**Introducing Philosophy of Mathematics** Michele Friend, 2014-12-05 What is mathematics about Does the subject matter of mathematics exist independently of the mind or are they mental constructions How do we know mathematics Is mathematical knowledge logical knowledge And how is mathematics applied to the material world In this introduction to the philosophy of mathematics Michele Friend examines these and other ontological and epistemological problems raised by the content and practice of mathematics Aimed at a readership with limited proficiency in mathematics but with some experience of formal logic it seeks to strike a balance between conceptual accessibility and correct representation of the issues Friend examines the standard theories of mathematics Platonism realism logicism formalism constructivism and structuralism as well as some less standard theories such as psychologism fictionalism and Meinongian philosophy of mathematics In each case Friend explains what characterises the position and where the divisions between them lie including some of the arguments in favour and against each This book also explores particular questions that occupy present day philosophers and mathematicians such as the problem of infinity mathematical intuition and the relationship if any between the philosophy of mathematics and the practice of mathematics Taking in the canonical ideas of Aristotle Kant Frege and Whitehead and Russell as well as the challenging and innovative work of recent philosophers like Benacerraf Hellman Maddy and Shapiro Friend provides a balanced and accessible introduction suitable for upper level undergraduate courses and the non specialist

The Oxford Handbook of Truth Michael Glanzberg, 2018-07-04 Truth is one of the central concepts in philosophy and has been a perennial subject of study Michael Glanzberg has brought together 36 leading experts from around the world to produce the definitive guide to philosophical issues to do with truth They consider how the concept of truth has been understood from antiquity to the present day surveying major debates about truth during the emergence of analytic philosophy They offer critical assessments of the standard theories of truth including the coherence correspondence identity and pragmatist theories They explore the role of truth in metaphysics with lively discussion of truthmakers proposition determinacy objectivity deflationism fictionalism relativism and pluralism Finally the handbook explores broader applications of truth in philosophy including ethics science and mathematics and reviews formal work on truth and its application to semantic paradox This Oxford Handbook will be an invaluable resource across all areas of philosophy **Mathematical**

**Knowledge** Mary Leng, Alexander Paseau, Michael Potter, 2007-11-15 What is the nature of mathematical knowledge Is it anything like scientific knowledge or is it sui generis How do we acquire it Should we believe what mathematicians themselves tell us about it Are mathematical concepts innate or acquired Eight new essays offer answers to these and many other questions Written by some of the world's leading philosophers of mathematics psychologists and mathematicians Mathematical Knowledge gives a lively sense of the current state of debate in this fascinating field **Science and Spirituality** Michael Ruse, 2010-03-08 Michael Ruse offers a new analysis of the often troubled relationship between science and religion Arguing against both extremes in one corner the New Atheists in the other the Creationists and their offspring the Intelligent Designers he asserts that science is the highest source of human inquiry Yet by its very nature and its deep reliance on metaphor science restricts itself and is unable to answer basic significant questions about the meaning of the universe and humankind's place within it why is there something rather than nothing What is the meaning of it all Ruse shows that one can legitimately be a skeptic about these questions and yet why it is open for a Christian or member of any faith to offer answers Scientists he concludes should be proud of their achievements but modest about their scope Christians should be confident of their mission but respectful of the successes of science **Oxford Studies in Metaphysics** Karen Bennett, Dean W. Zimmerman, 2017-02-23 Oxford Studies in Metaphysics is the forum for the best new work in this flourishing field Much of the most interesting work in philosophy today is metaphysical in character this series is a much needed focus for it **The Evolution of Modern Metaphysics** A. W. Reduction - Abstraction - Analysis Alexander Hieke,Hannes Leitgeb,2013-05-02 Philosophers often have tried to either reduce disagreeable objects or concepts to more acceptable objects or concepts Reduction is regarded attractive by those who subscribe to an ideal of ontological parsimony But the topic is not just restricted to traditional metaphysics or ontology In the philosophy of mathematics abstraction principles such as Hume s principle have been suggested to support a reconstruction of mathematics by logical means only In the philosophy of language and the philosophy of science the logical analysis of language has long been regarded to be the dominating paradigm and liberalized projects of logical reconstruction remain to be driving forces of modern philosophy This volume collects contributions comprising all those topics including articles by Alexander Bird Jaakko Hintikka James Ladyman Rohit Parikh Gerhard Schurz Peter Simons Crispin Wright and Edward N Zalta     *Ontology After Carnap* Stephan Blatti,Sandra Lapointe,2016 Rudolf Carnap s deflationary approach to ontology is once again attracting considerable interest and support Eleven original essays by leading voices in metametaphysics deepen our understanding of Carnap s contributions to metaontology and explore how his legacy can be mined for insights into the contemporary debate     Necessary Existence Alexander R. Pruss,Joshua L. Rasmussen,2018 Necessary Existence breaks ground on one of the deepest questions anyone ever asks why is there anything Pruss and Rasmussen present an original defence of the hypothesis that there is a necessarily existing being capable of providing an ultimate foundation for the existence of all things     *Meaning Diminished* Kenneth Allen Taylor,2019 Meaning Diminished examines the complex relationship between semantic analysis and metaphysical inquiry Kenneth A Taylor argues that we should expect linguistic and conceptual analysis of natural language to yield far less metaphysical insight into what there is and the nature of what there is than many philosophers have imagined Taking a strong stand against the so called linguistic turn in philosophy Taylor contends that philosophers as diverse as Kant with his Transcendental Idealism Frege with his aspirational Platonism Carnap with his distinction between internal and external questions and Strawson with his descriptive metaphysics have placed too much confidence in the ability of linguistic and conceptual analysis to achieve deep insight into matters of ultimate metaphysics He urges philosophers who seek such insight to turn away from the interrogation of language and concepts and back to the more direct interrogation of reality itself In doing so he maps out the way forward toward a metaphysically modest semantics in which semantics carries less weighty metaphysical burdens and toward a revisionary and naturalistic metaphysics untethered to the a priori analysis of ordinary language     **Frege Explained** Joan Weiner,2011-04-15 What is the number one How can we be sure that  $2 \times 2 = 4$  These apparently simple questions have perplexed philosophers for thousands of years but discussion of them was transformed by the German philosopher Gottlob Frege 1848 1925 Frege pronounced Frey guh believed that arithmetic and all mathematics are derived from logic and to prove this he developed a completely new approach to logic and numbers Joan Weiner presents a very clear outline of Frege

