integrators If we inject a patient under intensive care with vitamin C this not only plays a capillary protective role but facilitates the conversion of dopamine to noradrenaline As far as vitamin B6 goes not only is it the most natural of antiemetics but the coenzyme responsible for transforming glutamate as one of the most powerful excitatory mediators into GABA one of the fiercest inhibitors Anesthesiological and intensive care practice require a detailed biochemistry knowledge to avoid onset of complications and or to deal with unexpected events promptly and appropriately The book is intended for anesthesiologists intensivists anesthesia teachers anesthesia trainees and residents
