Rebirth Of Nature The Greening Of Science And God:

The Rebirth of Nature Rupert Sheldrake, 1994-04-01 Rupert Sheldrake one of the world's preeminent biologists has revolutionized scientific thinking with his vision of a living developing universe one with its own inherent memory In *The Rebirth of Nature* Sheldrake urges us to move beyond the centuries old mechanistic view of nature explaining why we can no longer regard the world as inanimate and purposeless Sheldrake shows how recent developments in science itself have brought us to the threshold of a new synthesis in which traditional wisdom intuitive experience and scientific insight can be mutually enriching

God and Gaia Michael S Northcott, 2022-12-22 *God and Gaia* explores the overlap between traditional religious cosmologies and the scientific Gaia theory of James Lovelock It argues that a Gaian approach to the ecological crisis involves rebalancing human and more than human influences on Earth by reviving the ecological agency of local and indigenous human communities and of nonhuman beings Present day human ecological influences on Earth have been growing at pace since the Scientific and Industrial Revolutions when modern humans adopted a machine cosmology in which humans are the sole intelligent agency The resultant imbalance between human and Earthly agencies is degrading the species diversity of ecosystems causing local climate changes and threatens to destabilise the Earth as a System Across eight chapters this ambitious text engages with traditional cosmologies from the Indian Vedas and classical Greece to Medieval Christianity with case material from Southeast Asia Southern Africa and Great Britain It discusses concepts such as deep time and ancestral time the ethics of genetic engineering of foods and viruses and holistic ecological management Northcott argues that an ontological turn that honours the differential agency of indigenous humans and other kind and that draws on sacred traditions will make it possible to repair the destabilising impacts of contemporary human activities on the Earth System and its constituent ecosystems This book will be of considerable interest to students and scholars of the environmental humanities history and cultural and religious studies

Nature Peter Coates, 2013-04-26 *Nature* is a deceptively simple and ahistorical term suggesting intrinsic unchanging reality Yet nature has a history too both in terms of human attitudes and human impacts Coates outlines the major understandings of nature in the western world since classical times from nature as higher authority to its more recent meaning of threatened physical space and life forms Unlike many others this book places the history of attitudes to nature within the story of human induced changes in the material environment And few others take a supranational perspective or cross the divides between historical eras A distinctive unifying theme is Coates's interest in how green writers over the last thirty years have interpreted our past dealings with nature specifically their efforts to diagnose the roots of contemporary ecological problems and their search for ancestors He concludes with a discussion of the future of nature in the context of developments such as the new ecology global warming advances in genetic engineering and research on animal behaviour Assuming no previous knowledge *Nature* provides the reader with an accessible synthesis and introduction to some of environmental history's central features and debates

confirming its status as one of the most enthralling current pursuits within historical studies This will be essential reading for second year undergraduates and above in cultural history and environmental history as well as to the general reader interested in environmental issues Judgment Day Paul Collins,2010-10 Global warming is now a reality that looms over us and ecological devastation continues apace Now more than ever there is clear recognition that we face a crisis But who is to blame for this crisis In this bold challenging and provocative book Paul Collins argues that Christianity has made a major contribution to the plight of the planet and must come to terms with a disaster that is now also the responsibility of the church Topographies of the Sacred Catherine E. Rigby,2004 Although the British romantic poets notably Blake Wordsworth and Byron have been the subjects of previous ecocritical examinations this text compares English and German literary models of romanticism *Who Guards the Guardians?* Peter Raine,2003 This book attempts to link ecology philosophy and theology through an exploration of a new model of intercultural dialogue Case studies provide practical and theoretical applications which lead to a deeper understanding of not only environmental guardianships but also the fundamental relationship between human beings and nature s being **Green Psychology** Ralph Metzner,1999-06-01 A visionary ecopsychologist examines the rift between human beings and nature and shows what can be done to bring harmony to both the ecosystem and our own minds Shows that the solution to our ecological dilemma lies in our own consciousnesses It is becoming more and more apparent that the causes and cures for the current ecological crisis are to be found in the hearts and minds of human beings For millennia we existed within a religious and psychological framework that honored the Earth as a partner and worked to maintain a balance with nature But somehow a root pathology took hold in Western civilization the idea of domination over nature and this led to an alienation of the human spirit that has allowed an unprecedented destruction of the very systems which support that spirit In *Green Psychology* Ralph Metzner explores the history of this global pathology and examines the ways that we can restore a healing relationship with nature His search for role models takes him from shamanic ceremonies with the Lacandon Maya of Mexico to vision quests in the California desert from the astonishing nature mysticism of Hildegard von Bingen to the Black Goddesses and Green Gods of our pagan ancestors He examines the historical roots of the split between humans and nature showing how first sky god worshipping cultures then monotheisms and finally mechanistic science continued to isolate the human psyche from the life giving Earth His final chapters present a solution showing that disciplines such as deep ecology and ecofeminism are creating a worldview in which the mind of humanity and the health of the Earth are harmoniously intertwined Why Progressives Need God Jonathan Clatworthy,2017-11-24 Environmental destruction poverty in the midst of obscene wealth one war after another Our biggest crises are getting worse Secularism makes this inevitable by denying any moral authority higher than the ruling classes By contrast religious traditions offer accounts of who made us for what purpose and how we should live but whilst some are more constructive than others it is only monotheism defined as divine harmony that provides the philosophical and

