Recent Developments In Game Theory International Library Of Critical Writings In Economics S:

Recent Developments in Macroeconomics Edmund S. Phelps,1991 **Recent Developments in Growth Theory**

Daron Acemoglu,2004 This two volume collection examines the major developments in growth theory over the past decade Key papers by leading scholars cover new trends in theoretical and empirical research The first volume shows how new research has improved our understanding of the empirical patterns of economic growth and has posed new challenges for theory The second volume contains articles which have pushed the theory of economic growth in new directions and work which has responded to the challenges raised by empirical research The editor has written an authoritative introduction which presents a comprehensive overview of the selected papers 42 articles dating from 1992 to 2002 *Recent Developments in Economic Methodology* John Bryan Davis,2006

Public Goods, Environmental Externalities and Fiscal Competition Parkash Chander,Jacques Drèze,C. Knox Lovell,Jack Mintz,2007-01-16 Over the last forty years the field of public economics has emerged as a modern successor to public finance It has gained importance on the research agenda of economists and in the curricula of economics departments It has become a diversified field rich in theoretical developments and substantive applications Beyond the traditional concerns with taxation or public goods a number of new concerns have entered the scene concerning for instance public sector pricing the management of public firms social security or federalism A comprehensive presentation of the field extends nowadays beyond the scope of textbooks and requires access to a growing specialised literature The present volume collecting 22 papers published by Henry Tulkens over the period 1978-2003 is offered as an illustration of these new developments The illustration has three dimensions approach subject matters and methods Coming from a single author admittedly assisted by 18 co-authors the different papers are illustrative of an underlying general approach which I like to label operational public economics With these simple words I mean an approach under which issues in public economics are formulated so as to capture essential elements of actual situations Typically this leads to theoretical models more complex than standard textbook formulations It is then up to the public economist to extend the theory as needed to fit the situation *Classics in Game Theory* Harold William Kuhn,2020-11-10

Classics in Game Theory assembles in one sourcebook the basic contributions to the field that followed on the publication of *Theory of Games and Economic Behavior* by John von Neumann and Oskar Morgenstern Princeton 1944 The theory of games first given a rigorous formulation by von Neumann in a paper in 1928 is a subfield of mathematics and economics that models situations in which individuals compete and cooperate with each other In the heroic era of research that began in the late 1940s the foundations of the current theory were laid it is these fundamental contributions that are collected in this volume In the last fifteen years game theory has become the dominant model in economic theory and has made significant contributions to political science biology and international security studies The central role of game theory in economic theory was recognized by the award of the Nobel Memorial Prize in Economic Science in 1994 to the pioneering game theorists John C

Harsanyi John Nash and Reinhard Selten The fundamental works for which they were honored are all included in this volume Harold Kuhn himself a major contributor to game theory for his reformulation of extensive games has chosen eighteen essays that constitute the core of game theory as it exists today Drawn from a variety of sources they will be an invaluable tool for researchers in game theory and for a broad group of students of economics political science and biology The Geography of Competition John R. Miron,2010-03-16 This book provides a comprehensive up to date and expert synthesis of location theory What are the impacts of a firm s geographic location on the locations of customers suppliers and competitors in a market economy How when and why does this result in the clustering of firms in space When and how is society made better or worse off as a result This book uses dozens of locational models to address aspects of these three questions Classical location problems considered include Greenhut Manne Hitchcock Koopmans and Weber Launhardt The book reinterprets competitive location theory focusing on the linkages between Walrasian price equilibrium and the localization of firms It also demonstrates that competitive location theory offers diverse ideas about the nature of market equilibrium in geographic space and its implications for a broad range of public policies including free trade industrial policy regional development and investment in infrastructure With an extensive bibliography and fresh interdisciplinary approach the book will be an invaluable reference for academics and researchers with an interest in regional science economic geography and urban planning as well as policy advisors urban planners and consultants Institutional Economics Stefan Voigt,2019-04-11 A concise and clear introduction to the new institutional economics that summarizes current knowledge whilst addressing its gaps and weaknesses *Recent Developments in Evolutionary Economics* Ulrich Witt,2008 Evolutionary economics is a vital expanding field of research focusing on the incessant transformation of the economy and its driving forces Highlighting a variety of pressing economic problems explaining causes and arriving at innovative remedies this book considers developments in innovations knowledge transfer and industrial dynamics *Whitaker's Books in Print* ,1998 Journal of Economic Literature ,2000 **Recent Developments in Environmental Economics** Michael Hoel,2004 This two volume collection includes the most important and influential contributions to environmental economics during the last ten years The articles cover a broad range of topics and the collection gives an excellent overview over the present state of knowledge in the field These timely volumes will be invaluable to students and researchers alike The Cumulative Book Index ,1992 A world list of books in the English language *Elgar Encyclopedia of Behavioural and Experimental Economics* Swee-Hoon Chuah,Robert Hoffmann,Ananta Neelim,2025-02-12 This Encyclopedia presents a comprehensive account of the complementary forces of behavioural economics a novel field combining psychological insights with analytical economic thinking and experimental economics *Rational Machines and Artificial Intelligence* Tshilidzi Marwala,2021-03-31 Intelligent machines are populating our social economic and political spaces These intelligent machines are powered by Artificial Intelligence technologies such as deep learning They are used in decision making One element of decision making is

