This book is designed for students, researchers, public health officials, and all others interested in increasing their understanding of vaccines. It answers common questions regarding the use of vaccines in the context of a rapidly expanding anti-vaccine environment. This new edition is completely updated and revised with new and unique topics including new vaccines, problems of declining immunization rates, trust in vaccines, vaccine hesitancy, and the social value of vaccines for the community vs the individual child's risk. Provides insights into diseases that could be prevented along with the challenges facing research scientists in the world of vaccines. Gives new ideas about future vaccines and concepts. Introduces new vaccines and concepts. Gives ideas about challenges facing public and private industrial investors in the vaccine area. Discusses the problem of declining immunization rates and vaccine hesitancy. History of Vaccine Development Stanley A. Plotkin, 2011-05-11

Vaccinology: the concept of a science ranging from the study of immunology to the development and distribution of vaccines was a word invented by Jonas Salk. This book covers the history of the methodological progress in vaccine development and to the social and ethical issues raised by vaccination. Chapters include Jenner and the Vaccination against Smallpox, Viral Vaccines, and Ethical and Social Aspects of vaccines. Contributing authors include pioneers in the field such as Samuel L. Katz and Hilary Koprowski. This history of vaccines is relatively short, and many of its protagonists are still alive. This book was written by some of the chief actors in the drama whose subject matter is the conquest of epidemic disease. *Viruses, Pandemics, and Immunity* Arup K. Chakraborty, Andrey Shaw, 2021-02-16 How viruses emerge to cause pandemics, how our immune system combats them, and how diagnostic tests, vaccines, and antiviral therapies work. Throughout history, humans have contended with pandemics. History is replete with references to plagues, pestilence, and contagion, but the devastation wrought by pandemics had been largely forgotten by the twenty-first century. Now the enormous human and economic toll of the rapidly spreading COVID-19 disease offers a vivid reminder that infectious disease pandemics are one of the greatest existential threats to humanity. This book provides an accessible explanation of how viruses emerge to cause pandemics, how our immune system combats them, and how diagnostic tests, vaccines, and antiviral therapies work. Concepts that are a foundation for our public health policies. **Biomedical Innovations to Combat COVID-19** Sergio

*Prophylactic Immunization* Francis J. Zucker, 2012-12-06 It has been said that never in the history of human progress has a better and cheaper method of preventing illness been developed than immunization This is well illustrated by the WHO Expanded Programme on Immunization EPI which in developing countries is now preventing nearly a million deaths annually from measles pertussis and neonatal tetanus and for which there is a commitment by the WHO and UNICEF to protect all children by immunization by the end of the decade This enormous undertaking will be facilitated by the rapid advances in molecular biology and recombinant DNA technology in the understanding of immunological mechanisms and by the production and application of monoclonal antibodies so that the structure and location of important antigenic determinants or epitopes can be determined Chemical synthesis of oligopeptides has been simplified and computer programmes and X ray crystallography provide the tools for the determination of three dimensional structure of proteins so that the structure and location of important antigenic determinants or epitopes can be predicted These techniques have opened the way to the improvement of existing vaccines and to the development and production of new vaccines against infections for which vaccines are not available New vaccines under development include vaccines against hepatitis B hepatitis A malaria vaccines for typhoid cholera rota virus infection and other diarrhoeal diseases leprosy rabies the acquired immune deficiency syndrome AIDS rubella EB virus schistosomiasis and other infections These recent developments are discussed in the volume by internationally recognized experts assembled from several countries
