Now in *Lecturing Birds on Flying* Pablo Triana offers a powerful indictment on the trustworthiness of financial theory explaining in jargon free plain English how malfunctions in these quantitative machines have wreaked havoc in our real world Triana first analyzes the fundamental question of whether financial markets can in principle really be solved mathematically He shows that the markets indeed cannot be tamed with equations presenting a long and powerful list of obstacles to prove his point maverick unlawful human actions rule the markets unexpected and unimaginable events shape the markets and historical data is not necessarily a trustworthy guide to the future of the markets The author then examines the sources of origin of many prevalent theories and mathematical dictums He details how the field of financial economics evolved from a descriptive discipline to an abstract one dedicated to technically concocting professors own versions of how such a world should work He goes on to explain how Wall Street and other financial centers became eager employers of scientists and how scientists became eager employees of financial firms Triana concludes with an in depth discussion of the most significant historical episodes of theory caused real life market malaise with a strong emphasis on the current credit crisis In the end *Lecturing Birds on Flying* calls for the radical substitution of good old fashioned common sense in place of mathematical decision making and the restoration to financial power of those who are completely unchained to the iron ball of classroom obtained qualifications
