Recent Trends In Regeneration Research:

Recent Trends in Regeneration Research V. Kiortsis, S. Koussoulakos, H. Wallace, 2012-12-06 Regeneration i.e the replacement of lost body parts by new outgrowths or by remodelling existing tissues has been studied for centuries However in recent years important developments took place in this field too owing to new sophisticated techniques and to novel theoretical concepts Advances in Molecular Genetics Biochemistry Cell and Neurobiology Immunology to mention a few of them are the main causes of this resurgence of interest in regeneration As a consequence more and more meetings and publications are devoted either exclusively or for a large part to basic and applied research of regenerative processes Regeneration is scattered in laboratories all over the world and accustomed to know each other through exchange of reprints occasionally an encounter in a large conference tend now to form small groups even societies and to institutionalize their meetings Although the critical mass of scientists involved in regeneration research does not seem yet to be reached for an autonomous development of this sector regular and frequent meetings of experts appear useful even necessary Such a meeting was convened in Saronis near Athens Greece from 19 to 23 September 1988 and sponsored by the NATO Science Committee and the University of Athens The present volume contains the contributions to this Advanced Research Workshop on Recent Trends in Regeneration Research About 50 biologists from different countries either members of the Alliance or outside it U R S S India Egypt Switzerland Sweden took part mostly as invited speakers

Advances in Regenerative Medicine: Role of Nanotechnology, and Engineering Principles Venkatram Prasad Shastri, George Altankov, Andreas Lendlein, 2010-08-14 This book summarizes the NATO Advanced Research Workshop ARW on Nanoengineered Systems for Regenerative Medicine that was organized under the auspices of the NATO Security through Science Program I would like to thank NATO for supporting this workshop via a grant to the co-directors The objective of ARW was to explore the various facets of regenerative medicine and to highlight role of the nano length scale and nano scale systems in defining and controlling cell and tissue environments The development of novel tissue regenerative strategies require the integration of new insights emerging from studies of cell matrix interactions cellular signalling processes developmental and systems biology into biomaterials design via a systems approach The chapters in the book written by the leading experts in their respective disciplines cover a wide spectrum of topics ranging from stem cell biology developmental biology cell matrix interactions and matrix biology to surface science materials processing and drug delivery We hope the contents of the book will provoke the readership into developing regenerative medicine paradigms that combine these facets into clinically translatable solutions This NATO meeting would not have been successful without the timely help of Dr Ulrike Shastri Sanjeet Rangarajan and Ms Sabine Benner who assisted in the organization and implementation of various elements of this meeting Thanks are also due Dr Fausto Pedrazzini and Ms Alison Trapp at NATO HQ Brussels Belgium The commitment and persistence of Ms
