Receptor Research Methods:

Receptor Research Methods Greenstein, 1995-08-01 Receptor Research Methodshas been designed with the systems worker in mind The emphasis is on how receptors can be used to tackle a problem rather than studying the receptor per se This book describes and evaluates the techniques used in receptor research The range and scope of receptor studies becomes apparent through giving examples of the use of these techniques in overcoming problems of receptor identification in the brain and other tissues Measurement of receptor action is done directly and also indirectly through cellular expression of receptor activation by appropriate ligands The role of the receptor in physiological and pathological states is also discussed in the book *Receptor Binding Techniques* Anthony P. Davenport, 2005-03-25 A comprehensive collection of

readily reproducible methods for studying receptors in silico in vitro and in vivo These cutting edge techniques cover mining from curated databases identifying novel receptors by high throughput screening molecular methods to identify mRNA encoding receptors radioligand binding assays and their analysis quantitative autoradiography and imaging receptors by positron emission tomography PET Highlights include phenotypic characterization of receptors in knockout mice imaging receptors using green fluorescent protein and fluorescent resonance energy transfer and quantitative analysis of receptor mRNA by TaqMan PCR These book equips the researcher with techniques for exploring the unprecedented number of new receptor systems now emerging and the so called orphan receptors whose activating ligand has not been identified **Cell**

Surface Receptors: A Short Course on Theory and Methods Lee E. Limbird, 1995-12-31 Cell Surface Receptors A Short Course on Theory and Methods Second Edition is a primer for the study of cell surface receptors The simplified discussion of methods and their underlying principles removes the usual intimidation caused by the specialized vocabulary or sophisticated mathematics that characterize many of the primary papers in this field In this way the basic concepts become emphasized This volume is a starting point a textbook as well as a manual to which the investigator can return for a refresher course when needed **Receptor Localization** Marjorie Ariano, 1998-07-16 The detection of neurotransmitter receptor locations

and distribution densities within the central nervous system and peripheral tissues is receiving intense attention within the neuroscience research community Neurotransmitter receptors which receive the chemical signals sent from one neuron to another are critical links in a highly complex information processing chain Pinpointing receptor sites and systems is crucial for understanding neurological function as well as dysfunction It is also essential for understanding how receptors process information when impacted by such substances as heroin or nicotine or when affected by neurodegenerative disease Receptor Localization Laboratory Methods and Procedures is the first user friendly guide to the latest techniques and approaches being employed to examine the localization of neurotransmitter receptors in the central nervous system and peripheral tissues It covers detection methods that are applicable to a wide variety of receptor systems ranging from genes and ligands to in vitro receptors in individuals and to numerous receptor subtypes such as nicotine muscarine tachykinins

dopamine adenosine and GABA The standard laboratory recipes or tricks employed in these detection methods are fully discussed as are the advantages and limitations of each procedure With contributions from leading experts and extensively illustrated this book Discusses receptor ligand binding methods using irreversible and reversible compounds Presents antireceptor antisera technology using synthetic peptides and fusion proteins at both the cellular and subcellular resolution levels Examines molecular assessments of receptors Describes in situ hybridization reverse transcriptase PCR and fluorescent in situ transcription Covers new visualization paradigms Includes physiological analysis of receptor function cellular detection in the brain slice and cultured neurons Discusses the use of PET and SPECT to assess in vivo receptor distributions in animals and humans **Receptor Localization Laboratory Methods and Procedures** is an invaluable guide for researchers in the related fields of neurology biochemistry and pharmacology Its lucid descriptions of new detection methods inclusion of experimental examples and emphasis on how these experimental approaches are applicable to particular research areas will appeal to both the experienced researcher and novice investigator

Steroid Receptor Methods

Benjamin A. Lieberman, 2001-08-10 A distinguished team of principal investigators and their associates describe in step by step detail a cross section of the latest research techniques available for studying the endocrine system As a basis for sophisticated biochemical analysis of receptor properties the contributors provide methods for the production and purification of a variety of receptors including progesterone glucocorticoid and androgen Other protocols allow the reader to experiment with DNA binding characteristics hormone binding assays and the use of combinatorial chemistry for drug discovery A series of novel methods utilizing the latest advances in immunochemistry yeast two hybrid screening and fluorescence are included for the detection and analysis of a variety of cellular proteins that influence steroid receptor effectiveness

Guide to Research Techniques in Neuroscience

Matt Carter, Jennifer C. Shieh, 2015-02-27 Neuroscience is by definition a multidisciplinary field some scientists study genes and proteins at the molecular level while others study neural circuitry using electrophysiology and high resolution optics A single

topic can be studied using techniques from genetics imaging biochemistry or electrophysiology Therefore it can be daunting for young scientists or anyone new to neuroscience to learn how to read the primary literature and develop their own experiments This volume addresses that gap gathering multidisciplinary knowledge and providing tools for understanding the neuroscience techniques that are essential to the field and allowing the reader to design experiments in a variety of neuroscience disciplines Written to provide a hands on approach for graduate students postdocs or anyone new to the neurosciences Techniques within one field are compared allowing readers to select the best techniques for their own work Includes key articles books and protocols for additional detailed study Data analysis boxes in each chapter help with data interpretation and offer guidelines on how best to represent results Walk through boxes guide readers step by step through experiments

Nuclear Receptors Mostafa Z. Badr,2021-09-28 Nuclear receptors are ligand activated transcription factors that control numerous biological functions Consequently altering activity of these receptors is proposed and indeed documented to affect many physiological and pathological conditions in experimental animals and humans Thus nuclear receptors have become a major target in the effort to treat numerous diseases This book will shed light on and emphasize intricate processes involved in designing as well as discovering physiological and pharmacological modulators of these important proteins World renowned scientists will share with the reader their professional expertise and extensive experience acquired through decades working with nuclear receptors Chapters address the various means and consequences of modulating nuclear receptor activity will be presented and discussed These modulators cover a wide span of moieties ranging from synthetic chemicals to natural products In addition the classification of these chemicals ranges from pan agonists to selective agonists and inverse agonists to antagonists They also include proteolytic means to obliterate the receptor in the event that modulating its activity through canonical pharmacological agents becomes less effective and or less desirable due to anticipated or experienced toxicities Modulation of receptor activity may also take place in the absence of a ligand or through manipulating the structure of the receptor itself by controlling posttranslational events

Kenakin, J. A.

Angus, 2012-12-06 This the 148th volume of the Handbook of Experimental Pharmacology series focuses on the very core of pharmacology namely receptor theory It is fitting that the originator of receptor pharmacology A J CLARK authored the fourth volume of this series 63 years ago In that volume CLARK further developed his version of receptor theory first described four years earlier in his classic book The Mode of Action of Drugs An examination of the topics covered in volume 4 reveals a striking similarity to the topics covered in this present volume pharmacologists today are still as interested in unlocking the secrets of dose response relationships to reveal the biological and chemical basis of drug action as they were over half a century ago Sections in that 1937 volume such as Curves relating exposure to drugs with biological effects and Implications of monomolecular theory show Clark's keen insight into the essential questions that required answers to move pharmacology forward With the advent of molecular biological cloning of human receptors has come a transformation of receptor pharmacology Thus the expression of human receptors into surrogate host cells helped unlock secrets of receptor mechanisms and stimulus transduction pathways To a large extent this eliminates the leap of faith required to apply receptor activity of drugs tested on animal receptor systems to the human therapeutic arena However a new leap of faith concerning the veracity of the effects found in recombinant systems with respect to natural ones is now required *Principles of*
