

# WHAT IS REALISM?

**Realism** is an artistic and literary movement that emerged in the 19th century. It sought to represent reality truthfully and accurately, focusing on everyday life and ordinary people.

**Realism** rejected idealized depictions of the world and emphasized observation and direct experience. The movement aimed to portray society and human experience without romanticism or exaggeration, and often dealt with themes such as social injustice, poverty, and working-class life.

**Realism** had a significant impact on literature, painting, and other art forms, and remains an influential approach to storytelling and representation today.

**Realism and the Explanation of Behavior** Merle B. Turner, 1971      Teleological Realism Scott Robert Sehon, 2005 A non reductionist account of mind and agency claiming that common sense psychological explanations are teleological and not causal Using the language of common sense psychology CSP we explain human behavior by citing its reason or purpose and this is central to our understanding of human beings as agents On the other hand since human beings are physical objects human behavior should also be explicable in the language of physical science in which causal accounts cast human beings as collections of physical particles CSP talk of mind and agency however does not seem to mesh well with the language of physical science In Teleological Realism Scott Sehon argues that CSP explanations are not causal but teleological that they cite the purpose or goal of the behavior in question rather than an antecedent state that caused the behavior CSP explanations of behavior Sehon claims are answering a question different from that answered by physical science explanations and accordingly CSP explanations and physical science explanations are independent of one another Common sense facts about mind and agency can thus be independent of the physical facts about human beings and contrary to the views of most philosophers of mind in recent decades common sense psychology will not be subsumed by physical science Sehon defends his non reductionist account of mind and agency in clear and nontechnical language He carefully distinguishes his view from forms of strong naturalism that would seem to preclude it And he evaluates key objections to teleological realism including those posed by Donald Davidson s influential article *Actions Reasons and Causes* and some put forth by more recent proponents of causal theories of action CSP Sehon argues has a different realm than does physical science the normative notions that are central to CSP are not reducible to physical facts and laws      What It Is Like To Perceive J. Christopher Maloney, 2018-06-15 Naturalistic cognitive science when realistically rendered rightly maintains that to think is to deploy contentful mental representations Accordingly conscious perception memory and anticipation are forms of cognition that despite their introspectively manifest differences may coincide in content Sometimes we remember what we saw other times we predict what we will see Why then does what it is like consciously to perceive differ so dramatically from what it is like merely to recall or anticipate the same Why if thought is just representation does the phenomenal character of seeing a sunset differ so stunningly from the tepid character of recollecting or predicting the sun s descent J Christopher Maloney argues that unlike other cognitive modes perception is in fact immediate direct acquaintance with the object of thought Although all mental representations carry content the vehicles of perceptual representation are uniquely composed of the very objects represented To perceive the setting sun is to use the sun and its properties to cast a peculiar cognitive vehicle of demonstrative representation This vehicle s embedded referential term is identical with and demonstrates the sun itself And the vehicle s self attributive demonstrative predicate is itself forged from a property of that same remote star So in this sense the perceiving mind is an extended mind Perception is unbrokered cognition of what is real exactly as it really is

Maloney's theory of perception will be of great interest in the philosophy of mind and cognitive science      Selves and Other Texts Joseph Margolis, 2010-11-01 Extending his well known investigations into the nature and logic of art and history in the cultural world Joseph Margolis here offers a sustained account of how selves and the cultural phenomena they generate language history action art can be viewed as just as real as the physical nature from which they are emergent while not being reducible to it The book starts off with a review of prominent philosophies of art over the past half century focusing especially on Beardsley Goodman and Danto so as to highlight the need for carefully distinguishing between the metaphysical and epistemological features of physical nature and human culture The second part of the book builds on the first part's analyses of artworks to propose a theory of selves as self interpreting texts *Selves and Other Texts* aims to develop new ways of understanding the conceptual inseparability of our analysis of physical nature and our analysis of ourselves

