Real Reductive Groups I:

Real Reductive Groups I Nolan R. Wallach, 1988-03-01 Real Reductive Groups I is an introduction to the representation theory of real reductive groups It is based on courses that the author has given at Rutgers for the past 15 years It also had its genesis in an attempt of the author to complete a manuscript of the lectures that he gave at the CBMS regional conference at The University of North Carolina at Chapel Hill in June of 1981 This book comprises 10 chapters and begins with some background material as an introduction The following chapters then discuss elementary representation theory real reductive groups the basic theory of g K modules the asymptotic behavior of matrix coefficients The Langlands Classification a construction of the fundamental series cusp forms on G character theory and unitary representations and g K cohomology This book will be of interest to mathematicians and statisticians Real Reductive Groups I Nolan R. Wallach, 1988-02-28 Real Reductive Groups I is an introduction to the representation theory of real reductive groups It is based on courses that the author has given at Rutgers for the past 15 years It also had its genesis in an attempt of the author to complete a manuscript of the lectures that he gave at the CBMS regional conference at The University of North Carolina at Chapel Hill in June of 1981 This book comprises 10 chapters and begins with some background material as an introduction The following chapters then discuss elementary representation theory real reductive groups the basic theory of g K modules the asymptotic behavior of matrix coefficients The Langlands Classification a construction of the fundamental series cusp forms on G character theory and unitary representations and g K cohomology This book will be of interest to mathematicians and statisticians Harmonic Analysis of Spherical Functions on Real Reductive Groups Ramesh Gangolli, Veeravalli S. Varadarajan, 2012-12-06 Analysis on Symmetric spaces or more generally on homogeneous spaces of semisimple Lie groups is a subject that has undergone a vigorous development in recent years and has become a central part of contemporary mathematics This is only to be expected since homogeneous spaces and group representations arise naturally in diverse contexts ranging from Number theory and Geometry to Particle Physics and Polymer Chemistry Its explosive growth sometimes makes it difficult to realize that it is actually relatively young as mathematical theories go The early ideas in the subject as is the case with many others go back to Elie Cart an and Hermann Weyl who studied the compact symmetric spaces in the 1930 s However its full development did not begin until the 1950 s when Gel fand and Harish Chandra dared to dream of a theory of representations that included all semisimple Lie groups Harish Chandra s theory of spherical functions was essentially complete in the late 1950 s and was to prove to be the forerunner of his monumental work on harmonic analysis on reductive groups that has inspired a whole generation of mathematicians It is the harmonic analysis of spherical functions on symmetric spaces that is at the focus of this book The fundamental questions of harmonic analysis on symmetric spaces involve an interplay of the geometric analytical and algebraic aspects of these spaces They have therefore attracted a great deal of attention and there have been many excellent expositions of the themes that are characteristic of this subject

Real Reductive Groups Nolan R. Wallach, 1988 The Langlands Classification and Irreducible Characters for Real Reductive Groups Jeffrey Adams, Dan Barbasch, David A. Vogan, 1992 This monograph explores the geometry of the local Langlands conjecture The conjecture predicts a parametrizations of the irreducible representations of a reductive algebraic group over a local field in terms of the complex dual group and the Weil Deligne group For p adic fields this conjecture has not been proved but it has been refined to a detailed collection of conjectural relationships between p adic representation theory and geometry on the space of p adic representation theory and geometry on the space of p adic Langlands parameters In the case of real groups the predicted parametrizations of representations was proved by Langlands himself Unfortunately most of the deeper relations suggested by the p adic theory between real representation theory and geometry on the space of real Langlands parameters are not true The purposed of this book is to redefine the space of real Langlands parameters so as to recover these relationships informally to do Kazhdan Lusztig theory on the dual group The new definitions differ from the classical ones in roughly the same way that Deligne s definition of a Hodge structure differs from the classical one This book provides and introduction to some modern geometric methods in representation theory It is addressed to graduate students and research workers in representation theory and in automorphic forms Representations of Reductive Groups Roger W. Carter, Meinolf Geck, 1998-09-03 This volume provides a very accessible introduction to the representation theory of reductive algebraic groups Pseudo-reductive Groups Brian Conrad, Ofer Gabber, Gopal Prasad, 2015-06-04 This monograph provides a comprehensive treatment of the theory of pseudo reductive groups and gives their classification in a usable form This second edition has been revised and updated with Chapter 9 being completely rewritten via the useful new notion of minimal type for pseudo reductive groups Random Walks on Reductive Groups Yves Benoist, Jean-François Quint, 2018-06-29 The classical theory of random walks describes the asymptotic behavior of sums of independent identically distributed random real variables This book explains the generalization of this theory to products of independent identically distributed random matrices with real coefficients Under the assumption that the action of the matrices is semisimple or equivalently that the Zariski closure of the group generated by these matrices is reductive and under suitable moment assumptions it is shown that the norm of the products of such random matrices satisfies a number of classical probabilistic laws This book includes necessary background on the theory of reductive algebraic groups probability theory and operator theory thereby providing a modern introduction to the topic Continuous Cohomology, Discrete Subgroups, and Representations of Reductive Groups Armand Borel, Nolan R. Wallach, 2013-11-21 It has been nearly twenty years since the first edition of this work In the intervening years there has been immense progress in the use of homological algebra to construct admissible representations and in the study of arithmetic groups This second edition is a corrected and expanded version of the original which was an important catalyst in the expansion of the field Besides the fundamental material on cohomology and discrete subgroups present in the first edition this edition also contains expositions of some of the most

important developments of the last two decades **Real Reductive Groups II**, 1992-08-06 Real Reductive Groups II

