*Piecewise Linear Modeling and Analysis* Domine Leenaerts, Wim M.G. van Bokhoven, 2013-03-09 Piecewise Linear PL approximation of non linear behaviour is a well known technique in synthesis and analysis of electrical networks However the PL description should be efficient in data storage and the description should allow simple retrieval of the stored information Furthermore it would be useful if the model description could handle a large class of piecewise linear mappings Piecewise Linear Modeling and Analysis explains in detail all possible model descriptions for efficiently storing piecewise linear functions starting with the Chua descriptions Detailed explanation on how the model parameter can be obtained for a given mapping is provided and demonstrated by examples The models are ranked to compare them and to show which model can handle the largest class of PL mappings All model descriptions are implicitly related to the Linear Complementarity Problem and most solution techniques for this problem like Katzenelson and Lemke are discussed according to examples that are explained in detail To analyse PL electrical networks a simulator is mandatory Piecewise Linear Modeling and Analysis provides a detailed outline of a possible PL simulator including pseudo programming code Several simulation domains like transient AC and distortion are discussed The book explains the attractive features of PL simulators with respect to mixed level and mixed signal simulation while paying due regard also to hierarchical simulation Piecewise Linear Modeling and Analysis shows in detail how many existing components in electrical networks can be modeled These range from digital logic and analog basic elements such as transistors to complex systems like Phase Locked Loops and detection systems Simulation results are also provided The book concludes with a discussion on how to find multiple solutions for PL functions or networks Again the most common techniques are outlined using clear examples Piecewise Linear Modeling and Analysis is an indispensable guide for researchers and designers interested in network theory network synthesis and network analysis

**Nostradamus 2014: Prediction, Modeling and Analysis of Complex Systems** Ivan Zelinka, Ponnuthurai Nagarathnam Suganthan, Guanrong Chen, Vaclav Snasel, Ajith Abraham, Otto RöSSLer, 2014-06-09. The prediction of behavior of complex systems, analysis and modeling of its structure is a vitally important problem in engineering, economy, and generally in science today. Examples of such systems can be seen in the world around us, including our bodies and, of course, in almost every scientific discipline, including such exotic domains as the earth's atmosphere, turbulent fluids, economics, exchange rate, and stock markets, population growth, physics, control of plasma, information flow in social networks, and its dynamics, chemistry,

and complex networks To understand such complex dynamics which often exhibit strange behavior and to use it in research or industrial applications it is paramount to create its models For this purpose there exists a rich spectrum of methods from classical such as ARMA models or Box Jenkins method to modern ones like evolutionary computation neural networks fuzzy logic geometry deterministic chaos amongst others This proceedings book is a collection of accepted papers of the Nostradamus conference that has been held in Ostrava Czech Republic in June 2014 This book also includes outstanding keynote lectures by distinguished guest speakers Ren Lozi France Ponnuthurai Nagaratnam Suganthan Singapore and Lars Nolle Germany The main aim of the conference was to create a periodical possibility for students academics and researchers to exchange their ideas and novel research methods This conference establishes a forum for presentation and discussion of recent research trends in the area of applications of various predictive methods
