Anatomy & Physiology Lindsay Biga, Devon Quick, Sierra Dawson, Amy Harwell, Robin Hopkins, Joel Kaufmann, Mike LeMaster, Philip Matern, Katie Morrison-Graham, Jon Runyeon, 2019-09-26 A version of the OpenStax text *Neuromorphic Olfaction* Krishna C. Persaud, Santiago Marco, Agustin Gutierrez-Galvez, 2016-04-19 Many advances have been made in the last decade in the understanding of the computational principles underlying olfactory system functioning Neuromorphic Olfaction is a collaboration among European researchers who through NEUROCHEM Fp7 Grant Agreement Number 216916 a challenging and innovative European funded project introduce novel computing paradigms and biomimetic artifacts for chemical sensing The implications of these findings are relevant to a wide audience including researchers in artificial olfaction neuroscientists physiologists and scientists working with chemical sensors Developing neuromorphic olfaction from conceptual points of view to practical applications this cross disciplinary book examines The biological components of vertebrate and invertebrate chemical sensing systems The early coding pathways in the biological olfactory system showing how nonspecific receptor populations may have significant advantages in encoding odor intensity as well as odor identity The redundancy and the massive convergence of the olfactory receptor neurons to the olfactory bulb A neuromorphic approach to artificial olfaction in robots Reactive and cognitive search strategies for olfactory robots The implementation of a computational model of the mammalian olfactory system The book s primary focus is on translating aspects of olfaction into computationally practical algorithms These algorithms can help us understand the underlying behavior of the chemical senses in biological systems They can also be translated into practical applications such as robotic navigation and systems for uniquely detecting chemical species in a complex background **Encyclopaedic Dictionary of Psychological Terms** J.C. Banerjee, 1994-12 The book is compiled with a view to making a ready reference book on the subject for both teachers and students The book is an up to date record in so far as general psychology is concerned **Cellular Signal Processing** Friedrich Marks, Ursula Klingmüller, Karin Müller-Decker, 2017-05-17 Cellular Signal Processing offers a unifying view of cell signaling based on the concept that protein interactions act as sophisticated data processing networks that govern intracellular and extracellular communication It is intended for use in signal transduction courses for undergraduate and graduate students working in biology biochemistry bioinformatics and pharmacology as well as medical students The text is organized by three key topics central to signal transduction the protein network its energy supply and its evolution It covers all important aspects of cell signaling ranging from prokaryotic signal transduction to neuronal signaling and also highlights the clinical aspects of cell signaling in health and disease This new edition includes expanded coverage of prokaryotes as well as content on new developments in systems biology epigenetics redox signaling and small non coding RNA signaling Cell Biology of the Secretory Process M. Cantin, 1983-11-15 Brain Receptor Methodologies Pt A Paul J. Marangos, 2012-12-02 Brain Receptor Methodologies Part A General Methods and Concepts Amines and Acetylcholine provides information

pertinent to neurotransmitter and neuromodulator receptors in brain This book explores the methodologies that can be used to address several basic and clinical problems Organized into two sections encompassing 18 chapters this book starts with an overview of the receptor concept which can be validated from indirect evidence obtained in studies of the quantitative aspects of drug antagonism This text then examines the radioligand receptor binding interactions Other chapters consider immunocytochemistry which has a primary role in determining the precise distribution of regulatory peptides to neural and endocrine elements of the diffuse neuroendocrine system The final chapter discusses the use of the radioligand binding procedure for the study of muscarinic receptors which has expanded the area of muscarinic receptor pharmacology

Biochemists pharmacologists physiologists and researchers engaged in the fields of neurobiology and neuroscience will find this book extremely useful

Categories of Human Learning Arthur W. Melton, 2014-05-12 Categories of Human Learning covers the papers presented at the Symposium on the Psychology of Human Learning held at the University of Michigan Ann Arbor on January 31 and February 1 1962 The book focuses on the different classifications of human learning The selection first offers information on classical and operant conditioning and the categories of learning and the problem of definition Discussions focus on classical and instrumental conditioning and the nature of reinforcement comparability of the forms of human learning conditioning experiments with human subjects and subclasses of classical and instrumental conditioning The text then takes a look at the representativeness of rote verbal learning and centrality of verbal learning The publication ponders on probability learning evaluation of stimulus sampling

theory and short term memory and incidental learning Topics include short term retention stimulus variation experiments reinforcement schedules and mean response systematic interpretations and methodological approaches The book then examines the behavioral effects of instruction to learning verbalizations and concepts and the generality of research on transfer functions The selection is highly recommended for psychologists and educators wanting to conduct studies on the categories of human learning

The analysis of practical skills W.T. Singleton, 2013-06-29 The origins of this book are in my first attempts to understand psychology as a post war student in the Cambridge of the late 1940s Sir Frederic Bartlett and his colleagues in the Psychology Department were talking and writing about the concept of the skill as the fundamental unit of behaviour This made entire sense to me but not apparently to very many other people because the movement dwindled rapidly with the retirement of Sir Frederic in 1952 It got lost within performance studies which were essentially behaviouristic and stimulus response in origin a quite different style of thinking from the gestalt approach of skill psychology This is not a simple dichotomy of course and skill psychology does go some way towards the analytic approach in accepting that a science needs to have a basic element a unit from which the complexities of real behaviour can be constructed into which it can be analysed and in terms of which it can be described and understood The trick is to pick the right unit and I think that skills is an appropriate unit for human behaviour Note the plural although these units are elements they are not identical any more than the ninety odd elements of the physical world are identical The issue is sometimes clarified by considering the analogy with the attempt to describe a house The simplest observable elements here are the brick the piece of stone or the piece of wood

Specific Interaction and Biological Recognition Processes Zeno Simon, Nicolae Voiculescu, Ioan Motoc, 1993-06-16 Specific Interaction and Biological Recognition Processes is devoted to two major aspects of biological processes specificity in biological recognition and the recognition processes themselves Topics covered in specificity include the theoretical basis for specificity in biological recognition the thermodynamic and chemical equilibrium background and consideration of the relationship between size of combining sites and specificity The use of semi empirical potentials for calculating interaction energies and the potential of quantum chemistry methods for calculating receptor effector affinities are also discussed The various recognition processes described include DNA replication transcription translation enzymatic reactions transmembrane transport processes mechanisms of action of hormones and other chemical messengers and self nonself recognition in immunology Specific Interaction and Biological Recognition Processes will be a useful reference for molecular biologists biochemists enzymologists immunologists oncologists pharmaceutical researchers and others interested in the topic
