The Crustacean Nervous System Konrad

Wiese, 2013-04-17 Crustacean preparations have been successfully used for more than 50 years to investigate the principles which enable nerve cells and neural circuitry to perform in a wide variety of functions. The proud record of information of general significance obtained from crayfish and lobster nervous systems testifies that the use of an experimental system precisely matching theoretical and experimental requirements of a measurement is an essential part of the success. In some respects the secondarily diversified vertebrate and mammalian nervous systems pose severe obstacles to experimentation and measurement whereas the crustacean nervous system recommends itself by being composed of individual neurons of unique morphology and physiology which can be used repeatedly in several preparations. Moreover a restricted number of invariantly displayed behaviors enable the experimenter to correlate neuron activity with parts of the behavior easier. Experts use these advantages to focus on a well defined neuron and mechanism and to take a convincing measurement within a minimum amount of time. In this book distinguished neurobiologists the leading experts in the field have joined efforts to present research using crustacean experimental systems. Thus they have contributed comprehensive information regarding a nervous system other than that of vertebrates and mammals that of crustaceans. The accumulated knowledge on the crustacean nervous system shows that it is clearly divergent in evolution but functions in a similar way to neuronal circuitry found in the vertebrate system and can be used to interpret it.

Vitamins and Hormones, 2000-10-05 Under the capable and qualified editorial leadership of Dr Gerald Litwack *Vitamins and Hormones* continues to publish cutting edge reviews of interest to endocrinologists biochemists nutritionists pharmacologists cell biologists and molecular biologists. First published in 1943 *Vitamins and Hormones* is the longest running serial published by Academic Press. In the early days of the Serial the subjects of vitamins and hormones were quite distinct. Now new discoveries have proved that several of the vitamins function as hormones and many of the substances inferred by the title of the serial function in signal transduction processes. Accordingly the Editor in Chief has expanded the scope of the serial to reflect this newer understanding of function structure.

relationships in cellular communication The Editorial Board now reflects expertise in the field of hormone action vitamin action X ray crystal structure physiology and enzyme mechanisms This volume comprises three groups of contributors The first three papers deal with receptors and their actions The second group of three papers are on diabetes and specific hormones The last three papers are presentations on various aspects of vitamins and growth factors Peptides Xiao-Yu Hu,Rui Wang,James P. Tam,2000-09-30 This book represents the achievements of current peptide science research in China over the last two years The International Chinese Peptide Symposium is an academic meeting held every two years and this 5th meeting 5th CPS 98 was held on July 14 17 1998 in Lanzhou Gansu China hosted by Lanzhou University The 5th PCS 98 was represented by over 150 participants including 30 scientists from nine countries outside China This book contains the keynote lectures and the vast majority of the oral presentations It covers the highest level of Chinese peptide research and as such should be of great interest to any peptide scientist Reproductive Biology of Invertebrates, Vol. 12, Part B A S Raikhel,2005-01-01 This book discusses the major accomplishments made in elucidating vitellogenic events at the cellular biochemical and molecular biological levels It is helpful for researchers and students interested in reproduction of invertebrates *The Biology and Fisheries of the Slipper Lobster* Kari L. Lavalli,Ehud Spanier,2007-01-24 Written by international experts The Biology and Fisheries of the Slipper Lobster provides comprehensive coverage of the known biology ecology behavior physiology evolutionary history and genetics of the numerous species in the family Scyllaridae It covers fishing methods and regulations size and composition of catches fisheries management **Behavioural Ecotoxicology** Giacomo Dell'Omo,2002-05-22 Behavioural ecotoxicology is an emerging field dealing with the effects of environmental pollutants on the behaviour of animals Behavioural techniques derived from experimental psychology behavioural pharmacology and neurotoxicology are applied to detect and characterise changes in animals living in the environment exposed to various pollutants Behavioural effects are then interpreted in an ecological context considering the long term relevance of these changes at both the individual and population level **Lobsters: Biology, Fisheries and Aquaculture** E. V. Radhakrishnan,Bruce F. Phillips,Gopalakrishnan Achamveetil,2019-11-28 This book is an important addition to the knowledge of lobster research The book complements other books published on lobster research and management as it focuses on Indian lobster fisheries and aquaculture developments where there have been nearly 350 research papers and reports and 19 PhD awards The book has 15 chapters written by international experts covering many aspects of the biology of a number of spiny and slipper lobster species occurring in India and world oceans with maps illustrating global distribution of spiny lobster families genera and species An updated taxonomy and checklist of marine lobsters the status and management of lobster fisheries in India and Indian Ocean Rim countries and a review of aquaculture research in India and other major countries have also been presented The book is timely as the 2nd International Indian Ocean Expedition IIOE is currently underway 2015 2020 50 years after the original IIOE 1959 1965 with some of the original lobster research on the

biology and distribution of phyllosoma larvae being undertaken on the plankton samples collected during the first IIOE Many of the chapters are contributed by the authors from Central Marine Fisheries Research Institute CMFRI which has been collecting fishery and biological data on lobsters since 1950 when lobster fishing began on a subsistence scale followed by some industrial fishing for lobsters in different parts of India Unfortunately the development of some of these lobster fisheries was followed by overfishing due to lack of enforcement of regulations The book provides a valuable addition to our knowledge of the biology fisheries and aquaculture of spiny and slipper lobsters

Bioenergetics and Energy

Metabolism in Crustaceans Bhaskar L.V.K.S.,2016-02-04 Bioenergetics is the study of balance between energy supply and energy expenditure and requires an examination of physiological processes through which energy is transformed in living organisms Studies on the flow and allocation of energy in biological systems often have as their ultimate goal the construction of a budget describing the partitioning of energy within an individual or population Such budgets are then used to make inference about physiology or ecology in particular explaining why an organism or population does what it is observed to do assuming that energy allocation is the overriding concern Bioenergetic modelling is an alternative method for estimating feeding rates in a natural population These models quantify the relationship between feeding rates and growth relative to temperature body size and activity Bioenergetic models have been applied to address ecological questions in a wide variety of taxa
