Recent Advances in Neurotraumatology Norio Nakamura,Takuo Hashimoto,Masaharu Yasue,2012-12-06 The dawn of neurosurgery can be traced back to the first description preserved in the Edwin Smith papyrus 3000 Be which dealt with head and spinal injury In the course of 5000 years since the first record in Egypt advances in lifestyle and technology have brought about our modern civilized society However as a result of civilization currently the total number of severe head injuries worldwide is believed to exceed 10000000 and the number of severe spinal injuries is believed to be more than 75 000 each year This means that central nervous system injury is not only the oldest topic in neurosurgery but that it is also of critical importance in modern life Taking these problems into consideration the International Neurotraumatology Committee was organized in 1965 as an affiliated Committee of the World Federation of Neurosurgical Societies The first scientific meeting was convened by the Committee in Marseilles in 1970 Nine further meetings were subsequently held in Europe Africa and South America The meeting was first named International Conference on Recent Advances in Neurotraumatology ICRAN by Professor Phillip Harris when the scientific meeting was held in Edinburgh in 1982 The tenth meeting ICRAN 1992 the first one in Asia was held at Karuizawa Japan from September 23rd to 26th 1992 National Library of Medicine Current Catalog National Library of Medicine (U.S.),1971 **Pharmacology of the Skin I** ,2012-12-06 The recent interest in the pharmacology of the skin and the treatment of its diseases has come about for two reasons The first is a realisation

that many aspects of pharmacology can be studied as easily in human skin where they may be more relevant to human physiology and diseases as in animal models Examples of this are the action of various vasoactive agents and the isolation of mediators of inflammation after UV irradiation and antigen induced dermatitis The second reason is the fortuitous realisation that a pharmacological approach to the treatment of skin disease need not always await the full elucidation of etiology and mechanism For example whilst the argument continued unresolved as to whether the pilo sebaceous infection which constitutes acne was due to a blocked duct or to a simple increase in sebum production 13 cis retinoic acid was found quite by chance totally to ablate the disease again whilst cyclosporin fresh from its triumphs in organ transplantation has been found able to suppress the rash of psoriasis it has resuscitated the debate on etiology We are therefore entering a new era in which the pharmacology and clinical pharmacology of skin are being studied as a fascinating new way of exploring questions of human physiology and pharmacology as well as an important step in the development and study of new drugs use of which will improve disease control and at the same time help to define pathological mechanisms
