Fernholz, Stephan Morgenthaler, 2014-07-14 This collection of essays brings together many of the world's most distinguished statisticians to discuss a wide array of the most important recent developments in data analysis The book honors John W Tukey one of the most influential statisticians of the twentieth century on the occasion of his eightieth birthday Contributors

some of them Tukey's former students use his general theoretical work and his specific contributions to Exploratory Data Analysis as the point of departure for their papers. They cover topics from pure data analysis such as gaussianizing transformations and regression estimates and from applied subjects such as the best way to rank the abilities of chess players or to estimate the abundance of birds in a particular area. Tukey may be best known for coining the common computer term bit for binary digit but his broader work has revolutionized the way statisticians think about and analyze sets of data. In a personal interview that opens the book he reviews these extraordinary contributions and his life with characteristic modesty, humor, and intelligence. The book will be valuable both to researchers and students interested in current theoretical and practical data analysis and as a testament to Tukey's lasting influence. The essays are by Dhammika Amaratunga, David Andrews, David Brillinger, Christopher Field, Leo Goodman, Frank Hampel, John Hartigan, Peter Huber, Mia Hubert, Clifford Hurvich, Karen Kafadar, Colin Mallows, Stephan Morgenthaler, Frederick Mosteller, Ha Nguyen, Elvezio Ronchetti, Peter Rousseeuw, Allan Seheult, Paul Velleman, Maria Pia Victoria, Feser, and Alessandro Villa.