the issue of rationality Regulations such as the General Data Protection Regulation GDPR require that decisions that are made by these intelligent machines are explainable Rational Machines and Artificial Intelligence proposes that explainable decisions are good but the explanation must be rational to prevent these decisions from being challenged Noted author Tshilidzi Marwala studies the concept of machine rationality and compares this to the rationality bounds prescribed by Nobel Laureate Herbert Simon and rationality bounds derived from the work of Nobel Laureates Richard Thaler and Daniel Kahneman Rational Machines and Artificial Intelligence describes why machine rationality is flexibly bounded due to advances in technology This effectively means that optimally designed machines are more rational than human beings Readers will also learn whether machine rationality can be quantified and identify how this can be achieved Furthermore the author discusses whether machine rationality is subjective Finally the author examines whether a population of intelligent machines collectively make more rational decisions than individual machines Examples in biomedical engineering social sciences and the financial sectors are used to illustrate these concepts Provides an introduction to the key questions and challenges surrounding Rational Machines including When do we rely on decisions made by intelligent machines What do decisions made by intelligent machines mean Are these decisions rational or fair Can we quantify these decisions and Is rationality subjective Introduces for the first time the concept of rational opportunity costs and the concept of flexibly bounded rationality as a rationality of intelligent machines and the implications of these issues on the reliability of machine decisions Includes coverage of Rational Counterfactuals group versus individual rationality and rational markets Discusses the application of Moore's Law and advancements in Artificial Intelligence as well as developments in the area of data acquisition and analysis technologies and how they affect the boundaries of intelligent machine rationality

The Economics of Migration: Migration and the natives Klaus F. Zimmermann, Thomas K. Bauer, 2002

The Economics of Schooling and School Quality: Efficiency, competition, and policy Eric Alan Hanushek, 2003

The Economics of Intellectual Property: Empirical evidence, trade secrets, and trademarks Ruth Towse, R. W. Holzhauser, 2002 This authoritative four volume collection presents the most important published articles and papers on the economics of intellectual property a subject that is of increasing interest to both economists and lawyers Interest is growing in the relationship of innovation and knowledge to economic growth as well as the challenges to copyright being posed by the new electronic media International in scope this set should be a valuable source of reference to both economists and lawyers concerned with the rapidly developing field of intellectual property

The Psychology of World Equity Markets Werner Franciscus Marcel De Bondt, 2005

Recent Developments in Monopoly and Competition Policy George Norman, 2008 Competition policy aims to prevent anticompetitive agreements and mergers limiting the abusive exercise of market power The formulation and application of this policy presents significant challenges which include showing that proposed mergers are anticompetitive proving that firms are members of cartels and defending apparently restrictive vertical agreements For this insightful volume

the editor has selected key papers which illustrate how far we have come towards meeting these challenges They provide comprehensive developmental coverage of the theory that underpins and justifies competition policy and of the econometric tests that demonstrate its effects and violations This timely book will be an invaluable resource to researchers and practitioners alike with an interest in this important subject

Urban and Regional Economics P. C. Cheshire, Alan W. Evans, 1991

Urban and regional economics in contrast to the rest of economics places great emphasis on distance and location and the importance of spatial relationships Urban economics focuses on the city as a centre of economic activity where productivity is increased through many firms being located close to each other and to decision makers in the public sector But because proximity is important distance within the cities is also important and locations within the city will differ in their economic characteristics At the core of regional economics is the concept of the region as a part of the national economy which has distinct characteristics and which because it is spatially separate develops in a different way to the rest of the economy In turn the trajectory of the national economy is influenced by the economic performance of its regions This major new reference collection prepared by leading authorities in the field presents a blend of classic articles examples of the most recent research and surveys of particular topics It will be an essential source of reference for students instructors and researchers with an interest in urban and regional economics
