**Advances in Databases and Information Systems** Barbara Catania, Mirjana Ivanović, Bernhard Thalheim, 2010-09-09 This book constitutes the refereed proceedings of the 14th East European Conference on Advances in Databases and Information Systems ADBIS 2010 held in Novi Sad Serbia on September 20-24 2010 The 36 revised full papers and 14 short papers were

carefully selected from 165 submissions. Collectively the papers span a wide spectrum of topics in the database and information systems field including database theory, advanced DBMS technologies, design methods, data mining, and data warehousing, spatio-temporal and graph-structured data, and database applications. Geospatial Information Technology for Emergency Response Sisi Zlatanova, Jonathan Li, 2008-01-24 Disaster management is generally understood to consist of four phases: mitigation, preparedness, response, and recovery. While these phases are all important and interrelated, response and recovery are often considered to be the most critical in terms of saving lives. Response is the acute phase occurring after the event and includes all arrangements. *Geo-information for Disaster Management* Peter van Oosterom, Sijka Zlatanova, Elfriede Fendel, 2006-02-28 Geo-information technology can be of considerable use in disaster management but with considerable challenge in integrating systems, interoperability, and reliability. This book provides a broad overview of geo-information technology, software systems currently used and to be developed for disaster management. The text invites discussion on systems and requirements for use of geo-information under time and stress constraints and unfamiliar situations, environments, and circumstances. **Database Systems for Advanced Applications** Makoto Onizuka, Jae-Gil Lee, Yongxin Tong, Chuan Xiao, Yoshiharu Ishikawa, Sihem Amer-Yahia, H. V. Jagadish, Kejing Lu, 2024-09-01 The seven-volume set LNCS 14850-14856 constitutes the proceedings of the 29th International Conference on Database Systems for Advanced Applications (DASFAA 2024) held in Gifu, Japan, in July 2024. The total of 147 full papers along with 85 short papers presented together in this seven-volume set was carefully reviewed and selected from 722 submissions. Additionally, 14 industrial papers, 18 demo papers, and 6 tutorials are included. The conference presents papers on subjects such as: Part I: Spatial and temporal data, database core technology, federated learning; Part II: Machine learning, text processing; Part III: Recommendation, multi-media; Part IV: Privacy and security, knowledge base and graphs; Part V: Natural language processing, large language model, time series and stream data; Part VI: Graph and network, hardware acceleration; Part VII: Emerging application, industry papers, demo papers. **Database Systems for Advanced Applications**, 2005. *Real-Time Database Systems* Azer Bestavros, Kwei-Jay Lin, Sang Hyuk Son, 2012-12-06 Despite the growing interest in Real-Time Database Systems, there is no single book that acts as a reference to academics, professionals, and practitioners who wish to understand the issues involved in the design and development of RTDBS. *Real-Time Database Systems: Issues and Applications* fulfills this need. This book presents the spectrum of issues that may arise in various real-time database applications, the available solutions, and technologies that may be used to address these issues, and the open problems that need to be tackled in the future. With rapid advances in this area, several concepts have been proposed without a widely accepted consensus on their definitions and implications. To address this need, the first chapter is an introduction to the key RTDBS concepts and definitions, which is followed by a survey of the state of the art in RTDBS research and practice. The remainder of the book consists of four sections: models and paradigms, applications and benchmarks, scheduling and concurrency control, and experimental systems.

The chapters in each section are contributed by experts in the respective areas Real Time Database Systems Issues and Applications is primarily intended for practicing engineers and researchers working in the growing area of real time database systems For practitioners the book will provide a much needed bridge for technology transfer and continued education For researchers this book will provide a comprehensive reference for well established results This book can also be used in a senior or graduate level course on real time systems real time database systems and database systems or closely related courses
