Recent Advances In Artificial Neural Networks:

Recent Advances in Artificial Neural Networks L. C. Jain, 2018-05-04 Neural networks represent a new generation of information processing paradigms designed to mimic in a very limited sense the human brain. They can learn, recall, and generalize from training data, and with their potential applications limited only by the imaginations of scientists and engineers, they are commanding tremendous popularity and research interest. Over the last four decades, researchers have reported a number of neural network paradigms; however, the newest of these have not appeared in book form until now. *Recent Advances in Artificial Neural Networks* collects the latest neural network paradigms and reports on their promising new applications. World renowned experts discuss the use of neural networks in pattern recognition, color induction, classification, cluster detection, and more. Application engineers, scientists, and research students from all disciplines with an interest in considering neural networks for solving real world problems will find this collection useful. [Self-Organizing Neural Networks](#) Udo Seiffert, 2001-09-25 The Self Organizing Map (SOM) is one of the most frequently used architectures for unsupervised artificial neural networks. Introduced by Teuvo Kohonen in the 1980s, SOMs have been developed as a very powerful method for visualization and unsupervised classification tasks by an active and innovative community of international researchers. A number of extensions and modifications have been developed during the last two decades. The reason is surely not that the original algorithm was imperfect or inadequate. It is rather the universal applicability and easy handling of the SOM. Compared to many other network paradigms, only a few parameters need to be arranged, and thus also for a beginner, the network leads to useful and reliable results. Nevertheless, there is scope for improvements and sophisticated new developments, as this book impressively demonstrates. The number of published applications utilizing the SOM appears to be unending. As the title of this book indicates, the reader will benefit from some of the latest theoretical developments and will become acquainted with a number of challenging real world applications. Our aim in producing this book has been to provide an up to date treatment of the field of self organizing neural

networks which will be accessible to researchers practitioners and graduated students from diverse disciplines in academics and industry We are very grateful to the father of the SOMs Professor Teuvo Kohonen for supporting this book and contributing the first chapter