*Hermeneutic Moral Realism in Psychology* Brent D. Slife, Stephen Yanchar, 2019-02-12 Traditional sources of morality philosophical ethics religious standards and cultural values are being questioned at a time when we most need morality's direction Research shows that though moral direction is vital to our identities happiness productivity and relationships there is a decline in its development and use especially among younger adults This book argues that hermeneutic moral realism is the best hope for meeting the twenty first century challenges of scientism individualism and postmodernism In addition to providing a thorough understanding of moral realism the volume also takes preliminary steps toward its application in important practical settings including research psychotherapy politics and publishing      *Scientific Realism and Human Emancipation* Roy Bhaskar, 2009-01-26 Following on from Roy Bhaskar's first two books *A Realist Theory of Science* and *The Possibility of Naturalism* *Scientific Realism and Human Emancipation* establishes the conception of social science as explanatory and thence emancipatory critique *Scientific Realism and Human Emancipation* starts from an assessment of the impasse of contemporary accounts of science as stemming from an incomplete critique of positivism It then proceeds to a systematic exposition of scientific realism in the form of transcendental realism highlighting a conception of science as explanatory of a structured differentiated and changing world Turning to the social domain the book argues for a view of the social order as conditioned by and emergent from nature Advocating a critical naturalism the author shows how the transformational model of social activity together with the conception of social science as explanatory critique which it entails resolves the divisions and dualisms besetting orthodox social and normative theory between society and the individual structure and agency meaning and behavior mind and body reason and cause fact and value and theory and practice The book then goes on to discuss the emancipatory implications of social science and sketches the nature of the depth investigation characteristically entailed In the highly innovative third part of the book Roy Bhaskar completes his critique of positivism by developing a theory of philosophical discourse and ideology on the basis of the transcendental realism and critical naturalism already developed showing how positivism functions as a restrictive ideology of and for science and other

social practices      **Austere Realism** Terence E. Horgan, Matjaz Potrc, 2009-08-21 A provocative ontological cum semantic position asserting that the right ontology is austere in its exclusion of numerous common sense and scientific posits and that many statements employing such posits are nonetheless true The authors of Austere Realism describe and defend a provocative ontological cum semantic position asserting that the right ontology is minimal or austere in that it excludes numerous common sense posits and that statements employing such posits are nonetheless true when truth is understood to be semantic correctness under contextually operative semantic standards Terence Horgan and Matjaz Potrc argue that austere realism emerges naturally from consideration of the deep problems within the naive common sense approach to truth and ontology They offer an account of truth that confronts these deep internal problems and is independently plausible contextual semantics which asserts that truth is semantically correct affirmability Under contextual semantics much ordinary and scientific thought and discourse is true because its truth is indirect correspondence to the world After offering further arguments for austere realism and addressing objections to it Horgan and Potrc consider various alternative austere ontologies They advance a specific version they call blobjectivism the view that the right ontology includes only one concrete particular the entire cosmos the blobject which although it has enormous local spatiotemporal variability does not have any proper parts The arguments in Austere Realism are powerfully made and concisely and lucidly set out The authors contentions and their methodological approach products of a decade long collaboration will generate lively debate among scholars in metaphysics ontology and philosophy      **A Metaphysics for Scientific Realism** A. Chakravartty, 2017-03-23 A METAPHYSICS FOR SCIENTIFIC REALISM      **Praise and Blame** Daniel N. Robinson, 2009-04-11 How should a prize be awarded after a horse race Should it go to the best rider the best person or the one who finishes first To what extent are bystanders blameworthy when they do nothing to prevent harm Are there any objective standards of moral responsibility with which to address such perennial questions In this fluidly written and lively book Daniel Robinson takes on the prodigious task of setting forth the contours of praise and blame He does so by mounting an important and provocative new defense of a radical theory of moral realism and offering a critical appraisal of prevailing alternatives such as determinism and behaviorism and of their conceptual shortcomings The version of moral realism that arises from Robinson's penetrating inquiry an inquiry steeped in Aristotelian ethics but deeply informed by modern scientific knowledge of human cognition is independent of cognition and emotion At the same time Robinson carefully explores how such human attributes succeed or fail in comprehending real moral properties Through brilliant analyses of constitutional and moral luck of biosocial and genetic versions of psychological determinism and of relativistic anthropological accounts of variations in moral precepts he concludes that none of these conceptions accounts either for the nature of moral properties or the basis upon which they could be known Ultimately the theory that Robinson develops preserves moral properties even while acknowledging the conditions that undermine the powers of human will      Wilfrid Sellars, Idealism, and Realism Patrick Reider, 2016-11-17

