A handy reference for practitioners in the field **Synchronization in Real-Time Systems** Ragunathan Rajkumar, 2012-12-06 Real time computing systems are vital to a wide range of applications For example they are used in the control of nuclear reactors and automated manufacturing facilities in controlling and tracking air traffic and in communication systems In recent years real time systems have also grown larger and become more critical For instance advanced aircraft such as the space shuttle must depend heavily on computer systems Carlow 84 The centralized control of manufacturing facilities and assembly plants operated by robots are other examples at the heart of which lie embedded real time systems Military defense systems deployed in the air on the ocean surface land and underwater have also been increasingly relying upon real time systems for monitoring and operational safety purposes and for retaliatory and containment measures In telecommunications and in multi media applications real time characteristics are essential to maintain the integrity of transmitted data audio and video signals Many of these systems control monitor or perform critical operations and must respond quickly to emergency events in a wide range of embedded applications They are therefore required to process tasks with stringent timing requirements and must perform these tasks in a way that these timing requirements are guaranteed to be met Real time scheduling algorithms attempt to ensure that system timing behavior meets its specifications but typically assume that tasks do not share logical or physical resources Since resource sharing cannot be eliminated synchronization primitives must be used to ensure that resource consistency constraints are not violated *Embedded / Real-Time Systems Programming Black Book: Concepts: Design & Programming (2005 Edition)* w/CD Prasad, 2003-11-12 This book comprehensively covers the three main areas of the subject concepts design and programming Information on the applications of the embedded real time systems are woven into almost every aspect discussed which of course is inevitable Hardware architecture and the various hardware platforms design development operating systems programming in Linux and RTLinux navigation systems and protocol converter are discussed extensively Special emphasis is given to embedded database and Java applications and embedded software development Introduction to Embedded Systems Architecture of Embedded Systems Programming for Embedded Systems The Process of Embedded System Development Hardware Platforms Communication Interfaces Embedded Real Time Operating System Concepts Overview of Embedded Real Time Operating Systems Target Image Creation Representative Embedded Systems Programming in Linux Programming in RTLinux Development of Navigation System Development of Protocol Converter Embedded Database Application Mobile Java Applications Embedded Software Development on 89C51 Micro Controller Platform Embedded Software Development on AVR Micro Controller Platform Embedded Systems Applications Using Intel StrongARM Platform Future Trends **Concurrent Programming** Alan Burns, Geoff Davies, 1993 This book provides a hands on introduction to concurrent programming principles and techniques Pascal FC Functionally Concurrent a teaching version of the Pascal language available from the authors is used to illustrate the main techniques used in the concurrency