s life and ideas showing how his thinking evolved through successive books and articles

**Frege on Thinking and Its Epistemic Significance** Pieranna Garavaso, Nicla Vassallo, 2014-11-12 Pieranna Garavaso and Nicla Vassallo investigate Gottlob Frege's largely unexplored notion of thinking to provide insight into the roles of language in expressing thoughts and in fostering the development of human knowledge. The analysis will benefit studies of epistemology, logic, philosophy of mind, psychology, and philosophy of language.

Gottlob Frege: Foundations of Arithmetic Gottlob Frege, 2020-07-24 Part of the Longman Library of Primary Sources in Philosophy, this edition of Frege's *Foundations of Arithmetic* is framed by a pedagogical structure designed to make this important work of philosophy more accessible and meaningful for undergraduates.

**Designing for Situated Knowledge Transformation** Nina Bonderup Dohn, Stig Børsen Hansen, Jens Jørgen Hansen, 2019-11-27 How can knowledge developed in one context be put to use in other contexts? How can students learn to do so? How can educators design for learning? These are fundamental challenges to many forms of education. The challenges are amplified in contemporary society where people traverse many different contexts and where contexts themselves are continuously changing. *Designing for Situated Knowledge Transformation* provides a structured answer to these questions through an investigation of the theoretical, empirical, methodological, and pedagogical design aspects which they involve. Raising profound questions about the nature of knowledge, of situativity, and of transfer, transformation, and resituation, it calls for and provides extended empirical studies of the forms of transformation that knowledge undergoes when people find themselves in new contexts while relying on existing knowledge. Considering many avenues of practical application and insight, *Designing for Situated Knowledge Transformation* develops a coherent framework for developing learning designs for knowledge transformation that is crucial in today's educational settings.

*Events, Arguments, and Aspects* Klaus Robering, 2014-03-15 The verb has often been considered the center of the sentence and has hence always attracted the special attention of the linguist. The present volume collects novel approaches to two classical topics within verbal semantics: namely, argument structure and the treatment of time and aspect. The linguistic material covered comes from a broad spectrum of languages including English, German, Danish, Ukrainian, and Australian aboriginal languages, and methods from both cognitive and formal semantics are applied in the analyses presented here. Some of the authors use a variety of event semantics in order to analyze argument structure and aspect, whereas others employ ideas coming from object-oriented programming in order to achieve new insights into the way how verbs select their arguments and how events are classified into different types. Both kinds of methods are also used to give accounts of dynamical aspects of semantic interpretation such as coercion and type shifting.
