The Elementary Structures of Kinship Claude Levi-Strauss, 1971-06-30 Professor L vi Strauss's first major work *Les Structures élémentaires de la Parenté* has acquired a classic reputation since its original publication in 1949 and it has become the constant focus of academic debate about central theoretical concerns in social anthropology It is however a long and difficult book for many students to read in French and its arguments have consequently become known even among professional anthropologists largely through critical analysis It was republished in a revised French edition in 1967 with a new foreword by the author and it is this text with his further emendations that has been used in this translation L vi Strauss applies his intellectual powers to the perennial problem of incest which he elucidates by means of the concept of exchange as formulated by Marcel Mauss in his famous analysis of the gift *Essai sur le don* 1925 He distinguishes two elementary modes of exchange which govern not only the conventional variety of goods and services but also the transfer of women in marriage these are restricted and generalized exchange With a mass of ethnographic evidence he demonstrates how the formidable intricacy of marriage customs comprising moral and jural ideas and institutions which appear to be essentially arbitrary can be seen as local and historical rules of exchange Charles L vi Strauss traces these rules throughout a vast range of simple societies chiefly in Australia and mainland Southeast Asia but also in the Americas in Oceania and in other parts of the world To this survey he adds two extended sections on the great civilizations of China and India He continues with a briefer consideration of the passage from elementary to complex structures with particular reference to African societies and concludes with a stimulating chapter on the principles of kinship exchange as the universal basis for marriage prohibitions and the formal relations between the sexes as part of a universe of communication Although much of the work is technical consisting of detailed analyses of types of social organization with which social anthropologists will be most familiar it also contains much that will be of interest to psychologists linguists and philosophers and to all who are interested in the possibility and the technique of the structural analysis of human activity After the successes moreover of L vi Strauss's subsequent books notably *Structural Anthropology* *Tristes Tropiques* *Totemism* and *The Savage Mind* this new edition of the work which founded his present outstanding reputation will have additional value as a further means of contact with one of the original minds of this century The translation has been made by James Harle Bell and John Richard von Sturmer of the University of New England Australia and by Rodney Needham of the University of Oxford Dr Needham also acted as general editor and supplied the work with a new general index He is the translator of L vi Strauss's *Le Totémisme aujourd'hui* and author of *Structure and Sentiment* 1962 and numerous papers which have contributed to the recognition of Professor L vi Strauss's work in the English speaking world

The Politics of the Artificial Victor Margolin, 2018-01-11 Emerging from the world of commercial art and product

styling design has now become completely integrated into human life Its marks are all around us from the chairs we sit on to the Web sites on our computer screens One of the pioneers of design studies and still one of its most distinguished practitioners Victor Margolin here offers a timely meditation on design and its study at the turn of the millennium and charts new directions for the future development of both fields Divided into sections on the practice and study of design the essays in *The Politics of the Artificial* cover such topics as design history design research design as a political tool sustainable design and the problems of design's relation to advanced technologies Margolin also examines the work of key practitioners such as the matrix designer Ken Isaacs Throughout the book Margolin demonstrates the underlying connections between the many ways of reflecting on and practicing design He argues for the creation of an international interdisciplinary field of design research and proposes a new ethical agenda for designers and researchers that encompasses the responsibility to users the problems of sustainability and the complicated questions of how to set boundaries for applying advanced technology to solve the problems of human life Opinionated and erudite Victor Margolin's *The Politics of the Artificial* breaks fresh ground in its call for a new approach to design research and practice Designers engineers architects anthropologists sociologists and historians will all benefit from its insights

Emotional Intelligence Daniel Goleman, 1996 Is IQ destiny Not nearly as much as we think This fascinating and persuasive program argues that our view of human intelligence is far too narrow ignoring a crucial range of abilities that matter immensely in terms of how we do in life Drawing on groundbreaking brain and behavioral research Daniel Goleman shows the factors at work when people of high IQ flounder and those of modest IQ do well These factors add up to a different way of being smart one he terms emotional intelligence This includes self awareness and impulse control persistence zeal and self motivation empathy and social deftness These are the qualities that mark people who excel in life whose relationships flourish who are stars in the workplace Lack of emotional intelligence can sabotage the intellect and ruin careers Perhaps the greatest toll is on children for whom risks include depression eating disorders unwanted pregnancies aggressiveness and crime But the news is hopeful Emotional intelligence is not fixed at birth and the author shows how its vital qualities can be nurtured and strengthened in all of us And because the emotional lessons a child learns actually sculpt the brain's circuitry he provides guidance as to how parents and schools can best use this window of opportunity in childhood The message of this eye opening program is one we must take to heart the true bell curve for a democracy must measure emotional intelligence

Fit for Life Harvey Diamond, 2010-01-01 There is only one concept to grasp and only one action to take Eat more living food than dead food The simplicity of this message has eluded people up to now In fact it may seem oversimplified Because of past frustrations and disappointments people have come to believe that losing weight is complicated difficult and expensive Truth be told all that is required to reap the myriad benefits of Harvey Diamond's program is to return to the fundamentals of life The human body is intelligent and capable beyond anyone's comprehension but in order to unleash this extraordinary intelligence including that which normalizes body weight the

proper fuel is required That fuel is living food But for some inexplicable reason people have allowed themselves to believe that they can give their bodies the wrong fuel and then have it operate at optimum efficiency And that is why most people become overweight This book offers not a diet but a lifelong way of eating that allows the eating experience to remain a joyous one rather than a clinical endeavor of measuring portions counting calories calculating grams of fat carbohydrates and protein or ingesting meal replacements It teaches readers how to eat any food in the most healthful way so there is no feeling of deprivation As readers embark on this life changing journey they will experience the surge of energy and well being that only comes as the automatic result of properly fueling their bodies Providing deliberate gentle and forgiving guidance every step of the way this book will become readers trusted source and companion as they create a new way of eating and living which will lead to both overweight and poor health becoming conditions of the past **LEV**,1999
