Realizing the Potential of C4I: Fundamental Challenges, 1999 Section 262 of the Defense Authorization Act for Fiscal Year 1996 directed the Secretary of Defense to request that the National Research Council conduct a review of current and planned service and defense wide programs for command control communications computers and intelligence C4I with a special focus on cross service and inter service issues For purposes of this report C4I systems include systems designed to support a

commander's exercise of command and control across the range of military operations and to generate information and knowledge about an adversary and friendly forces. Although the Cold War is over, new regional threats to U.S. interests are increasingly likely. The U.S. military in its traditional role as an instrument of national power will be required to deal with a more varied set of military tasks and missions, helping to both establish and maintain regional peace and stability and also coping with less traditional tasks such as humanitarian relief and disaster recovery. Budget pressures have already resulted in a significantly reduced force structure and withdrawal of U.S. military presence from many overseas locations. Joint operations are now the norm, and in many cases U.S. military operations are combined with those of allied and coalition forces. Forces responding to contingencies are likely to be employed as they are with only minimal time for preparation and deployment before entering the operational phase of a contingency. The military that must play these roles has many different C4I systems, both old and new. Older systems often were built for single purpose, stand alone applications and often rely heavily on military specific technology. In contrast, current systems are increasingly being built to meet explicit requirements for interoperability and flexibility, and the Department of Defense has been increasingly capitalizing on commercial information technologies for C4I systems.

A Review of the FBI's Trilogy Information Technology Modernization Program National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on the FBI's Trilogy Information Technology Modernization Program, 2004-06-10. The Federal Bureau of Investigation (FBI) is in the process of developing a modern information technology (IT) system, the Trilogy program, that is designed to provide a high speed network, modern workstations and software, and an application, the Virtual Case File (VCF), to enhance the ability of agents to organize, access, and analyze information. Implementation of this system has encountered substantial difficulties, however, and has been the subject of much investigation and congressional concern. To help address these problems, the FBI asked the National Research Council (NRC) to undertake a quick review of the program and the progress that has been made to date. This report presents that review. The current status of four major aspects of the program, the enterprise architecture, system design, program management, and human resources, are discussed, and recommendations are presented to address the problems.

Cybersecurity Today and Tomorrow National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, 2002-04-12. This report reviews past NRC studies that have examined various dimensions of computer and network security and vulnerability and brings the results forward into the context of the current environment of security and vulnerability. The review includes work done since 1991, such as *Computers at Risk* (1991), *Cryptography's Role in Securing the Information Society* (1996), *For the Record: Protecting Electronic Health Information* (1997), *Trust in Cyberspace* (1999), *Continued Review of the Tax Systems Modernization of the Internal Revenue Service* (1996), *Realizing the Potential of C4I* (1999), and *Embedded Everywhere* (2001).

Trillions for Military Technology J. Alic, 2007-09-03. *Trillions for Military Technology* explains why the weapons

purchased by the U S Department of Defense cost so much why it takes decades to get them into production even as innovation in the civilian economy becomes ever more frenetic and why some of those weapons don t work very well despite expenditures of many billions of dollars It also explains what do about these problems The author argues that the internal politics of the armed services make weapons acquisition almost unmanageable Solutions require empowering civilian officials and reforms that will bring choice of weapons into the sunshine of public debate Crisis Management: Concepts, Methodologies, Tools, and Applications Management Association, Information Resources,2013-11-30 This book explores the latest empirical research and best real world practices for preventing weathering and recovering from disasters such as earthquakes or tsunamis to nuclear disasters and cyber terrorism Provided by publisher *State Voter Registration Databases* National Research Council,Division on Engineering and Physical Sciences,Computer Science and Telecommunications Board,Committee on State Voter Registration Databases,2008-05-17 The Help America Vote Act of 2002 requires the states to develop a single computerized voter registration data base VRD that is defined maintained and administered at the state level To help the states with this task the U S Election Assistance Commission asked the NRC to organize a series of workshops and prepare an interim report addressing the challenges in implementing and maintaining state VRDs The EAC also asked the NRC to advise the states on how to evolve and maintain the databases so that they can share information with each other This report provides an examination of various challenges to the deployment of state VRDs and describes potential solutions to these challenges This interim report s primary focus is on shorter term recommendations although a number of long range recommendations are presented The final report will elaborate on the long range questions and address considerations about interstate interoperability of the VRDs *Unmanned Aircraft Systems* Ella Atkins,Anibal Ollero,Antonios Tsourdos,2017-01-17 UNMANNED AIRCRAFT SYSTEMS UNMANNED AIRCRAFT SYSTEMS An unmanned aircraft system UAS sometimes called a drone is an aircraft without a human pilot on board instead the UAS can be controlled by an operator station on the ground or may be autonomous in operation UAS are capable of addressing a broad range of applications in diverse complex environments Traditionally employed in mainly military applications recent regulatory changes around the world are leading to an explosion of interest and wide ranging new applications for UAS in civil airspace Covering the design development operation and mission profiles of unmanned aircraft systems this single comprehensive volume forms a complete stand alone reference on the topic The volume integrates with the online Wiley Encyclopedia of Aerospace Engineering providing many new and updated articles for existing subscribers to that work The chapters cover the following items Airframe configurations and design launch systems power generation propulsion Operations missions integration issues and airspace access Coordination multivehicle cooperation and human oversight With contributions from leading experts this volume is intended to be a valuable addition and a useful resource for aerospace manufacturers and suppliers governmental and industrial aerospace research establishments airline and aviation industries

