Creating the conditions that foster student success in college has never been more important. As many as four fifths of high school graduates need some form of postsecondary education to be economically self sufficient and manage the increasingly complex social political and cultural issues of the 21st century. But about 40 percent of those who start college fail to earn a degree within 6 or 8 years, an unacceptably low number. This report examines the complicated array of social economic cultural and educational factors related to student success in college, defined as academic achievement, engagement in educationally purposeful activities, satisfaction, acquisition of desired knowledge, skills and competencies, persistence, and attainment of educational objectives. Although the trajectory for academic success in college is established long before students matriculate, most institutions can do more than they are at present to shape how students prepared for college and they they engage in productive activities after they arrive. This is the 5th issue of the 32nd volume of the Jossey Bass series ASHE Higher Education Report. Each monograph is the definitive analysis of a tough higher education problem based on thorough research of pertinent literature and institutional experiences. Topics are identified by a national survey. Noted practitioners and scholars are then commissioned to write the reports, with experts providing critical reviews of each manuscript before publication. Selling Hope and College Alex

Posecznick, 2017-04-25. It has long been assumed that college admission should be a simple matter of sorting students according to merit, with the best heading off to the Ivy League and highly ranked liberal arts colleges and the rest falling naturally into their rightful places. Admission to selective institutions where extremely fine distinctions are made is characterized by heated public debates about whether standardized exams, high school transcripts, essays, recommendation letters, or interviews best indicate which prospective students are worthy. And then there is college for everyone else. But what goes into less selective college admissions in an era when everyone feels compelled to go regardless of preparation or life goals? Ravenwood College, where Alex Posecznick spent a year doing ethnographic research, was a small private nonprofit institution dedicated to social justice and serving traditionally underprepared students from underrepresented minority groups. To survive in the higher education marketplace, the college had to operate like a business and negotiate complex categories of merit while painting a hopeful picture of the future for its applicants. Selling Hope and College is a snapshot of a particular type of institution as it goes about the business of producing itself and justifying its place in the market. Admissions staff members were burdened by low enrollments and worked tirelessly to fill empty seats even as they held on to the institution's special spirit. Posecznick documents what it takes to keep a mediocre institution open and running and the struggles, tensions, and battles that members of the community tangle with daily as they carefully walk the line between empowering marginalized students and exploiting them. The Sustainability Puzzle Alice Schmidt, Claudia

Winkler,2021-06-16 We've reached a turning point and the stakes are high. Will we succeed in halting climate change and biodiversity loss and in finally securing health, wealth and wellbeing for all? There is cause for optimism. We already have the tools we need to create a better, more sustainable and inclusive future. Before we apply these tools, we need to take a step back, look at the whole picture and reach beyond the silos in which we live and work. We need to zoom out before we zoom in to tackle specific sustainability issues. By working together in good faith, we can solve the sustainability puzzle by addressing social, economic and environmental issues simultaneously. Alice Schmidt and Claudia Winkler are pragmatic thinkers and doers in achieving sustainability. Drawing on their combined 40 years of experience in addressing issues of social justice, climate action, the circular economy, technology and sustainable business, they show why we should be optimistic about sustainable transformation and offer constructive insights on building back better. *The African American Student's Guide to STEM Careers* Robert T. Palmer, Andrew T. Arroyo, Alonzo Flowers, 2016-12-05 This book comprehensively reviews the factors that facilitate access and success of Black students in STEM majors in higher education and it shares compelling testimonies from Black STEM professionals that will help inspire the next generation of Black scientists and engineers. Most experts agree that America's success depends on having a workforce that is highly prepared in STEM areas. Unfortunately, students of color continue to be underrepresented in higher education and specifically in completing degrees and entering careers within the STEM fields. This book supports African American students as well as all students who are interested in STEM careers, providing information on the top colleges with STEM-related programs, particularly those that best support racially diverse students, practical advice for preparing for entrance into STEM programs, and inspirational stories of successful African Americans in STEM-related careers. Authored by three educators expert in the areas of academic development of African Americans and minorities in STEM and higher education, *The African American Student's Guide to STEM Careers* focuses on preparing Black students for STEM from K-12 through graduate school. Readers will more fully appreciate the importance of STEM, recognize why more Black students need to be more actively engaged in these disciplines, and understand how to prepare Black students for success in STEM throughout the educational pipeline. **Assessment Clear and Simple** Barbara E.
