Recent Progress In Medicinal Plants Vol 10 Phytotherapeutics:

Recent Progress in Medicinal Plants J. N. Govil, V. K. Singh, 2002-01-01 *Medicinal Plants and Fungi: Recent Advances in Research and Development* Dinesh Chandra Agrawal, Hsin-Sheng Tsay, Lie-Fen Shyur, Yang-Chang Wu, Sheng-Yang Wang, 2017-11-03 This book highlights the latest international research on different aspects of medicinal plants and fungi. Studies over the last decade have demonstrated that bioactive compounds isolated from medicinal fungi have promising antitumor, cardiovascular, immunomodulatory, anti-allergic, anti-diabetic, and hepatoprotective properties. In the light of these studies, the book includes chapters mostly reviewing articles by eminent researchers from twelve countries across the globe working in different disciplines of medicinal plants and fungi. It discusses topics such as the prevention of major neurodegenerative and neurotoxic mechanisms by *Centella asiatica*, the medicinal properties and therapeutic applications of several mushrooms species found in different parts of the world, and fungal endophytes as a source of bioactive metabolites including anticancer and cardioprotective agents. There are also chapters on strategies for identifying bioactive secondary metabolites of fungal origin, the use of genomic information to explore the biotechnological potential of medicinal mushrooms, and solid state fermentation of agro-industrial and forestry residues for the production of medicinal mushrooms. It is a valuable resource for the researchers, professionals, and students working in the area of medicinal plants and fungi.

Phytohormones: A Window to Metabolism, Signaling and Biotechnological Applications Lam-Son Phan Tran, Sikander Pal, 2014-04-01 Abiotic and biotic stresses adversely affect plant growth and productivity. The phytohormones regulate key physiological events under normal and stressful conditions for plant development. Accumulative research efforts have discovered important roles of phytohormones and their interactions in regulation of plant adaptation to numerous stressors. Intensive molecular studies have elucidated various plant hormonal pathways, each of which consists of many signaling components that link a specific hormone perception to the regulation of downstream genes. Signal transduction pathways of auxin, abscisic acid, cytokinins, gibberellins, and ethylene have been thoroughly investigated. More recently, emerging signaling pathways of brassinosteroids, jasmonates, salicylic acid, and strigolactones offer an exciting gateway for understanding their multiple roles in plant physiological processes. At the molecular level, phytohormonal crosstalks can be antagonistic or synergistic or additive in actions. Additionally, the signal transduction components of one hormonal pathway may interplay with the signaling components of other hormonal pathways. Together, these and other research findings have revolutionized the concept of phytohormonal studies in plants. Importantly, genetic engineering now enables plant biologists to manipulate the signaling pathways of plant hormones for development of crop varieties with improved yield and stress tolerance. This book, written by internationally recognized scholars from various countries, represents the state of the art understanding of plant hormones, biology, signal transduction, and implications. Aimed at a wide range of readers including researchers, students, teachers, and many others who have interests in this flourishing research field, every section is concluded with

biotechnological strategies to modulate hormone contents or signal transduction pathways and crosstalk that enable us to develop crops in a sustainable manner Given the important physiological implications of plant hormones in stressful environments our book is finalized with chapters on phytohormonal crosstalks under abiotic and biotic stresses **Recent Progress in Medicinal Plants: Crop Improvement, Production Technology, Trade and Commerce** V. K. Singh, 2002 **Herbs, Spices, and Medicinal Plants** Lyle E. Craker, James E. Simon, 1990-02-01 As in previous volumes readers will find a multidisciplinary forum for communicating knowledge related to the botany horticulture and pharmacology of herbs spices and medicinal plants While magical and mystical powers have been associated with these plants through the ages continued investigations in such areas as production nomenclature uses chemical constitution and dynamics help elucidate the affiliated chemical and physical processes that contribute to their unique flavor fragrance pharmacological and other bioactive properties This collection of articles examines the potential of natural products as pesticides the richness of the Chinese Pharmacopeia the similarities of Eastern Asian and Eastern North American medicinal plants the use of borage as a source of gamma linolenic acid and the botanical nomenclature of medicinal plants **Medicinal Plants - Recent Advances in Research and Development** Hsin-Sheng Tsay, Lie-Fen Shyur, Dinesh Chandra Agrawal, Yang-Chang Wu, Sheng-Yang Wang, 2016-10-25 Since ancient times plants have been used as a prime natural source of alternative medicines and have played an important role in our lives The old tradition of medicinal plant application has turned into a highly profitable business in the global market resulting in the release of a large number of herbal products People have tried to find different sources of medicines to alleviate pain and cure different illnesses Due to severe constraints of synthetic drugs and the increasing contraindications of their usage there is a growing interest world over in the usage of natural products based on medicinal herbs hence there is an ever expanding market of herbs and herbal based medicinal preparations all over the world This has culminated into an exponential increase in number of research groups in different geographical locations and generation of volume of research data in the field in a short span of time The path breaking advancement in research methods and interdisciplinary approaches is giving birth to newer perspectives Therefore it becomes imperative to keep pace with the advancement in research and development in the field of medicinal herbs There are a large number of researchers in different parts of the world working on various aspects of medicinal plants and herbal medicines The idea is to bring their recent research work into light in the form of a book The proposed book contains chapters by the eminent researchers in different countries and working with different disciplines of medicinal plants Articles pertain to different disciplines such as 1 Resources and conservation of medicinal plants 2 Biosynthesis and metabolic engineering of medicinal plants 3 Tissue culture propagation and bioreactor technology of medicinal plants 4 Phytochemical research on medicinal plants 5 Herbal medicines and plant derived agents in cancer prevention and therapy 6 Herbal medicines and plant derived agents in metabolic syndrome management 7 Herbal medicines and plant derived agents in modulation of immune related disorders 8
