**Structure-Based Drug Design for Diagnosis and Treatment of Neurological Diseases** Rona R. Ramsay, Giuseppe Di Giovanni, 2017-03-24 European Cooperation in Science and Technology (COST) supports the collaboration of nationally funded science and technology research through the creation of networks. COST is the longest running European framework enhancing cooperation among researchers, engineers, and scholars across Europe. The COST Action CM1103, *Structure based drug design for diagnosis and treatment of neurological diseases: dissecting and modulating complex function in the monoaminergic systems of the brain*, is a good example of the advances possible through interdisciplinary collaboration on difficult problems. COST Action CM1103 brought together 28 research groups from 18 countries to collaborate for four years on multi-target drug design for complex neuropathologies. The interdisciplinary expertise of the members spans the range from computational enzymology to human studies, providing outstanding opportunities for the interdisciplinary development of trainees, and is reflected in the articles in this e-book. This Research Topic covers progress in multi-target drug design for the complex neuropathologies of the monoamine system that are apparent, for example, in Alzheimer's disease. After a mini-review to introduce the topic of multi-target drug design, the other articles review the Research Topic from their own perspective: two from computational approaches, three from medicinal chemistry, two from molecular pharmacology, and two from studies in whole brain. This multi-faceted approach describes new compounds, new methodology, and advances in the basic science of understanding the brain. This E-book is based upon work from COST Action CM1103, *Structure based drug design for diagnosis and treatment of neurological diseases: dissecting and modulating complex function in the monoaminergic systems of the brain*, supported by COST. European Cooperation in Science and Technology (COST) is a pan-European intergovernmental framework. Its mission is to enable break-through scientific and technological developments.

leading to new concepts and products and thereby contribute to strengthening Europe's research and innovation capacities. It allows researchers, engineers and scholars to jointly develop their own ideas and take new initiatives across all fields of science and technology while promoting multi and interdisciplinary approaches. COST aims at fostering a better integration of less research intensive countries to the knowledge hubs of the European Research Area. The COST Association, an International not for profit Association under Belgian Law, integrates all management governing and administrative functions necessary for the operation of the framework. The COST Association has currently 36 Member Countries. [www.cost.eu](http://www.cost.eu)

**Arterial Treatment of Neurological Diseases** Shailendra Joshi, 2025-05-06 Drug delivery by injecting them through arteries poses unique challenges. The first attempts to treat malignant brain tumors by arterial injections were undertaken soon after World War II. Yet the applications of arterial delivery in treating neurological diseases have not advanced significantly over the last seventy years. Although arterial drug delivery is used to treat several neurological conditions, its applications other than for localization of brain functions remain experimental and are unproven in robust scientific studies. Over the last two decades, interventional radiology has significantly advanced by developing catheter-based devices, but arterial drug development has largely been ignored. This book makes the case for arterial drug development. Unless drugs are developed explicitly for arterial injections, the vast potential of arterial treatments of neurological diseases will remain untapped. This multi-author book brings together experienced researchers and clinicians to investigate various applications of arterial drug delivery for treating neurological diseases. It's an essential resource for various medical subspecialties related to the field and to advance pharmacological and clinical research with this mode of drug delivery.
