellyfish in food webs and nutrient cycles and the ecology of the benthic stages of the jellyfish life history This is a valuable resource for students and professional marine biologists fisheries scientists oceanographers and researchers of climate change
