Pigeon Guided Missiles James Moore,Paul Nero,2011-08-31 During the Second World War an American behavioural psychologist working with pigeons discovered that the birds could be trained to recognise an object and to peck at an image of it when loaded into the nose cone of a missile these pecks could be translated into adjustments to the guidance fins steering the projectile to its target Pigeon Guided Missiles reveals this and other fascinating tales of daring plans from history destined to change the world we live in yet which ended in failure or even disaster Some became the victims of the eccentric figures behind them others succumbed to financial and political misfortune and a few were just too far ahead of their time Discover why the great groundnut scheme cost British taxpayers 49 million why the bid to build Minerva a whole new country in the Pacific Ocean sank and why the first Channel Tunnel started in 1881 over a century before the one we know today hit a dead end **Pigeon Trouble** Hoon Song,2011-06-06 Pigeon Trouble chronicles a foreign born birdphobic anthropologist s venture into the occult craft of pigeon shooting in the depths of Pennsylvania s anthracite coal country Though initially drawn by a widely publicized antipigeon shoot protest by animal rights activists the author quickly finds himself traversing into a territory much stranger than clashing worldviews an uncanny world saturated with pigeon matters both figuratively and literally What transpires is a sustained meditation on self reflexivity as the author teeters at the limit of his investigation his own fear of birds The result is an intimate portrayal of the miners world of conspiracy theory anti Semitism and whiteness all inscribed one way or another by pigeon matters and seen through the anguished eyes of a birdphobe This bestiary experiment through a phobic gaze concludes with a critique on the visual trope in anthropology s self reflexive turn An ethnographer with a taste for philosophy Song writes in a distinctive descriptive and analytical style obsessed with his locale and its inhabitants constantly monitoring his own reactions and his impact on others but always teasing out larger implications to his subject **Subnature** David Gissen,2012-03-20 We are conditioned over time to regard environmental forces such as dust mud gas smoke debris weeds and insects as inimical to architecture Much of today s discussion about sustainable and green design revolves around efforts to clean or filter out these primitive elements While mostly the direct result of human habitation these subnatural forces are nothing new In fact our ability to manage these forces has long defined the limits of civilized life From its origins architecture has been engaged in both fighting and embracing these so called destructive forces In Subnature David Gissen author of our critically acclaimed Big and Green examines experimental work by today s leading designers scholars philosophers and biologists that rejects the idea that humans can somehow recreate a purely natural world free of the untidy elements that actually constitute nature Each chapter provides an examination of a particular form of subnature and its actualization in contemporary design practice The exhilarating and at times unsettling work featured in Subnature suggests an alternative view of natural processes and ecosystems and their relationships to human society and architecture R Sie n s Mosquito Bottleneck house in Trinidad uses a

skin that actually attracts mosquitoes and moves them through the building while keeping them separate from the occupants In his building designs the architect Philippe Rahm draws the dank air from the earth and the gasses and moisture from our breath to define new forms of spatial experience In his Underground House Mollier House and Omnisport Hall Rahm forces us to consider the odor of soil and the emissions from our body as the natural context of a future architecture Cero 9 s design for the Magic Mountain captures excess heat emitted from a power generator in Ames Iowa to fuel a rose garden that embellishes the industrial site and creates a natural mountain rising above the city s skyline Subnature looks beyond LEED ratings green roofs and solar panels toward a progressive architecture based on a radical new conception of nature

Ancient DNA Elizabeth D. Jones,2022-01-01 The untold story of the rise of the new scientific field of ancient DNA research and how Jurassic Park and popular media influenced its development Fun and thought provoking Jones builds a wry often wise study of science as a very human endeavor She makes a powerful case that ancient DNA research feeds off media attention as much as the media feeds off it Victoria L Herridge Nature Ancient DNA research the recovery of genetic material from long dead organisms is a discipline that developed from science fiction into a reality between the 1980s and today Drawing on scientific historical and archival material as well as original interviews with more than fifty researchers worldwide Elizabeth Jones explores the field s formation and explains its relationship with the media by examining its close connection to de extinction the science and technology of resurrecting extinct species She reveals how the search for DNA from fossils flourished under the influence of intense press and public interest particularly as this new line of research coincided with the book and movie Jurassic Park Ancient DNA is the first account to trace the historical and sociological interplay between science and celebrity in the rise of this new research field In the process Jones argues that ancient DNA research is more than a public facing science it is a celebrity science **The Passenger Pigeon** Errol Fuller,2014-09-15 A haunting beautifully illustrated memorial to this iconic extinct bird At the start of the nineteenth century Passenger Pigeons were perhaps the most abundant birds on the planet numbering literally in the billions The flocks were so large and so dense

that they blackened the skies even blotting out the sun for days at a stretch Yet by the end of the century the most common bird in North America had vanished from the wild In 1914 the last known representative of her species Martha died in a cage at the Cincinnati Zoo This stunningly illustrated book tells the astonishing story of North America's Passenger Pigeon a bird species that like the Tyrannosaur the Mammoth and the Dodo has become one of the great icons of extinction Errol Fuller describes how these fast agile and handsomely plumaged birds were immortalized by the ornithologist and painter John James Audubon and captured the imagination of writers such as James Fenimore Cooper Henry David Thoreau and Mark Twain He shows how widespread deforestation the demand for cheap and plentiful pigeon meat and the indiscriminate killing of Passenger Pigeons for sport led to their catastrophic decline Fuller provides an evocative memorial to a bird species that was once so important to the ecology of North America and reminds us of just how fragile the natural world can be Published in the centennial year of Martha's death *The Passenger Pigeon* features rare archival images as well as haunting photos of live birds *The Pigeon News*, 1965
