Pilot Judgement And Crew Resource Management:

Pilot Judgment and Crew Resource Management Richard S. Jensen, 2017-03-02 This is the first comprehensive book on pilot judgment. It provides a clear understanding of pilot judgment, emphasizing how it can be applied to improving safety in aviation. The author brings together a rich store of personal flying experiences combined with a strong base of personal academic research to support the concepts presented. The book gives not only a strong emphasis to the application of judgment to aviation but also lays particular stress on the principles needed in how to learn, teach, and evaluate judgment. For pilots, the main benefits to be gained from the book will be a foundation of knowledge and teaching to enable them to make better, safer decisions. For flight instructors, it teaches how to teach and evaluate judgment in flight students. In addition to pilots and flight instructors, the readership obviously includes aviation classroom instructors, scientists doing aviation-related research, and aviation safety specialists.

Crew Resource Management Training Norman MacLeod, 2021-05-05 The book provides a data-driven approach to real-world crew resource management (CRM) applicable to commercial pilot performance. It addresses the shift to a systems-based resilience thinking that aims to understand how worker performance provides a buffer against failure. This book will be the first to bring these ideas together. Taking a competence-based approach offers a more coherent, relevant approach to CRM. The book presents relevant real-world examples of the concepts and outlines a change in thinking around pilot performance and data interpretation that is overdue. Airlines, pilots, and aviation industry professionals will benefit from the insights into organisational design and alternative approaches to training. **FEATURES:** Approaches CRM from a competence-based perspective. Uses a systems model to bring coherence to CRM. Includes a chapter on using blended learning and virtual reality to deliver CRM. Features research on work-life balance, morale, pilot fatigue, and link to error. Operationalises resilience engineering in a crew context. Cockpit Resource Management Earl L.

Wiener, Barbara G. Kanki, Robert L. Helmreich, 1993 Cockpit resource management (CRM) has gained increased attention from the airline industry in recent years due to the growing number of accidents and near misses in airline traffic. This discussion of CRM includes crew coordination, communication, and resources both within and outside the cockpit.

Approach to Aviation Accident Analysis Douglas A. Wiegmann, Scott A. Shappell, 2017-12-22 Human error is implicated in nearly all aviation accidents yet most investigation and prevention programs are not designed around any theoretical framework of human error. Appropriate for all levels of expertise, the book provides the knowledge and tools required to conduct a human error analysis of accidents regardless of operational setting i.e. military, commercial or general aviation. The book contains a complete description of the Human Factors Analysis and Classification System (HFACS) which incorporates James Reason's model of latent and active failures as a foundation. Widely disseminated among military and civilian organizations, HFACS encompasses all aspects of human error including the conditions of operators and elements of supervisory and organizational failure. It attracts a very broad readership. Specifically, the book serves as the main textbook for a course in aviation accident investigation taught by one of the authors at the University of Illinois. This book will also be used in courses designed for military safety officers and flight surgeons in the U.S. Navy, Army and the Canadian Defense Force who currently utilize the HFACS system during aviation accident investigations. Additionally, the book has been incorporated into the popular workshop on accident analysis and prevention provided by the authors at several professional conferences world wide. The book is also targeted for students attending Embry Riddle Aeronautical University which has satellite campuses throughout the world and offers a course in human factors accident investigation for many of its majors. In addition, the book will be incorporated into courses offered by Transportation Safety International and the Southern California Safety Institute. Finally, this book serves as an excellent reference guide for many safety professionals and investigators already in the field.

QF32 Richard de Crespigny, 2012-08-01 QF32 is the award winning bestseller from Richard de Crespigny, author of the forthcoming *Fly Life: Lessons from the Cockpit of QF32*. On 4 November 2010, a flight from Singapore to Sydney came within a knife edge of being one of the world's worst air disasters. Shortly after leaving Changi Airport, an explosion shattered Engine 2 of Qantas flight QF32, an Airbus A380, the largest and most advanced passenger plane ever built. Hundreds of pieces of shrapnel ripped through the wing and fuselage, creating chaos as vital flight systems and back-ups were destroyed or degraded. In other hands, the plane might have been lost with all 469 people on board, but a supremely experienced flight crew led by Captain Richard de Crespigny managed to land the crippled aircraft and safely disembark the passengers after hours of nerve-racking effort. Tracing Richard's life and career up until that fateful flight, QF32 shows exactly what goes into the making of a top-level airline pilot and the extraordinary skills and training needed to keep us safe in the air. Fascinating in its detail and vividly compelling in its narrative, QF32 is the riveting blow-by-blow story of just what happens when things go badly wrong in the air, told by the captain himself. Winner of ABIA Awards for Best General Non-fiction Book of the Year 2013 and Indie Awards Best Non-fiction 2012. Shortlisted ABIA Awards Book of the Year 2013.

