Receptor Subunits And Complexes:

Receptor Subunits and Complexes A. Burgen, E. A. Barnard, 1992-06-18 This volume provides a wide ranging review of the variety and specificity of receptors including those for neurotransmitters hormones growth factors oncogenes and antigens and looks in depth at the fundamental features of multi subunit complexes and their vital role in coordinating and controlling the functions of the body These receptors for hormones and drugs are mostly constituted from protein subunits They may be organised as ligand operated ion channels in a cell membrane or they may be concerned with enzyme activation to generate second messengers or DNA transcription following a change in the association disassociation state of the receptor complex Advances at the molecular level have enabled scientists to relate the structure of these receptor subunits to their specific mode of action and their function and this in turn is leading the way forward to exciting new research with important medical consequences for the treatment of disease The fourteen chapters in this volume summarise these advances across a wide range of disciplines and the resulting publication will therefore be of interest to research scientists in endocrinology immunology pharmacology oncology and neurobiology

Current Topics in Membranes and Transport, 1990-08-10 **Current Topics in Membranes and Transport Addictions** David Belin, 2012-10-19 Addiction increasingly perceived as a heterogeneous brain disorder is one of the most peculiar psychiatric pathologies in that its management involves various often non overlapping resources from the biological psychological medical economical social and legal realms Despite extensive efforts from the players of these various fields to date there are no reliably effective treatments of addiction This may stem from a lack of understanding of the etiology and pathophysiology of this disorder as well as from the lack of interest into the potential differences among patients in the way they interact compulsively with their drug This book offers an overview of the psychobiology of addiction and its current management strategies from pharmacological social behavioural and psychiatric points of view *Signal Transduction in Mast Cells and Basophils* Ehud Razin, Juan Rivera, 2012-12-06 Mast cells and basophils are responsible for inflammatory and allergic reactions As such the signals that generate these responses and how their pathways of action work are the focus of much present day research into allergy and inflammation This book focuses primarily on the molecular mechanisms that govern mast cell and basophil cell biology and function as well as providing a comprehensive summary of the field of signal transduction and also giving insights into areas that have therapeutic potential The book provides detailed insights into mast cell and basophil growth and development their activation by allergens including details of receptor activation and downstream events and the regulators of morphology and degranulation The metabolic pathways involved in prostaglandin and leukotriene production are discussed as is the role of transcription factors in mast cell growth and cytokine production Written by leaders in the field this volume will provide the reader with an up to date account of a topic where the rapid progress makes conventional information gathering difficult The truth in complexes: why unraveling ion channel multi-protein signaling nexuses is

critical for understanding the function of the nervous system Leigh Anne Swayne, Christophe Altier, Gerald W. Zamponi, 2015-04-15 In the search for simple explanations of the natural world its complicated textures are often filed down to a smoothened surface of our liking The impetus for this Research Topic was borne out of a need to re ignite interest in the complex in this case in the context of ion channels in the nervous system Ion channels are the large proteins that form regulated pores in the membranes of cells and in the brain are essential for the transfer processing and storage of information These pores full of twists and turns themselves are not just barren bridges into cells More and more we are beginning to understand that ion channels are like bustling medieval bridges packed with apartments and shops rather than the more sleek modern variety they are dynamic hubs connected with many structures facilitating associated activities Our understanding of these networks continues to expand as our investigative tools advance Together these articles highlight how the complexity of ion channel signaling nexuses is critical to the proper functioning of the nervous system

GPCR Signalling Complexes - Synthesis, Assembly, Trafficking and Specificity Denis J. Dupré, Terence E. Hébert, Ralf Jockers, 2012-11-19 Main Question G protein coupled receptors are involved in highly efficient and specific activation of signalling pathways How do GPCR signalling complexes get assembled to generate such specificity In order to answer this question we need to understand how receptors and their signalling partners are synthesized folded and quality controlled in order to generate functional proteins Then we need to understand how each partner of the signalling complex is selected to join a complex and what makes this assembly possible GPCRs are known to be able to function as oligomers what drives the assembly into oligomers and what will be the effects of such organization on specificity and efficacy of signal transduction Once the receptor complexes are assembled they need to reach different locations in the cell what drives and controls the trafficking of GPCR signalling complexes Finally defects in synthesis maturation or trafficking can alter functionality of GPCRs signalling complexes how can we manipulate the system to make it function normally again Pharmacological
