Extending Medicare Coverage for Preventive and Other Services Institute of Medicine, Division of Health Care Services, Committee on Medicare Coverage Extensions, 2000-05-07 This report which was developed by an expert committee of the Institute of Medicine reviews the first three services listed above It is intended to assist policymakers by providing syntheses of the best evidence available about the effectiveness of these services and by estimating the cost to Medicare of covering them For each service or condition examined the committee commissioned a review of the scientific literature that was presented and discussed at a public workshop As requested by Congress this report includes explicit estimates only of costs to Medicare not costs to beneficiaries their families or others It also does not include cost effectiveness analyses That is the extent of the benefits relative to the costs to Medicare or to society generally is not evaluated for the services examined The method for estimating Medicare costs follows the generic estimation practices of the Congressional Budget Office CBO The objective was to provide Congress with estimates that were based on familiar procedures and could be compared readily with earlier and later CBO estimates For each condition or service the estimates are intended to suggest the order of magnitude of the costs to Medicare of extending coverage but the estimates could be considerably higher or lower than what Medicare might actually spend were coverage policies changed The estimates cover the five year period 2000-2004 In addition to the conclusions about specific coverage issues the report examines some broader concerns about the processes for making coverage decisions and about the research and organizational infrastructure for these decisions It also briefly examines the limits of coverage as a means of improving health services and outcomes and the limits of evidence as a means of resolving policy and ethical questions

diseases are also covered in this book This volume is intended both for practising physicians and surgeons and for biomedical scientists at the graduate postdoctoral levels and is designed to provide the theory behind these various approaches to immunosuppression and to provide state of the art reviews of current developments in each area Kidney and Pregnancy G. Thomson, 2012-12-06 Therapeutic immunosuppression has very broad applications in clinical medicine ranging from prevention and treatment of organ and bone marrow transplant rejection management of various autoimmune disorders e.g. rheumatoid arthritis skin disease and asthma Whereas traditionally only a small repertoire of immunosuppressive agents was available for clinical use recent discoveries have significantly increased the number of approved agents resulting in numerous trials to further evaluate their potential In addition products of the biotechnology industry monoclonal antibodies cytokines cytokine antagonists and other products of genetic engineering that target key molecular pathways in disease pathogenesis have either already made or are on the verge of making an important impact on treatment There is also considerable interest in the potential of cell based therapies particularly hematopoietic stem and dendritic cell therapy of allo and autoimmunity Important recent advances in the immunotherapy of allergic diseases are also covered in this book Gene therapy offers considerable promise for suppressing pathogenic processes in either transplantation or autoimmune disorders The possibility of combining these important new advances to maximize benefit to the patient and to minimize possible untoward effects which are also given extensive coverage in this book is one of the most exciting challenges of contemporary medicine This volume is intended both for practising physicians and surgeons and for biomedical scientists at the graduate postdoctoral levels and is designed to provide the theory behind these various approaches to immunosuppression and to provide state of the art reviews of current developments in each area Each chapter is contributed by one or more experts in the field There was a need to bring this information together in a single volume as much of the key recent developments have been dispersed throughout the biomedical literature largely in specialized journals Since as in the past important