Crew Resource Management Eduardo Salas, Eleana Edens, Katherine A. Wilson, 2017-05-15 Crew Resource Management (CRM) training was first introduced in the late 1970s as a means to combating an increased number of accidents.

in which poor teamwork in the cockpit was a significant contributing factor Since then CRM training has expanded beyond the cockpit for example to cabin crews maintenance crews health care teams nuclear power teams and offshore oil teams Not only has CRM expanded across communities it has also drawn from a host of theories from multiple disciplines and evolved through a number of generations Furthermore a host of methodologies and tools have been developed that have allowed the community to better study and measure its effect on team performance and ultimately safety Lacking however is a forum in which researchers and practitioners alike can turn to in order to understand where CRM has come from and where it is going This volume part of the Critical Essays on Human Factors in Aviation series proposes to do just that by providing a selection of readings which depicts the past present and future of CRM research and training

Human Factors in the Training of Pilots Jefferson M. Koonce, 2002-05-23 In this educational yet entertaining text Jeff Koonce draws on his 44 years of pilot experience and 31 years as a professor of psychology and human factors engineering in addressing the questions of how to apply sound human factors principles to the training of pilots and to one's personal flying The author discusses principles of human factors

Human Performance and Limitations in Aviation R. D. Campbell, Michael Bagshaw, 2008-04-15 Human error is cited as a major cause in over 70% of accidents and it is widely agreed that a better understanding of human capabilities and limitations both physical and psychological would help reduce human error and improve flight safety This book was first published when the UK Civil Aviation Authority introduced an examination in human performance and limitations for all private and professional pilot licences Now the Joint Aviation Authorities of Europe have published a new syllabus as part of their Joint Aviation Requirements for Flight Crew Licensing The book has been completely revised and rewritten to take account of the new syllabus The coverage of basic aviation psychology has been greatly expanded and the section on aviation physiology now includes topics on the high altitude environment and on health maintenance Throughout the text avoids excessive jargon and technical language There is no doubt that this book provides an excellent basic understanding of the human body its limitations the psychological processes and how they interact with the aviation environment I am currently studying for my ATPL Ground Exams and I found this book to be an invaluable aid It is equally useful for those studying for the PPL and for all pilots who would like to be reminded of their physiological and psychological limitations General Aviation June 2002

Decision Making in Aviation Don Harris, 2017-07-05 Decision making pervades every aspect of life people make hundreds of decisions every day The vast majority of these are trivial and without a right or wrong answer In some respects there is also nothing extraordinary about pilot decision making It is only the setting that is different the underlying cognitive processes are just the same However it is the context and the consequences of a poor decision which serve to differentiate aeronautical decision making Decisions on the flight deck are often made with incomplete information and while under time pressure The implications for inadequate performance is much more serious than in many other professions Poor decisions are implicated in over half of all aviation accidents This volume contains key papers published over the last 25 years

providing an overview of the major paradigms by which aeronautical decision making has been investigated Furthermore decision making does not occur in isolation It is a joint function of the flight tasks knowledge equipment on the flight deck and other stressors In this volume of collected papers works from leading authors in the field consider all these aspects of aeronautical decision making

Human Performance on the Flight Deck Don Harris,2016-12-05 Taking an integrated systems approach to dealing exclusively with the human performance issues encountered on the flight deck of the modern airliner this book describes the inter relationships between the various application areas of human factors recognising that the human contribution to the operation of an airliner does not fall into neat pigeonholes The relationship between areas such as pilot selection training flight deck design and safety management is continually emphasised within the book It also affirms the upside of human factors in aviation the positive contribution that it can make to the industry and avoids placing undue emphasis on when the human component fails The book is divided into four main parts Part one describes the underpinning science base with chapters on human information processing workload situation awareness decision making error and individual differences Part two of the book looks at the human in the system containing chapters on pilot selection simulation and training stress fatigue and alcohol and environmental stressors Part three takes a closer look at the machine the aircraft beginning with an examination of flight deck display design followed by chapters on aircraft control flight deck automation and HCI on the flight deck Part four completes the volume with a consideration of safety management issues both on the flight deck and across the airline the final chapter in this section looks at human factors for incident and accident investigation The book is written for professionals within the aviation industry both on the flight deck and elsewhere for post graduate students and for researchers working in the area

Air Traffic Control: Human Performance Factors Anne R. Isaac, Bert Ruitenberg, 2017-03-02 From the Foreword by Captain Daniel Maurino ICAO Air Traffic Control will remain a technology intensive system People controllers must harmoniously interact with technology to contribute to achieve the aviation system's goals of safe and efficient transportation of passengers and cargo This book considers human error and human factors from a contemporary and operational perspective and discusses the parts as well as the whole I hope you enjoy reading it as much

as I did The motivation for writing this book comes from the author's long standing belief that the needs of Air Traffic Service personnel are inadequately represented in the aviation literature There are few references to air traffic control in many of the books written for pilots and about pilots and this is also observed at the main international conferences In line with the ICAO syllabus for human factors training for air traffic controllers the book covers the main issues in air traffic control with regard to human performance physiology including stress fatigue and shift work problems psychology with emphasis on human error and its management social psychology including issues of communication and working in teams the environment including ergonomic principles and working with new technologies and hardware and software issues including the development of documentation and procedures and a study of the changes brought about by advanced technologies Throughout the text there are actual examples taken from the air traffic control environment to illustrate the issues discussed A full bibliography is included for those who want to read beyond these issues It has been written for all in air traffic services from ab initio to the boardroom it is important that the men and women in senior management positions have some knowledge and awareness of the fundamental problems that limit and enhance human performance