Representation Theory of Reductive Groups Peter C. Trombi, 1983 **Classification of Pseudo-reductive Groups** (AM-191) Brian Conrad, Gopal Prasad, 2015-11-10 In the earlier monograph Pseudo reductive Groups Brian Conrad Ofer Gabber and Gopal Prasad explored the general structure of pseudo reductive groups In this new book Classification of Pseudo reductive Groups Conrad and Prasad go further to study the classification over an arbitrary field An isomorphism theorem proved here determines the automorphism schemes of these groups The book also gives a Tits Witt type classification of isotropic groups and displays a cohomological obstruction to the existence of pseudo split forms Constructions based on regular degenerate guadratic forms and new techniques with central extensions provide insight into new phenomena in characteristic 2 which also leads to simplifications of the earlier work A generalized standard construction is shown to account for all possibilities up to mild central extensions The results and methods developed in Classification of Pseudo reductive Groups will interest mathematicians and graduate students who work with algebraic groups in number theory and algebraic geometry in positive characteristic **Real Reductive Groups** Nolan R. Automorphic Forms, Representations and \$L\$-Functions Armand Borel, W. Casselman, American Wallach, 1988 Mathematical Society, 1979-06-30 Part 2 contains sections on Automorphic representations and L functions Arithmetical algebraic geometry and L functions Representations Of Real And P-adic Groups Eng-chye Tan, Chen-bo Zhu, 2004-04-15 The Institute for Mathematical Sciences at the National University of Singapore hosted a research program on Representation Theory of Lie Groups from July 2002 to January 2003 As part of the program tutorials for graduate students and junior researchers were given by leading experts in the field This invaluable volume collects the expanded lecture notes of those tutorials The topics covered include uncertainty principles for locally compact abelian groups fundamentals of representations of p adic groups the Harish Chandra Howe local character expansion classification of the square integrable representations modulo cuspidal data Dirac cohomology and Vogan s conjecture multiplicity free actions and Schur Weyl Howe duality The lecturers include Tomasz Przebinda from the University of Oklahoma USA Gordan Savin from the University of Utah USA Stephen DeBacker from Harvard University USA Marko Tadi from the University of Zagreb Croatia Jing Song Huang from The Hong Kong University of Science and Technology Hong Kong Pavle Pand i from the University of Zagreb Croatia Chal Benson and Gail Ratcliff from East Carolina University USA and Roe Goodman from Rutgers University USA Unitary Representations of Real Reductive Groups Jeffrey Adams, Marc A. A. van Leeuwen, Peter E. Trapa, 2020 Linear Algebraic Groups Armand Borel, 2012-12-06 This book is a revised and enlarged edition of Linear Algebraic Groups published by W A Benjamin in 1969 The text of the first edition has been corrected and revised Accordingly this book presents foundational material on algebraic groups Lie algebras transformation spaces and quotient spaces After establishing these basic topics the text then turns to solvable groups general properties of linear

algebraic groups and Chevally's structure theory of reductive groups over algebraically closed groundfields The remainder of the book is devoted to rationality questions over non algebraically closed fields This second edition has been expanded to include material on central isogenies and the structure of the group of rational points of an isotropic reductive group The main prerequisite is some familiarity with algebraic geometry The main notions and results needed are summarized in a chapter with references and brief proofs Characters of Reductive Groups Over a Finite Field George Lusztig, 1984-06-21 This book presents a classification of all complex irreducible representations of a reductive group with connected centre over a finite field To achieve this the author uses etale intersection cohomology and detailed information on representations of Real Reductive Groups I Nolan R. Wallach, 1988-03-13 Real Reductive Groups I is an introduction to the Weyl groups representation theory of real reductive groups It is based on courses that the author has given at Rutgers for the past 15 years It also had its genesis in an attempt of the author to complete a manuscript of the lectures that he gave at the CBMS regional conference at The University of North Carolina at Chapel Hill in June of 1981 This book comprises 10 chapters and begins with some background material as an introduction The following chapters then discuss elementary representation theory real reductive groups the basic theory of g K modules the asymptotic behavior of matrix coefficients The Langlands Classification a construction of the fundamental series cusp forms on G character theory and unitary representations and g K cohomology This book will be of interest to mathematicians and statisticians **Representations of Finite Groups of Lie Type** François Digne, Jean Michel, 1991-04-26 The authors aim to treat the basic theory of representations of finite groups of Lie type such as linear unitary orthogonal and symplectic groups They emphasize the Curtis Alvis duality map and Mackey s theorem and the results that can be deduced from it They also discuss Deligne Lusztig induction This will be the first elementary treatment of this material in book form and will be welcomed by beginning graduate students in algebra