ethical framework necessary for people to lead better lives Drawing on cultural analysis political philosophy Christian apologetics and theodicy the author shows why in order to resolve our crises progressives need to reaffirm the goodness of the natural environment as a blessing from a good god

Minding Creation Joanna Leidenhag, 2020-12-10 Are humans the only creatures that can appreciate God's creation What if consciousness is spread more widely across all things This volume examines panpsychism through the lens of Christian doctrine Minding Creation is the first substantial examination of what a panpsychist theory of consciousness implies for key theological debates concerning God's presence and action evolution and the origin of the soul human uniqueness and the environmental crisis Joanna Leidenhag develops a theological panpsychism that is based on an exceptionally wide range of scholarship Minding Creation draws on the theologies of historical figures such as Augustine of Hippo Gottfried von Leibniz and others in order to create a critical and constructive conversation with contemporary analytic philosophers of mind such as Thomas Nagel Galen Strawson and David J Chalmers Leidenhag also discusses key concepts and issues such as emergence theory divine action and ecology She concludes that God created a universe from nothing which is filled with indwelling powers sacramental value and intrinsic experience This is a creation in which the Holy Spirit is internally present at every point a creation that worships God and a creation that human beings must protect and lead in praise

Wild Earth, Wild Soul (2nd Edition) Sky Otter, 2025-04-29 Humankind has the capacity and know how to create Earth honoring cultures in a new way for new times By tapping into ancestral memories taking what's best from the human potential movement and collaborating with present day indigenous peoples we can find our way home Practicing the key ingredients of a lasting culture is an ecstatic way to live This book shows you how

Evolutionary Healing Barbara Sarter, 2002 Taking both a spiritual and philosophical approach this book is a reflection of the author's quest to come to terms with the meaning of human suffering The book integrates ancient and modern philosophies of life with modern scientific discovery The author applies these philosophies with the process of healing and describes evolutionary healing as the evolution of one's consciousness through health and disease

[Alexandria 4](#) David Fideler, 1997-01-01 Alexandria explores the relationships between philosophy cosmology myth and culture the spiritual philosophical and intellectual heritage of the Western World and what the humanities have to contribute to the world today

Reductionism Richard H. Jones, 2000 Reductionism's approach brings together many of the most interesting questions today in philosophy consciousness and computers and in science issues of complexity and self organization It also presents a brief history of how reductionism has developed in Western philosophy and religion with reference to Indian philosophy on certain issues

Animal Passions and Beastly Virtues Marc Bekoff, 2006 An engaging thoughtful look at the science and ethics of research into animal behavior

Jung in the 21st Century Volume Two, [The Postmodern Adventure](#) Steven Best, Douglas Kellner, 2020-12-17 This compelling book explores the challenges to theory politics and human identity that we face on the threshold of the third millennium It follows on the successor of Best and Kellner's two previous books Postmodern

Theory acclaimed as the best critical introduction to the field and The Postmodern Turn which provides a powerful mapping of postmodern developments in the arts politics science and theory In The Postmodern Adventure Best and Kellner analyze a broad array of literary cultural and political phenomena from fiction film science and the Internet to globalization and the rise of a transnational image culture

