Mezhiba, Selçuk Köse, Eby G. Friedman, 2010-11-23 This book describes methods for distributing power in high speed high complexity integrated circuits with power levels exceeding many tens of watts and power supplies below a volt It provides a broad and cohesive treatment of power distribution systems and related design problems including both circuit network models and design techniques for on chip decoupling capacitors providing insight and intuition into the behavior and design of on chip power distribution systems Organized into subareas to

provide a more intuitive flow to the reader this second edition adds more than a hundred pages of new content including inductance models for interdigitated structures design strategies for multi layer power grids advanced methods for efficient power grid design and analysis and methodologies for simultaneously placing on chip multiple power supplies and decoupling capacitors The emphasis of this additional material is on managing the complexity of on chip power distribution networks
