Understanding Meaningful Environments Karina Moraes Zarzar, Ali Guney,2008 The real power for security applications will come from the synergy of academic and commercial research focusing on the specific issue of security Special constraints apply to this domain which are not always taken into consideration by academic research but are critical for successful security applications large volumes techniques must be able to handle huge amounts of data and perform on line computation scalability algorithms must have processing times that scale well with ever growing volumes automation the analysis process must be automated so that information extraction can run on its own ease of use everyday citizens should be able to extract and assess the necessary information and robustness systems must be able to cope with data of poor quality

missing or erroneous data The NATO Advanced Study Institute ASI on Mining Massive Data Sets for Security held in Italy September 2007 brought together around ninety participants to discuss these issues This publication includes the most important contributions but can of course not entirely reflect the lively interactions which allowed the participants to exchange their views and share their experience The bridge between academic methods and industrial constraints is systematically discussed throughout This volume will thus serve as a reference book for anyone interested in understanding the techniques for handling very large data sets and how to apply them in conjunction for solving security issues

*Material and Representation in Architecture* Gail Peter Borden, 2014-02-03 This book examines the interrelationship of representational methods and material systems as fundamental drivers of the design process Identifying four primary categories of representational logics point line surface mass each category is illustrated through four precedent projects that deploy iterative material sensibilities As a collection this text provides a comprehensive categorization of the architectural design process Through the comprehensive definition of categorical typologies it illustrates the collective capability of this conceptual methodology By unpacking projects through their specific design devices the collective analysis reveals the impact of material techniques and methods of representation as a generative tool Broad in scope it identifies and uniformly analyses some of the most significant projects from the last century including UK Pavilion Shanghai Heatherwick Studio Shanghai China Gatehouse Office dA Beijing China Maison Colonial Jean Prouve France Africa de Young Museum Herzog and de Meuron California USA Montreal Expo 67 Buckminster Fuller Montreal Canada Jean Marie Tjibou Cultural Center RPBW Noumea Indonesia House III Peter Eisenman New York USA Barcelona Pavilion Mies van der Rohe Barcelona Spain Tel Aviv Scott Cohen Tel Aviv Israel Los Manantiales Felix Candella Mexico City Mexico Yokahama Terminal FOA Yokahama Japan Pantheon Rome Italy Tres Grand Bibliotheque Rem Koolhaas OMA Paris France Brother Claus Field Chapel Peter Zumthor Switzerland Embryonic House Greg Lynn Richly illustrated with consistent clear and precise line drawings the book presents a series of iconic precedents through a unique analytical and graphic sensibility

**History and Precedent in Environmental Design** Anatol Rapoport, 2013-06-29 This book is about a new and different way of approaching and studying the history of the built environment and the use of historical precedents in design However although what I am proposing is new for what is currently called architectural history both my approach and even my conclusions are not that new in other fields as I discovered when I attempted to find supporting evidence In fact of all the disciplines dealing with various aspects of the study of the past architectural history seems to have changed least in the ways I am advocating There is currently a revival of interest in the history of architecture and urban form a similar interest applies to theory vernacular design and culture environment relations After years of neglect the study of history and the use of historical precedent are again becoming important However that interest has not led to new approaches to the subject nor have its bases been examined This I try to do In so doing I discuss a more rigorous and I would argue a more valid way of looking at historical data and hence of using such data in a theory of the built environment and as precedent in environmental design Underlying this is my view of Environment Behavior Studies CEBS as an emerging theory rather than as data to help design based on current theory Although this will be the subject of another book a summary statement of this position may be useful

**Poetics of Architecture** Anthony C. Antoniades, 1992-11-11 In order for a book to succeed in presenting a theory of architecture it must address aspects of imagination and creativity as well as the channels one can use to achieve truly significant architectural design Poetics of Architecture explores the fundamental theories of Modern and Postmodern design

and attempts to reconcile all that is worthwhile in these two movements into a new inclusivist attitude toward architecture Anthony C Antoniades looks at the many intangible and tangible channels one can harness in creating architectural design By opening up architecture to the full range of creative influences he tries to help readers produce designs that are richer on spatial sensual spiritual and environmental levels Some of the intangible channels to creativity explored in the book include fantasy metaphor the paradoxical and metaphysical the primordial and untouched poetry and literature and the exotic and multicultural Among the tangible channels covered are history and the study of precedents mimesis and literal interpretation geometry materials and the role of nature The author presents rich and imaginative discussions of these various channels explaining which were favored during the Modern and Postmodern movements and clarifying his theoretical analyses through the use of many vivid examples tables and illustrations Included among the examples in the volume are many distinguished projects and theories by a wide range of noted architects such as Asplund Aalto Utzon Pikiotis Barragin Pietila Predock and Legorreta who are latecomers to the attention of the media Antoniades also provides fascinating material on the study of architectural biographies as a means of achieving an all inclusive creativity in architectural design Highly original yet based on solid principles Poetics of Architecture will help architects designers and students increase their versatility and creativity in the studio It will also deepen their understanding and appreciation of the creative process and its many influences

New Essentialism Gail Peter Borden,2018 New Essentialism Material Architecture examines how architecture engages material to create effect through five critical historical thresholds represented by analytical precedents coupled with projective experimental design project families Unpacking the fundamental methodologies of their geometric material spatial and effectual sensibilities each threshold builds an examination that reveals the essential methods and processes of design illustrating the basis for the argument for a New Essentialism its characteristics methods and the sensibilities that mark its definition

**The Architecture of Persistence** David J. Fannon,M. Laboy,P. Wiederspahn,2021 The Architecture of Persistence argues that continued human use is the ultimate measure of sustainability in architecture and that expanding the discourse about adaptability to include continuity as well as change offers the architectural manifestation of resilience Why do some buildings last for generations as beloved and useful places while others do not How can designers today create buildings that remain useful into the future While architects and theorists have offered a wide range of ideas about building for change this book focuses on persistent architecture the material spatial and cultural processes that give rise to long lived buildings Organized in three parts this book examines material longevity in the face of constant physical and cultural change connects the dimensions of human use and contemporary program and discusses how time informs the design process Featuring dozens of interviews with people who design and use buildings and a close analysis of over a hundred historic and contemporary projects the principles of persistent architecture introduced here address urgent challenges for contemporary practice while pointing towards a more sustainable built environment in the future The Architecture of Persistence Designing

for Future Use offers practitioners students and scholars a set of principles and illustrative precedents exploring architecture's unique ability to connect an instructive past a useful present and an unknown future
