Recent Progress in Atherosclerosis Research E. Vollmer,A. Roessner,2012-12-06 This monograph on recent progress in atherosclerosis research presents state of the art morphological investigations on the cells and their metabolism in the atherosclerotic plaque in situ The spectrum of methods includes immunohistologic and immunoelectron microscopic investigations on the localization of apolipoproteins in the cells of the arterial intima presenting new data on the lipoprotein metabolism in plaque The collagen metabolism is analysed by in situ hybridization techniques for demonstrating the synthesis of different collagen types on the messenger RNA level Concentrating on in situ investigations with sophisticated morphological methods the widespread discussion on atherogenesis is focused on the arterial wall and its morphological alterations As morphology remains the basis for understanding the pathogenesis of disease the results presented here could be of interest not only to pathologists but also to clinicians and researchers working in the field of biology of atherosclerosis

Stroke Genetics Hugh S. Markus, 2003 Stroke is a major cause of death and the major cause of adult neurological disability in most of the world Despite its importance on a population basis research into the genetics of stroke has lagged behind that of many other disorders However the situation is now changing An increasing number of single gene disorders causing stroke are being described and there is growing evidence that polygenic factors are important in the risk of apparently sporadic stroke *Stroke Genetics* provides an up to date review of the area suitable for clinicians treating stroke patients and both clinical and non clinical researchers in the field of cerebrovascular disease The full range of monogenic stroke disorders causing cerebrovascular disease including ischaemic stroke intracerebral haemorrhage aneurysms and arteriovenous malformations are covered For each clinical features diagnosis and genetics are described Increasing evidence suggest that genetic factors are also important for the much more common multifactorial stroke this evidence is reviewed along with the results of genetic studies in this area Optimal and novel strategies for investigating multifactorial stroke including the use of intermediate phenotypes such as intima media thickness and MRI detected small vessel disease are reviewed The book concludes by describing a practical approach to investigating patients with stroke for underlying genetic disorders Also included is a list of useful websites