Wilfrid Sellars *Idealism and Realism* is the first study of its kind to address a range of realist and idealist views inspired by psychological nominalism. Bringing together premier analytic realists and distinguished defenders of German idealism, it reveals why psychological nominalism is one of the most important theories of the mind to come out of the 20th century. The theory first put forward by Wilfrid Sellars argues that language is the only means by which humans can learn the types of socially shared practices that permit rationality. Although wedded to important aspects of German idealism, Sellars' theory is couched in bold realist terms of the analytic tradition. Those who are sympathetic to German idealism find this realist's appropriation of German idealism problematic. Wilfrid Sellars' *Idealism and Realism* thus creates a rare venue for realists and idealists to debate the epistemic outcome of the mental processes they both claim are essential to experience. Their resulting discussion bridges the gap between analytic and continental philosophy. In providing original and accessible chapters on psychological nominalism, this volume raises themes that intersect with numerous disciplines: the philosophy of mind, philosophy of language, epistemology, and metaphysics. It also provides clarity on arguably the best available account of why humans can reason, be self-aware, know, and act as agents.

Science And Human Behavior B.F. Skinner, 2012-12-18. The psychology classic: a detailed study of scientific theories of human nature and the possible ways in which human behavior can be predicted and controlled from one of the most influential behaviorists of the twentieth century and the author of *Walden Two*. This is an important book, exceptionally well written and logically consistent with the basic premise of the unitary nature of science. Many students of society and culture would take violent issue with most of the things that Skinner has to say, but even those who disagree most will find this a stimulating book. Samuel M. Strong, *The American Journal of Sociology*. This is a remarkable book, remarkable in that it presents a strong, consistent, and all but exhaustive case for a natural science of human behavior. It ought to be valuable for those whose preferences lie with as well as those whose preferences stand against a behavioristic approach to human activity. Harry Prosch, *Ethics*.

**Varieties of Moral Personality** Owen Flanagan, 1993-01-01. Owen Flanagan argues in this book for a more psychologically realistic ethical reflection and spells out the ways in which psychology can enrich moral philosophy. Beginning with a discussion of such moral saints as Gandhi, Mother Teresa, and Oskar Schindler, Flanagan charts a middle course between an ethics that is too realistic and socially parochial and one that is too idealistic, giving no weight to our natures.

*Behavior Theory and Philosophy* Kennon A. Lattal, Philip N. Chase, 2013-03-14. This volume is based on a conference held at West Virginia University in April 2000 in recognition of the career-long contributions to psychology of Hayne W. Reese, Centennial Professor of Psychology who retired from the University at the end of the 1999-2000 academic year. Although Professor Reese may be even better known for his contributions to developmental psychology, his influential scholarly work on philosophical and conceptual issues that impact all of psychology provided the impetus for the conference. Behavior theory and philosophy was the name given by Professor Reese and one of the authors in this volume, Jon Krapfl, to a course that they developed at West Virginia University in the late

1970s It seemed appropriate to adopt its title for both the conference and this volume as the shared theme involves the ideas that have shaped modern behavior analysis A number of people contributed to the success of the May 2000 conference honoring Hayne Reese and we thank them all for their efforts Dean Duane Nellis of the Eberly College of Arts and Sciences at WVU offered enthusiastic support for the project both financially and through his assignment of staff to help with the conference Mark Dalessandro Relations Director for the Eberly College of Arts and Sciences served as the point man for the conference and made all of the local arrangements both within the university and the community

