introduction to algorithms for readers with no background in advanced mathematics or computer science emphasizing examples and real world problems Algorithms are what we do in order not to have to do something Algorithms consist of instructions to carry out tasks usually dull repetitive ones Starting from simple building blocks computer algorithms enable machines to recognize and produce speech translate texts categorize and summarize documents describe images and predict the weather A task that would take hours can be completed in virtually no time by using a few lines of code in a modern scripting program This book offers an introduction to algorithms through the real world problems they solve The algorithms

are presented in pseudocode and can readily be implemented in a computer language The book presents algorithms simply and accessibly without overwhelming readers or insulting their intelligence Readers should be comfortable with mathematical fundamentals and have a basic understanding of how computers work all other necessary concepts are explained in the text After presenting background in pseudocode conventions basic terminology and data structures chapters cover compression cryptography graphs searching and sorting hashing classification strings and chance Each chapter describes real problems and then presents algorithms to solve them Examples illustrate the wide range of applications including shortest paths as a solution to paragraph line breaks strongest paths in elections systems hashes for song recognition voting power Monte Carlo methods and entropy for machine learning Real World Algorithms can be used by students in disciplines from economics to applied sciences Computer science majors can read it before using a more technical text

The Technology Fallacy Gerald C. Kane, Anh Nguyen Phillips, Jonathan R. Copulsky, Garth R. Andrus, 2022-08-23

Why an organization's response to digital disruption should focus on people and processes and not necessarily on technology Digital technologies are disrupting organizations of every size and shape leaving managers scrambling to find a technology fix that will help their organizations compete This book offers managers and business leaders a guide for surviving digital disruptions but it is not a book about technology It is about the organizational changes required to harness the power of technology The authors argue that digital disruption is primarily about people and that effective digital transformation involves changes to organizational dynamics and how work gets done A focus only on selecting and implementing the right digital technologies is not likely to lead to success The best way to respond to digital disruption is by changing the company culture to be more agile risk tolerant and experimental The authors draw on four years of research conducted in partnership with MIT Sloan Management Review and Deloitte surveying more than 16 000 people and conducting interviews with managers at such companies as Walmart Google and Salesforce They introduce the concept of digital maturity the ability to take advantage of opportunities offered by the new technology and address the specifics of digital transformation including cultivating a digital environment enabling intentional collaboration and fostering an experimental mindset Every organization needs to understand its digital DNA in order to stop doing digital and start being digital Digital disruption won't end anytime soon the average worker will probably experience numerous waves of disruption during the course of a career The insights offered by The Technology Fallacy will hold true through them all A book in the Management on the Cutting Edge series published in cooperation with MIT Sloan Management Review

Acting in an Uncertain World

Michel Callon,Pierre Lascoumes,Yannick Barthe,2011-01-21 A call for a new form of democracy in which hybrid forums composed of experts and laypeople address such sociotechnical controversies as hazardous waste genetically modified organisms and nanotechnology Controversies over such issues as nuclear waste genetically modified organisms asbestos tobacco gene therapy avian flu and cell phone towers arise almost daily as rapid scientific and technological advances create uncertainty and bring about unforeseen concerns The authors of Acting in an Uncertain World argue that political institutions must be expanded and improved to manage these controversies to transform them into productive conversations and to bring about technical democracy They show how hybrid forums in which experts non experts ordinary citizens and politicians come together reveal the limits of traditional delegative democracies in which decisions are made by quasi professional politicians and techno scientific information is the domain of specialists in laboratories The division between professionals and laypeople the authors claim is simply outmoded The authors argue that laboratory research should be complemented by everyday experimentation pursued in the real world and they describe various modes of cooperation between the two They explore a range of concrete examples of hybrid forums that have dealt with sociotechnical controversies including nuclear waste disposal in France industrial waste and birth defects in Japan a childhood leukemia cluster in Woburn Massachusetts and mad cow disease in the United Kingdom The authors discuss the implications for political decision making in general and describe a dialogic democracy that enriches traditional representative democracy To

invent new procedures for consultation and representation they suggest is to contribute to an endless process that is necessary for the ongoing democratization of democracy

Improving Health Professional Education and Practice Through Technology National Academies of Sciences, Engineering, and Medicine,Health and Medicine Division,Board on Global Health,Global Forum on Innovation in Health Professional Education,2018-11-19 A pressing challenge in the modern health care system is the gap between education and clinical practice Emerging technologies have the potential to bridge this gap by creating the kind of team based learning environments and clinical approaches that are increasingly necessary in the modern health care system both in the United States and around the world To explore these technologies and their potential for improving education and practice the National Academies of Sciences Engineering and Medicine hosted a workshop in November 2017 Participants explored effective use of technologies as tools for bridging identified gaps within and between health professions education and practice in order to optimize learning performance and access in high middle and low income areas while ensuring the well being of the formal and informal health workforce This publication summarizes the presentations and discussions from the workshop The Revenge of the Real Benjamin Bratton,2021-06-29 The future of politics after the pandemic COVID 19 exposed the pre existing conditions of the current global crisis Many Western states failed to protect their populations while others were able to suppress the virus only with sweeping social restrictions In contrast many Asian countries were able to make much more precise interventions Everywhere lockdown transformed everyday life introducing an epidemiological view of society based on sensing modeling and filtering What lessons are to be learned The Revenge of the Real envisions a new positive biopolitics that recognizes that governance is literally a matter of life and death We are grappling with multiple interconnected dilemmas climate change pandemics the tensions between the individual and society all of which have to be addressed on a planetary scale Even when separated we are still enmeshed Can the world govern itself differently What models and philosophies are needed Bratton argues that instead of thinking of biotechnologies as something imposed on society we must see them as essential to a politics of infrastructure knowledge and direct intervention In this way we can build a society based on a new rationality of inclusion care and prevention *Real-World Functional Programming* Tomas Petricek,Jonathan Skeet,2009-11-30 Functional programming languages like F Erlang and Scala are attracting attention as an efficient way to handle the new requirements for programming multi processor and high availability applications Microsoft s new F is a true functional language and C uses functional language features for LINQ and other recent advances Real World

Functional Programming is a unique tutorial that explores the functional programming model through the F and C languages. The clearly presented ideas and examples teach readers how functional programming differs from other approaches. It explains how ideas look in F, a functional language, as well as how they can be successfully used to solve programming problems in C. Readers build on what they know about .NET and learn where a functional approach makes the most sense and how to apply it effectively in those cases. The reader should have a good working knowledge of C. No prior exposure to F or functional programming is required. Purchase of the print book comes with an offer of a free PDF, ePub, and Kindle eBook from Manning. Also available is all code from the book.
