When Oxford published *Emotion and Adaptation* the landmark 1991 book on the psychology of emotion by internationally acclaimed stress and coping expert Richard Lazarus Contemporary Psychology welcomed it as a brightly shining star in the galaxy of such volumes Psychiatrists psychologists and researchers hailed it as a masterpiece a major breakthrough in our understanding of the emotional process and its central role in our adaptation as individuals and as a species What was still needed however was a book for general readers and health care practitioners that would dispel the myths still surrounding cultural beliefs about emotion and systematically explain the relevance of the new research to the emotional dramas of our everyday lives Now in *Passion and Reason* Lazarus draws on his four decades of pioneering research to bring readers the first book to move beyond both clinical jargon and feel good popular psychology to really explain in plain accessible language how emotions are aroused how they are managed and how they critically shape our views of ourselves and the world around us With his co author writer Bernice Lazarus Dr Lazarus explores the latest findings on the short and long term causes and effects of various emotions including the often conflicting research on stress management and links between negative emotions and heart disease cancer and other aspects of physical and psychological health Lazarus makes a strong case that contrary to common assumption emotions are not irrational our emotions and our analytical thought processes are inextricably linked While not a how to book *Passion and Reason* does describe how readers can interpret what lies behind their own emotions and those of their families friends and co workers and how to manage them more effectively Exploring fifteen emotions in depth from love to jealousy the authors show how the personal meaning we give to the events and conditions of our lives trigger such emotions as anger anxiety guilt and pride They provide fascinating vignettes to frame a biography of each emotion Some are composite case histories drawn from Dr Lazarus's long career but most are stories of people the Lazaruses have known over the years people whose emotional fears conflicts and desires mirror readers own The Lazaruses also offer a special chapter on the diverse strategies of coping people use in managing their emotions and another When Coping Fails on psychotherapy and its approaches to emotional stress and dysfunction from traditional Freudian psychoanalysis to continuing research into relaxation techniques meditation hypnosis and biofeedback Packed with insight and compellingly readable *Passion and Reason* will enrich all readers fascinated by our emotional lives

What Develops in Emotional Development? Michael F. Mascolo, Sharon Griffin, 2013-11-22 The problem of development is central in the study of emotional life for two basic reasons First emotional life so clearly changes dramatically in the early years with new emotional reactions emerging against the backdrop of an increasing sensitivity to context and with self regulation of emotion emerging from a striking dependence on regulatory assistance from caregivers Such changes demand developmental analysis At the same time understanding such profound changes will surely inform our understanding of the nature of development more generally The complexity of emotional change when grasped will reveal the elusive nature of development itself At the outset we know that development is complex We must take seriously what is present at any given phase including the newborn period because a developmental analysis disallows something emerging from nothing Still it is equally nondevelopmental to posit that new forms of new processes were simply present in their precursors Rather development is characterized by transformations in which more complex structures and organization emerge from new integration of prior components and new capacities These new forms and organizations cannot be specified from prior conditions but are due to transactions of the evolving organism with its environment over time They are not simply in the genome and they are not simply conditioned by the environment They are the result of the developmental process

strategies and techniques The structure of this books focuses on an explication of the theory a chapter on basic practice and a chapter on an in depth case study A detailed chapter follows on the practice of individual psychotherapy Although the book is not broken into sections the next four chapters represent a real treasure The authors focus on using REBT in couples family group and marathons sessions Doing REBT with one person is difficult to learn Once the clinician adds more people to the room with different and sometimes competing agendas things get more complicated These chapters will not only help the novice clinician but also the experienced REBT therapists work better in these types of sessions So consider yourself lucky for having picked up this book Reading it will help many people get better From the Foreword by Raymond DiGiuseppe PhD ScD Director of Professional Education Albert Ellis Institute Professor and Chair Department of Psychology St John s University This edition involving a unique collaboration between Albert Ellis and the world s greatest Ellis scholar Windy Dryden modernizes Ellis s pioneering theories The book begins with an explanation of rational emotive behavior therapy as a general treatment model and then addresses different treatment modalities including individual couple family and sex therapy The authors have added material new since the book s original edition on teaching the principles of unconditional self acceptance in a structured group setting With extensive use of actual case examples to illustrate each of the different settings and a new brand new foreword by Raymond DiGiuseppe that sets the book into its 21st century context
