Receptor Specific Proteins Plant And Animal Lectins:

Animal Lectins Gerardo R. Vasta PhD, Hafiz Ahmed PhD, 2008-10-09 Introduces Groundbreaking Approaches for Assessing Lectin Function Lectins and their ligands are under quite a heavy microscope due to their potential applications to pharmacology immunology cancer therapy and agriculture With growing interest in the glycobiology field the body of research related to lectin roles has grown at an explosive rate Receptor-specific Proteins Edwin Richard Gold, Peter Balding, 1975 *Essentials of Glycobiology* Ajit Varki, 1999-01-01 Glycobiology has its roots in the nineteenth century when chemists first began to analyze sugar and polysaccharides Advances in this area continued at a steady rate during most of this century but the past 20 years has witnessed an unparalleled explosion of new knowledge that has transformed the field This monograph contains the basic information needed to understand the field of glycobiology along with the most current work at the forefront of the field Plant Lectins A. Pusztai, 2008-05-29 This volume surveys the chemistry biochemistry biosynthesis metabolism and pharmacological properties of lectins After a chemically orientated first chapter dealing with specificity and a second chapter on structure in the rest of the book lectins are looked at from a biological point of view Their involvement in metabolism and biosynthesis the distribution and localization in plant tissues and their role in interactions with the outside world are discussed in chapters 3 and 4 The last two chapters deal with the effects of lectins on various cells of the body including blood gut and nerve cells with particular emphasis on medical nutritional and general biological aspects

The Sugar Code Hans-Joachim Gabius, 2011-09-19 A reader friendly overview of the structure and functional relevance of natural glycosylation and its cognate proteins lectins this book is also one of the few books to cover their role in health and disease Edited by one of the pioneering experts in the field and written by a team of renowned researchers this resource is a perfect introduction for all students in life and medical sciences biochemistry chemistry and pharmacy Website WWW WILEY VCH DE HOME THESUGARCODE **Lectin-Microorganism Interactions** R. Doyle, 1994-02-08 Provides in depth coverage of lectins and their interactions with micro organisms and demonstrates how lectins function as probes for viral bacterial fungal and protozoal surfaces as well as for blood group antigens Lectins Nathan Sharon, H. Lis, 2007-10 This Second Edition brings readers up to date with all the latest findings in lectin research Throughout this new edition more than 200 figures and some thirty tables help readers visualize and understand key concepts and processes The book starts with an overview of lectin research followed by a survey of the occurrence of lectins in nature Other areas covered include the nutritional effects of lectins and their functions in nature Molecular Biology of the Cell , 2002 **Immune and Receptor Assays in Theory and Practice** Patrick Englebienne, 1999-12-28 In the past ten years employment of immuno and receptor assays has grown dramatically Now used in the pharmaceutical industry for automated screening programs in the agro food industry for on line processing control and food adulteration detection and in clinical laboratories they are fully integrated analytical tools However the literature often covers only one type of assay or just one of the many systems available Immune

and Receptor Assays in Theory and Practice gathers and organizes the available information to help you establish the best assay for your application This composite presents the fundamentals of both techniques and introduces practical examples of equation use antibody and receptor purification antigen labeling immunization and establishment of antibodies for long term storage It contrasts the many different assay designs and addresses market trends as the context for developing immuno assay goals In addition this volume summarizes the biochemical and physical properties involved in antibody and receptor ligand interactions and reagent manufacture This is the first single volume synthesis of both immuno and receptor assays With theoretical background and practical examples Immune and Receptor Assays in Theory and Practice allows you to base your experiment on proven techniques components and applications for the most reliable results Glycosciences

Hans-Joachim Gabius,Sigrun Gabius,2008-09-26 A comprehensive survey of the topic ranging from basic molecular research to clinical applications Critical reviews by leading experts in each field summarize the state of knowledge and discuss the anticipated benefits of novel approaches and strategies These include the impact of modern analysis techniques on glycobiology the use of synthetic neoglycoproteins or the clinical consequences of new insights into the physiological role of lectins and glycoconjugates in pathology oncology immunity neuroscience and reproduction medicine Throughout the aim is to separate realistic applications from mere hopes *Organization and Assembly of Plant and Animal Extracellular Matrix* W. Steven Adair,2012-12-02 Organization and Assembly of Plant and Animal Extracellular Matrix presents a state of the art view of some of the experimental systems in plant and animal matrix biology It discusses certain principles underlying establishment of complex three dimensional architecture cross broad evolutionary boundaries The opening chapter reviews studies on the cellular mechanisms responsible for storage release assembly and function of extracellular matrices during early sea urchin development The subsequent chapters describe the structure assembly disassembly and molecular biology of the Chlamydomonas reinhardtii cell wall The chapters also summarize the status of work on basement membrane assembly Important insights into approaches to identify critical molecular domains and the complexity of relating defined molecular associations to establishment of matrix architecture are provided A family of discovered cell wall genes that encode protein products containing up to 70% glycine is presented in Chapter 4 This is followed by a discussion on the role of alginate self assembly in cell wall formation in Fucus The book goes on to address the issue of protein carbohydrate recognition with a detailed discussion of plant and animal lectins Chapter 7 tackles a family of genes encoding higher plant hydroxyproline rich glycoproteins HRGPs and the relationship between the HRGP genes cloned and their products The final two chapters are devoted to one of the most important classes of protein modifying enzymes for extracellular matrix formation and function the prolyl hydroxylases This book will be of help to workers in plant and animal matrix in understanding information approaches and ideas that they may not normally encounter **Phylogenesis of Immune Functions** Gregory W.