issues affecting the government's ability to carry out the necessary science and engineering programs and the important role of industry universities and states counties and cities in homeland security efforts A long term commitment to homeland security is necessary to make the nation safer and this book lays out a roadmap of how science and engineering can assist in countering terrorism

Right To National Self-Defense Dimitrios Delibasis, 2007-11-19 This ambitious work which took the better part of a decade to produce will be essential reading for all serious defence study students and of absorbing interest to military professionals and lay people concerned with the future of warfare and all aspects of response to military attack Its ultimate aim is to demonstrate that the advent of Cyberwarfare has pushed traditional legal thinking regarding the regulation of forcible action beyond traditional boundaries It attempts to do so by critically analyzing specific characteristics which are inherent to Cyberwarfare such as stealth speed untraceability the availability to State as well as Non State sponsored agents their defiance of traditional borders and an unprecedented potential for destruction all of which have played a major role in making obsolescent traditional legal norms relied upon for the effective regulation of the use of force It follows from the above that no defence system can be effectively regulated especially one as new and unconventional as Information Warfare unless all its specific aspects are explored as deeply as possible The best means to achieve such a purpose have been deemed to be through the inclusion as well as the careful analysis of as many real life examples of Information Warfare operations as possible in order to illustrate the special nature of Information Warfare and its various individual features The examples compiled for inclusion have been selected not on the basis of being the most recent but on the basis of their factual background being as fully known as possible Consequently this book has been constructed around the concept of legality starting with a section outlining currently existing legal norms of individual self defense then applying those norms to Information Warfare Operations including a presentation of existing international legal instruments with provisions applicable to Information Warfare which could serve as additional essential guidelines for a future legal framework specifically crafted to regulate the use of force in cyberspace Last but not least this book sets a paradigm with regard to Cyberwarfare as well as with other methods of warfare which escape the boundaries of the traditional State monopoly of the use of force It ultimately shows the extent to which traditional legal thinking which is shaped around the premise of regulating typical forms of State forcible action when faced with such methods of warfare is totally obsolete

Avoiding Surprise in an Era of Global Technology Advances National Research Council, Division on Engineering and Physical Sciences, Committee on Defense Intelligence Agency Technology Forecasts and Reviews, 2005-05-31. The global spread of science and technology expertise and the growing commercial access to advanced technologies with possible military application are creating potentially serious threats to the technological superiority underpinning U S military strength. Key to dealing with this situation is the ability of the U S intelligence community to be able to provide adequate and effective warning of evolving critical technologies. To assist in performing this task the Technology Warning Division of the Defense Intelligence Agency DIA asked the National Research Council NRC to undertake a study examining technology warning issues. This report provides the first part of that study. It presents an assessment of critical evolving technologies, postulates ways potential adversaries could disrupt these technologies and provides indicators for the intelligence community to determine if such methods are under development. The intention of this report is to establish the foundation for a long term relationship with the technology warning community to support the examination of technology warning issues.

Astride Two Worlds Barton C. Hacker, 2016-05-03. By the middle of the nineteenth century industrialization and military technological innovation were beginning to alter drastically the character and conditions of warfare as it had been conducted for centuries. Occurring in the midst of these far reaching changes the American Civil War can justly be labeled both the last great preindustrial war and the first major war of the industrial age. Industrial capacity attained new levels of military significance as transportation improved but in this as in many other respects the Civil War was distinctly transitional. Smoothbore artillery still dominated the battlefield, horse drawn wagons and pack mules still carried the main logistic burden, seamstresses still outnumbered sewing machine operators. *Astride Two Worlds* addresses the various causes and consequences of technological change for the course and outcome of the American Civil War.
