Flavor Perception Andrew J. Taylor, Deborah D. Roberts, 2008-04-15 Unlike other human senses the exact mechanisms that lead to our perception of flavor have not yet been elucidated It is recognised that the process involves a wide range of stimuli which are thought likely to interact in a complex way but since the chemical compounds and physical structures that activate the flavor sensors change as the food is eaten measurements of the changes in stimuli with time are essential to an understanding of the relationship between stimuli and perception It is clear that we need to consider the whole process the release of flavor chemicals in the mouth the transport processes to the receptors the specificity and characteristics of the receptors the transduction mechanisms and the subsequent processing of signals locally and at higher centres in the brain This book provides a state of the art review of our current understanding of the key stages of flavor perception for those working in the flavor field whether in the academic or industrial sector In particular it is directed at food scientists and technologists ingredients suppliers and sensory scientists

Atlas of Arthropod Sensory Receptors Eisuke Eguchi, Yoshiha Tominaga, 1999-02 The great variety in structure and function of arthropod sensory organs is due to the huge number of species living in spatially and temporally different environments and to great variation in behavioral patterns This atlas compiles the electron microscopic anatomy of arthropod sensory

organophotoreceptors chemoreceptors and others in relation to function behavior and environment The authors show how each sensory receptor is finely tuned to detect the necessary information in the arthropods surroundings and how the sensory receptors dynamically change their fine structures according to their functional and adaptational states In each two page spread of the book electron or light micrographs are shown on the right with diagrammatic illustrations and accompanying text on the left in a format that is attractive and easy to understand The atlas thus provides an important bridge between the physiology and morphology of arthropod sensory receptors
