Snedden, William E. Galloway, 2019-11-30 The Gulf of Mexico Basin is one of the most prolific hydrocarbon producing basins in the world with an estimated endowment of 200 billion barrels of oil equivalent This book provides a comprehensive overview of the basin spanning the US Mexico and Cuba Topics covered include conventional and unconventional reservoirs source rocks and associated tectonics basin evolution from the Mesozoic to Cenozoic Era and different regions of the basin from mature onshore fields to deep water subsalt plays Cores well logs and seismic lines are all discussed providing local regional and basin scale insights The scientific implications of seminal events in the basin s history are also covered including sedimentary effects of the Chicxulub Impact Containing over 200 color illustrations and 50 stratigraphic cross sections and paleogeographic maps this is an invaluable resource for petroleum industry professionals as well as graduate students and researchers interested in basin analysis sedimentology stratigraphy tectonics and petroleum geology      **Deltaic Sedimentation Modern and Ancient** James P. **Geological Survey Professional Paper**, 1982      Alabama Coastal Region Ecological Characterization Patrick E. O'Neil, 1982      *The Archaeology of Maritime Landscapes* Ben Ford, 2011-05-21 Maritime cultural landscapes are collections of submerged archaeological sites or combinations of terrestrial and submerged sites that reflect the relationship between humans and the water These landscapes can range in size from a single beach to an entire coastline and can include areas of terrestrial sites now inundated as well as underwater sites that are now desiccated However what binds all of these sites together is the premise that each aspect of the landscape cultural political environmental technological and physical is interrelated and can not be understood without reference to the others In this maritime cultural landscape approach individual sites are treated as features within the larger landscape and the interpretation of single sites add to a larger analysis of a region or culture This approach provides physical and theoretical links between terrestrial and underwater archaeology as well as prehistoric and historic archaeology consequently providing a framework for integrating such diverse topics as trade resource procurement habitation industrial production and warfare into a holistic study of the past Landscape studies foster broader perspectives and approaches extending the study of maritime cultures beyond the shoreline Despite this potential the archaeological study of maritime landscapes is a relatively untried approach with many questions regarding the methods and perspectives needed to effectively analyze these landscapes The chapters in this volume which include

contributions from the United States the United Kingdom Norway and Australia address many of the theoretical and methodological questions surrounding maritime cultural landscapes The authors comprise established scholars as well as archaeologists at the beginning of their careers providing a healthy balance of experience and innovation The chapters also demonstrate parity between method and theory where the varying interpretations of culture and space are given equal weight with the challenges of investigating both wet and dry sites across large areas

*Sand and Sandstone* F. J. Pettijohn,P. E. Potter,R. Siever,2012-12-06 This book is the outgrowth of a week long conference on sandstone organized by the authors first held at Banff Alberta in 1964 under the auspices of the Alberta Association of Petroleum Geologists and the University of Alberta and again in 1965 at Bloomington Indiana under the sponsorship of the Indiana Geological Survey and the Department of Geology Indiana University A 2 page syllabus was prepared for the second conference and published by the Indiana Geological Survey Continuing interest in and demand for the syllabus prompted us to update and expand its contents The result is this book We hope this work will be useful as a text or supplementary text for advanced undergraduate and graduate courses in sedimentation sedimentary petrology or general petrology and perhaps will be helpful to the teachers of such courses Though we have focussed on sandstones we have necessarily included much of interest to students of all sediments We hope also that it will be a useful reference work for the professional geologist especially those concerned with petroleum ground water and economic geology either in industry or government Because the subject is so closely tied to surface processes it may also be of interest to geo morphologists and engineers who deal with beaches and rivers where sand is in transit

**Coastal Sedimentary Environments** R.A. Jr. Davis,2012-12-06

Richard A Davis The zone where land and sea meet is composed of a variety of complex environments The coastal areas of the world contain a large percentage of its population and are therefore of extreme economic importance Industrial residential and recreational developments as well as large urban complexes occupy much of the coastal margin of most highly developed countries Undoubtedly future expansion in many undeveloped maritime countries will also be concentrated on coastal areas Accompanying our occupation of coasts in this age of technology is a dependence on coastal environments for transportation food water defense and recreation In order to utilize the coastal zone to its capacity and yet not plunder its resources we must have extensive knowledge of the complex environments contained along the coasts The many environments within the coastal zone include bays estuaries deltas marshes dunes and beaches A tremendously broad range of conditions is represented by these environments Salinity may range from essentially fresh water in estuaries such as along the east coast of the United States to extreme hypersaline lagoons such as Laguna Madre in Texas Coastal environments may be in excess of a hundred meters deep fjords or may extend several meters above sea level in the form of dunes Some coastal

environments are well protected and are not subjected to high physical energy except for occasional storms whereas beaches and tidal inlets are continuously modified by waves and currents

Habitats and Biota of the Gulf of Mexico: Before the Deepwater Horizon Oil Spill C. Herb Ward, 2017-06-26 This book is open access under a CC BY NC 2.5 license The Gulf of Mexico is an open and dynamic marine ecosystem rich in natural resources but heavily impacted by human activities including agricultural industrial commercial and coastal development The Gulf of Mexico has been continuously exposed to petroleum hydrocarbons for millions of years from natural oil and gas seeps on the sea floor and more recently from oil drilling and production activities located in the water near and far from shore Major accidental oil spills in the Gulf are infrequent two of the most significant include the Ixtoc I blowout in the Bay of Campeche in 1979 and the Deepwater Horizon Oil Spill in 2010 Unfortunately baseline assessments of the status of habitats and biota in the Gulf of Mexico before these spills either were not available or the data had not been systematically compiled in a way that would help scientists assess the potential short term and long term effects of such events This 2 volume series compiles and summarizes thousands of data sets showing the status of habitats and biota in the Gulf of Mexico before the Deepwater Horizon Oil Spill Volume 1 covers water and sediment quality and contaminants in the Gulf natural oil and gas seeps in the Gulf of Mexico coastal habitats including flora and fauna and coastal geology offshore benthos and plankton with an analysis of current knowledge on energy capture and energy flows in the Gulf and shellfish and finfish resources that provide the basis for commercial and recreational fisheries
