The Origin of Consciousness in the Breakdown of the Bicameral Mind Julian Jaynes, 2000-08-15 National Book Award Finalist This man's ideas may be the most influential not to say controversial of the second half of the twentieth century Columbus Dispatch At the heart of this classic seminal book is Julian Jaynes's still controversial thesis that human consciousness did not begin far back in animal evolution but instead is a learned process that came about only three thousand years ago and is still developing The implications of this revolutionary scientific paradigm extend into virtually every aspect of our psychology our history and culture our religion and indeed our future Don't be put off by the academic title of Julian Jaynes's The Origin of Consciousness in the Breakdown of the Bicameral Mind Its prose is always lucid and often lyrical he unfolds his case with the utmost intellectual rigor The New York Times When Julian Jaynes speculates that until late in the twentieth millennium BC men had no consciousness but were automatically obeying the voices of the gods we are astounded but compelled to follow this remarkable thesis John Updike The New Yorker He is as startling as Freud was in The Interpretation of Dreams and Jaynes is equally as adept at forcing a new view of known human behavior American Journal of Psychiatry

The Spell of the Sensuous David Abram, 1997-02-25 Winner of the International Lannan Literary Award for Nonfiction Animal tracks word magic the speech of stones the power of letters and the taste of the wind all figure prominently in this intellectual tour de force that returns us to our senses and to the sensuous terrain that sustains us This major work of ecological philosophy startles the senses out of habitual ways of perception For a thousand generations human beings viewed themselves as part of the wider community of nature and they

carried on active relationships not only with other people with other animals plants and natural objects including mountains rivers winds and weather patterns that we have only lately come to think of as inanimate How then did humans come to sever their ancient reciprocity with the natural world What will it take for us to recover a sustaining relation with the breathing earth In *The Spell of the Sensuous* David Abram draws on sources as diverse as the philosophy of Merleau Ponty Balinese shamanism Apache storytelling and his own experience as an accomplished sleight of hand of magician to reveal the subtle dependence of human cognition on the natural environment He explores the character of perception and excavates the sensual foundations of language which even at its most abstract echoes the calls and cries of the earth On every page of this lyrical work Abram weaves his arguments with a passion a precision and an intellectual daring that recall such writers as Loren Eiseley Annie Dillard and Barry Lopez
