Epstein,2013-10-22 Progress in Psychobiology and Physiological Psychology Volume 9 reviews developments in the fields of psychobiology and physiological psychology with emphasis on selected areas of research relating brain mechanisms and behavior Topics covered range from sensory perceptual systems in mammals to behavioral modulation of visual responses in monkeys Brain pathways for vocal learning in birds are also examined along with neural mechanisms in taste aversion learning Comprised of seven chapters this volume begins with an insightful account of the evolution of concepts regarding cortical organization relevant to perception in mammals Studies of single unit activity in awake behaving monkeys are then presented followed by a discussion on the neural control of song in birds In particular the brain pathways involved in vocal learning in birds are defined anatomically and physiologically including the presence of hemispheric dominance and the sensitivity to steroid hormones Subsequent chapters focus on the response characteristics of the cells in the forebrain that give stimuli their significance for associative learning the neuropsychological mechanisms of taste aversion learning and the psychobiology of thirst The final chapter is devoted to the pineal gland and its anatomical connection to the eyes together with pineal hormones polypeptides and proteins This book should appeal to biologists psychologists and physiologists **National Library of Medicine Current Catalog** National Library of Medicine (U.S.),1974 First multi year cumulation covers six years 1965 70 **The Pineal Gland and Cancer** C. Bartsch,H. Bartsch,D.E. Blask,D.P. Cardinali,W.J.M. Hrushesky,Dieter Mecke,2012-12-06 The link between the pineal gland and cancer is a rapidly emerging research field due to promising experimental and clinical trials with melatonin The pineal gland acts as a transducer of environmental light to regulate rhythmic processes including reproductive function in seasonally breeding animals and the entrainment of circadian rhythms such as the sleep wake cycle in man This book elucidates the physiological significance of the pineal gland and surveys phenomena and mechanisms of pineal tumor interaction at the neuroendocrine neuroimmune neural and molecular levels Yet unidentified low molecular weight pineal substances with tumor inhibiting capacity a possible involvement of melatonin in electromagnetic field effects on cancer and the oncotherapeutic potential of melatonin are also addressed The encouraging results should incite further research to elucidate the exact nature of the link between the pineal gland and cancer for the benefit of patients **Hormonal Correlates of Behavior** Basil E. Eleftheriou,Richard L. Sprott,2012-12-06 Our aim in this volume as in Volume I Hormonal Correlates of Behavior A Life Span View has been to provide a critical assessment of the state of behavioral endocrinology as well as the more usual summary of extant data Each contributor was asked to probe the strengths and weaknesses of his area as candidly as possible As a result we hope the reader will find this Volume useful as a reference source and as an honest evaluation of our present knowledge of the interaction between hormones and behavior R

Chemical Signals in Vertebrates 3 Dietland Müller-Schwarze, Robert M. Silverstein, 2013-11-21 The first volume in this series appeared in 1977 the second in 1980 From these volumes and the present one some research trends in chemical communication can be perceived In the 1977 volume studies on 13 animal taxa were reported In the present volume the number is 25 This taxonomic diversification of research since the first volume of this series demonstrates the wide variety of ecological adaptations although no new general principles of chemical communication have emerged Further more divergences in chemical communication below the species level have become more apparent In general more sophisticated observations and techniques have led to greater awareness of the complexities in chemical communication As such awareness has also developed in the field of insect chemical communication there has been a corresponding increase in the identification of the chemical compounds involved However in the vertebrates no such correlation exists in the present volume conclusive chemical identifications of semiochemicals are remarkable by their paucity **The Third Eye** Richard M. Eakin, 2023-12-22 **The Behavioral Significance of Color** Edward H. Burt, Jr., 2018-02-19 Prior to publication the study of animal coloration was plagued by fanciful speculations post hoc explanations and untestable hypotheses This title originally published in 1979 draws together widely scattered research into the coloration of animals formulates predictive hypotheses to account for color documents the accuracy of many of these hypotheses and suggests directions for future research The book grew out of a symposium The Behavioral Significance of Color at the 1977 meeting of the Animal Behavior Society and presents evidence concerning patterns of coloration and their influence on animal behaviour and interaction Physical principles of radiation are discussed in Chapter 1 followed in subsequent chapters by an examination of the physiological functions of animal coloration e g thermoregulation hydroregulation abrasion resistance extraretinal photoreception Treatment of coloration that affects the animal s visibility to other animals opens with a masterful overview of theories of color vision and its occurrence throughout the animal kingdom Chapter 6 explores the role of color vision and

fruit color in the selection of food by wild primates with comments on the coevolution of fruiting trees and their primate customers Dr Jack P Hailman addresses the elusive concept of conspicuousness He summarizes a strategy for calculating conspicuous coloration based on measurements in natural habitats Experiments naturalistic observations and anecdotes of optical communication are exceedingly numerous Chapters 8 and 9 review these data and suggest general principles of inter and intraspecific optical communication Each chapter is enhanced by the critical evaluations of Drs C Richard Tracy and W J Hamilton III In closing the editor discusses coloration as it affects an animal s own vision e g black eyelines to reduce glare Most significantly the book emphasizes the need for a balanced scientifically rigorous approach to the question of evolution of animal coloration It is an important source for anyone contemplating or currently involved in research in this field of investigation
