*Sea-Ice and Iceberg Sedimentation in the Ocean* Alexander P. Lisitzin, 2012-12-06 In many geological epochs glacial sediments are widespread This type of sedimentation results from the interaction between atmosphere cryosphere hydrosphere and biosphere under temperatures ranging from 0 to 80 Two types of glacial sediments exist those from sea ice and those from icebergs Both types can be subdivided into various subfacies Most widespread in the Northern Hemisphere is the Siberian subfacies characterized by silt and clay and often misinterpreted as sediments of temperate zones This reference book for researchers working on this kind of sediments provides a complete overview of the various glacial deposits in the ocean U.S. Geological Survey Bulletin, 1983 *The Geochemistry of Manganese and Manganese Nodules in the Ocean* G.N. Baturin, 2012-12-06 Manganese nodules were first discovered on the ocean floor 160 miles south west of the Canary Islands on February 18 1803 during the first complex oceanological cruise of the Challenger They surprised researchers by their unusual shape and also by their unusual chemical composition nevertheless for many years afterwards

they were considered merely as one of Nature's exotic marine tricks. After the Second World War a comprehensive investigation of the World Ocean started and new data were obtained on a wide distribution of manganese nodules and their polymetallic composition that made scientists consider nodules as one of the major characteristics of the deep oceanic zone. Recently meaning since the 1960s nodules have been recognized as a potential ore source investigation of which is stimulated by the progressive depletion of land-based mineral resources. Several generations of scientists from various countries have contributed to the problem of exploration of manganese nodules on the ocean floor. Though the problem has been posed it has not been solved yet because it required in its turn a scrutiny of some fundamental aspects such as composition, nature, accretion rate of nodules and retrieval of nodule fields. These problems have been discussed in thousands of papers and larger publications see in particular: Mero 1965, Horn 1972, Morgenstein 1973, Bezrukov 1976, Glasby 1977, Bischoff and Piper 1979, Lalou 1979, Manganese nodules 1979, Varentsov 1980, Cronan 1980, Manganese nodules 1984, 1986.