Seven Experiments That Could Change the World Rupert Sheldrake, 2002-07-01 Examines the realities of unexplained natural phenomenon and provides explanations that push the boundaries of science Looks at animal telepathy and the ability of pigeons to home Proves the point that big questions don't need big science Noted scientist Rupert Sheldrake is a former research fellow of the Royal Society New Edition with an Update on Results How does your pet know when you are coming home How do pigeons home Can people really feel a phantom amputated arm These questions and more form the basis of Sheldrake's look at the world of contemporary science as he puts some of the most cherished assumptions of established science to the test What Sheldrake discovers is that certain scientific beliefs are so widely taken for granted that they are no longer regarded as theories but are seen as scientific common sense In the true spirit of science Sheldrake examines seven of these beliefs Refusing to let intellectual dogmatism influence his search for the truth Sheldrake presents simple experiments that allow the curious and the skeptical to join in his journey of discovery His experiments look at how scientific research is often biased against unexpected patterns that emerge and how a researcher's expectations can influence the results He also examines the taboo of taking pets seriously and explores the question of human extrasensory perception Perhaps most important he questions the notion that science must be expensive in order to achieve important results showing that inexpensive methods can indeed shake the very foundations of science as we know it In this compelling and intelligent book Sheldrake offers no preconceived wisdom or easy answers just an open invitation to explore the unknown create new science and perhaps even change the world

After the Anthropocene Anne Fremaux, 2019-03-25 The environmental crisis is the most prominent challenge humanity has ever had to battle with and humanity is currently failing The Anthropocene or so called age of humans is indeed a period when the survival of humanity has never been so much at risk This book locates itself in the field of critical green political theory Fremaux's analysis of the current environmental crisis calls for us to embrace radical shifts in our modes of being or in other words socially progressive innovations that will be described within the unique framework of Green Republicanism In offering a constructive and emancipatory delineation of what could be considered an ecological civilization that is respectful of its natural environment and social differences this book describes how to shift from an arrogant speciesism and materialistic lifestyle to a post anthropocentric ecological humanism focusing on the good life within ecological limits This new political regime calls for a radical reinvention of our societies a decentering of the humans within our metaphysical worldview and a withdrawal of the capitalist technosphere at the benefit of the biosphere It will require a new economic paradigm that replaces the unsustainable capitalist logic of growth by sustainable degrowth and steady economics Rooted in

ethical thinking and political philosophy this book seeks to offer a concrete roadmap of how sustainable societies can be fostered

International Environmental Law, Policy, and Ethics Alexander Gillespie, 2014-08-21 This second edition of *International Environmental Law Policy and Ethics* revises and expands this groundbreaking study into the question of why the environment is protected in the international arena This question is rarely asked because it is assumed that each member of the international community wants to achieve the same ends However in his innovative study of international environmental ethics Alexander Gillespie explodes this myth He shows how nations like individuals create environmental laws and policies which are continually inviting failure as such laws can often be riddled with inconsistencies and be ultimately contradictory in purpose Specifically he seeks a nexus between the reasons why nations protect the environment how these reasons are reflected in law and policy and what complications arise from these choices This book takes account of the numerous developments in international environmental law and policy that have taken place the publication of the first edition most notably at the 2002 World Summit on Sustainable Development and the 2012 Rio 20 United Nations Conference on Sustainable Development Furthermore it addresses recent debates on the economic value of nature and the problems of the illegal trade in species and toxic waste The cultural context has also been considerably advanced in the areas of both intangible and tangible heritage with increasing attention being given to conservation wildlife management and the notion of protected areas The book investigates the ways in which progress has been made regarding humane trapping and killing of animals and how in contrast the Great Apes initiative and similar work with whales have failed Finally the book addresses the fact that while the notion of ecosystem management has been embraced by a number of environmental regimes it has thus far failed as an international philosophy

Illusion of Separation Giles Hutchins, 2014-10-06 Our modern patterns of thinking and learning are all based on observing a world of things which we think of as separate building blocks This worldview allows us to count and measure objects without their having any innate value it provides neat definitions and a sense of control over life However this approach also sets humans apart from each other and from nature In reality in nature everything is connected in a fluid dynamic way Separateness is an illusion we have created and is fast becoming a dangerous delusion infecting how we relate to business politics and other key areas of our daily reality Giles Hutchins argues that the source of our current social economic and environmental issues springs from the misguided way we see and construct our world With its roots in ancient wisdom this insightful book sets out an accessible easy to follow exploration of the causes of our current crises offering ways to rectify these issues at source and then pointing to a way ahead