**Reasoning of State** Brian C. Rathbun, 2019-02-14 Challenges the assumption of the rationality of foreign policy makers in international relations showing how leaders systematically vary in the rationality of their thinking Derived Relational Responding Applications for Learners with Autism and Other Developmental Disabilities Ruth Anne Rehfeldt, Yvonne Barnes-Holmes, 2009-04-02 Copublished with Context Press Derived Relational Responding offers a series of revolutionary intervention programs for applied work in human language and cognition targeted at students with autism and other developmental disabilities It presents a program drawn from derived stimulus relations that you can use to help students of all ages acquire foundational and advanced verbal social and cognitive skills The first part of Derived Relational Responding provides step by step instructions for helping students learn relationally acquire rudimentary verbal operants and develop other basic language skills In the second section of this book you will find ways to enhance students receptive and expressive repertoires by developing their ability to read spell construct sentences and use grammar Finally you will find out how to teach students to apply the skills they've learned to higher order cognitive and social functions including perspective taking empathy mathematical reasoning intelligence and creativity This applied behavior analytic training approach will help students make many substantial and lasting gains in language and cognition not possible with traditional interventions

Science Without Laws Ronald N. Giere, 1999-06 Science without Laws thus stakes out a middle ground in these debates by demonstrating a more powerful way of seeing science **BOOK JACKET** Scientific Perspectivism Ronald N. Giere, 2010-05-05 Many people assume that the claims of scientists are objective truths But historians sociologists and philosophers of science have long argued that scientific claims reflect the particular historical cultural and social context in which those claims were made The nature of scientific knowledge is not absolute because it is influenced by the practice and perspective of human agents Scientific Perspectivism argues that the acts of observing and theorizing are both perspectival and this nature makes scientific knowledge contingent as Thomas Kuhn theorized forty years ago Using the example of color vision in humans to illustrate how his theory of perspectivism works Ronald N Giere argues that colors do not actually exist in objects rather color is the result of an interaction between aspects of the world and the human visual system Giere extends this argument into a general interpretation of human perception and more controversially to scientific observation conjecturing that the output of scientific instruments is perspectival Furthermore complex scientific principles such as Maxwell's equations

describing the behavior of both the electric and magnetic fields make no claims about the world but models based on those principles can be used to make claims about specific aspects of the world Offering a solution to the most contentious debate in the philosophy of science over the past thirty years Scientific Perspectivism will be of interest to anyone involved in the study of science

**Introduction to New Realism** Maurizio Ferraris, 2014-12-18 Introduction to New Realism provides an overview of the movement of contemporary thought named New Realism by its creator and most celebrated practitioner Maurizio Ferraris Sharing significant concerns and features with Speculative Realism and Object Oriented Ontology New Realism can be said to be one of the most prescient philosophical positions today Its desire to overcome the postmodern antirealism of Kantian origin and to reassert the importance of truth and objectivity in the name of a new Enlightenment has had an enormous resonance both in Europe and

in the US Introduction to New Realism is the first volume dedicated to exposing this continental movement to an anglophone audience Featuring a foreword by the eminent contemporary philosopher and leading exponent of Speculative Realism Iain Hamilton Grant the book begins by tracing the genesis of New Realism and outlining its central theoretical tenets before opening onto three distinct sections The first Negativity is a critique of the postmodern idea that the world is constructed by our conceptual schemas all the more so as we have entered the age of digitality and virtuality The second thesis positivity proposes the fundamental ontological assertion of New Realism namely that not only are there parts of reality that are independent of thought but these parts are also able to act causally over thought and the human world The third thesis normativity applies New Realism to the sphere of the social world Finally an afterword written by two young scholars explains in more detail the relationship between New Realism and other forms of contemporary realism