Warr,Nicholas Cohen,2024-12-20 This volume discusses recent advances in research regarding the evolution of specific and

nonspecific defense responses in a taxonomically diverse array of species Topics regarding invertebrates include the protective mechanisms cellular and molecular employed by insects the protective roles of lectins and the self nonself discrimination revealed by tissue incompatibility reactions With vertebrates the evolution of the immunoglobulin related superfamily of recognition molecules including immunoglobulins and the major histocompatibility complex molecules is examined over several chapters Other topics reviewed include the evolution of nonimmunoglobulin mediators of defense e.g cytokines and eicosanoids lymphocyte subpopulations including effects of ambient temperature on function and the phylogenetic emergence of natural killer cells Phylogenesis of Immune Functions provides invaluable information for evolutionary biologists as well as all immunologists and other researchers interested in discovering how inhabitants in our increasingly threatened biosphere protect themselves against environmental pathogens and toxins

Contemporary Topics in Immunobiology John J. Marchalonis, 2012-12-06 The problem that virtually all cells have in discriminating between self and non self molecules and cells has been considered at great length in immunobiology However cells that clearly are incapable of carrying out mammalian type immune functions can exhibit exquisite specificity in their capacity to discriminate among syngeneic allogeneic and xenogeneic cells In this volume of Contemporary Topics in Immunobiology we have chosen to consider the general problem of self non self discrimination as it is manifest in recognition reactions of plants and invertebrates and in the evolutionary development of the immune response of vertebrates A broad many faceted approach is taken toward fundamental issues in immunobiology in order to develop innovative concepts of receptor function as well as to delineate traditional views The capacity of plants to discriminate between self and non self is addressed in Chapter 1 by R B Knox and Adrienne E Clarke These authors provide examples of cell cell recognition in plants that parallel those occurring in invertebrates and vertebrates In general tolerance acceptance of grafts is restricted to plants within closely related genera Recognition is mediated by callus cells which proliferate at wound surfaces in higher plants and there is a correlation between cell and tissue type and antigenic markers detectable with the use of mammalian antibodies Certain flowering plants exhibit precise discrimination in fertilization when pollen must be from the same species but fertilization occurs only if the pollen is genetically non self

Insect Immunity J.P.N. Pathak, 1993-08-31 Immunity in insects is different from immunity in vertebrates Insects lack immunoglobulins even though they are capable of reacting against foreign components with effective defense mechanism There has been a marked advancement in most of the fields of science in the past two decades Insect immunity is also one of them It is a developing subject which is now established as a new branch in insect study This treatise is an attempt to compile meaningful articles of leading workers in this field nevertheless we do not claim that leadership in insect immunity is by any means restricted to them The idea is to provide a vibrant description of various

aspects of Insect Immunity With the rapid development of the subject it is difficult for any one author to discuss all the aspects of an area in a limited number of pages even then they have done their utmost to include the entire development of the subject in their articles The treatise deals with insect haemocytes their population isolation and role in defense mechanism humoral encapsulation inducible humoral antibacterial immunity cellular immune reactions role of endocrines role of phenol oxidase system in cellular communication haemagglutinins and impact of parasite on insect immune system Some topics could not be covered because experts in those area though willing could not complete their commitment within time limits

Carbohydrate Recognition Binghe Wang, Geert-Jan Boons, 2011-09-06 This book contains contributions from interdisciplinary scientists to collectively address the issue of targeting carbohydrate recognition for the development of novel therapeutic and diagnostic agents The book covers 1 biological problems involving carbohydrate recognition 2 structural factors mediating carbohydrate recognition 3 design and synthesis of lectin mimics that recognize carbohydrate ligands with high specificity and affinity and 4 modulation of biological and pathological processes through carbohydrate recognition

Lectins Arpad Pusztai, Susan Bardocz, 2005-08-02 Lectins form a ubiquitous and important class of natural carbohydrate binding information proteins Although the main scientific interest was originally focussed on toxic lectins such as ricin recent emphasis has shifted to exploring their involvement in cell to cell communication and recognition in microorganisms plants and animals As knowledge of the basic properties and biological activities of lectins has increased exciting opportunities have arisen for the exploitation of some of the advantageous aspects of fundamental lectinology Lectins Biomedical Perspectives records the major achievements of an initiative funded by the European Community to coordinate lectin research throughout Europe
